II. What are the risks and what could I get in return?

Summary Risk Indicator

Lower Risk

Higher Risk

The risk indicator assumes you keep the product until the end of the recommended holding period (August 6, 2018). You cannot end your product early. You will have to pay significant extra costs to end your product early.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from future performance at a very high level, and poor market conditions are very likely to impact the capacity of the product manufacturer to pay you. **Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.** In some circumstances you may be required to make payments to pay for losses. **The total loss you may incur may be significant.** This product does not include any protection from future market performance so you could incur significant losses. If we are not able to pay you what is owed, you could incur significant losses.

Performance Scenarios

Scenarios		96 days (Recommended holding period)

	Average return/loss over nominal amount each year	-64.42 % p.a.
Unfavourable scenario	What you might get back or pay after costs	EUR -635.61

Favourable scenario	What you might get back or pay after costs	EUR 479.86
	Average return/loss over nominal amount each year	19.51 % p.a.

This table shows the money you could get back or pay over the next 96 days, under different scenarios, assuming a nominal value of EUR 10,000.00. The scenarios shown illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and how long you keep the product. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you. This product cannot be ended. This means it is difficult to estimate how much you would get if you end before the end of the recommended holding period. You will either be unable to end early or you will have to pay high costs or make a large loss if you do so. The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

III. What happens if Citi Private Bank is unable to pay out?

If the product manufacturer becomes insolvent or otherwise unable to deliver under the product, investors should in the worst case be prepared to suffer a total loss of their investment. Your loss would not be covered by any investor compensation or guarantee scheme.

IV. What are the costs?

The Reduction in Yield (RIY) shows what impact the total costs you pay will have on the performance of the product. The total costs take into account one-off, ongoing and incidental costs. The amounts shown here are the cumulative costs of the product itself, for the recommended holding period. They include potential early exit penalties. The figures assume a nominal value of EUR 10,000.00. The figures are estimates and may change in the future.

Cost over time

The person selling you or advising you about this product may charge you other costs. If so, this person will provide you with information about these costs, and show you the impact that all costs will have on your investment over time.

Nominal amount EUR 10,000.00

Scenarios	If you end at the recommended holding period
Total costs	EUR 10.00
Impact on return (RIY) per year	0.37 % p.a.

Composition of costs

The table below shows:

- the impact each year of the different types of costs on the performance of the product at the end of the recommended holding period;
- the meaning of the different cost categories.

This table shows the impact on return per year

One-off costs	Entry costs	0.37 % p.a.	The impact of the costs you pay when entering your investment. The impact of the costs already included in the price. This is the most you will pay and you could pay less. This includes the cost of distribution of your product.
	Exit costs	n.a.	The impact of the costs of exiting your investment when it matures.
Ongoing costs	Portfolio transaction costs	n.a.	The impact of the costs of us buying and selling underlying investments for the product.
	Other ongoing costs	n.a.	The impact of the costs we take each year for managing your investments and the costs presented in Section II.

V. How long should I hold it and can I take my money out early?

Recommended holding period: 96 days

The product is designed to be held until the maturity date. It does not provide for an early termination right of the investor other than the termination right upon occurrence of certain extraordinary events set out above under "Term" in Section I, if any. Therefore, investors should be prepared to stay invested for the term of the product.
