

Pacific Investment Management Company LLC

Pacific Investment Management Company LLC (“PIMCO”) is an investment adviser registered with the U.S. Securities and Exchange Commission (“SEC”). You should be aware that investment advisory services are different from brokerage services and the fees charged will vary. It is important for you to understand those differences. Free and simple tools are available to research firms and financial professionals at <https://www.Investor.gov/CRS>, which also provides educational materials about broker-dealers, investment advisers, and investing.

What investment services and advice can you provide me?

We offer discretionary and non-discretionary investment advisory services to retail investors. You may have a direct account with us or you may be a client in a wrap fee program for which we serve as investment adviser. We offer advice regarding a range of investment strategies, as selected by each client. We typically have investment discretion, which means that we make the investment decisions in your account, without consulting you. We also offer non-discretionary advice, which means that we make investment recommendations and you make the decision to buy or sell the investment. When authorized by you, we may invest your assets in funds, such as mutual funds, collective investment trusts, or ETFs that we or our affiliates manage (together, “Funds”). Our direct accounts have investment minimums, which range from \$75,000 to \$250 million, depending on the investment strategy. Wrap fee account minimums vary by wrap program. As part of our standard services, we monitor discretionary client accounts on an ongoing basis. Wrap accounts are also regularly monitored per our standard services and the terms of our agreement with you or the sponsor (the “Sponsor”). We do not monitor non-discretionary client accounts. **You may find additional information about our services in our Form ADV, Part 2A brochure (Items 4 and 7).** Please visit <https://adviserinfo.sec.gov/firm/brochure/104559> where you can view PIMCO’s complete Part 2A brochure.

Conversation Starters. Ask your financial professional—

- Given my financial situation, should I choose an investment advisory service? Why or why not?
- How will you choose investments to recommend to me?
- What is your relevant experience, including your licenses, education and other qualifications? What do these qualifications mean?

What fees will I pay?

If you have a discretionary account, you will typically pay a fee that is a percentage of the assets in your account. In some cases, we may offer a performance fee option. Fees for non-discretionary accounts are separately negotiated. We typically bill clients for our advisory fees on a quarterly basis. Accounts with more assets generally pay higher total fees, so we have an incentive to encourage you to increase the assets in your account. You will also pay transaction fees to broker-dealers on any transactions in your account, including commissions or other transaction costs that are included in the price of a fixed income security that we buy or sell for your account (“Trading Costs”). Your custodian (a third-party firm that holds your assets) will charge you additional fees.

If you participate in a wrap program, you will pay a fee to the Sponsor that includes certain services, such as custody and Trading Costs, as provided in your agreement with the Sponsor. The wrap fee you pay to the Sponsor will not include Trading Costs if we place orders with broker-dealers other than the Sponsor. For fixed income strategies, we typically do not trade with the Sponsor when buying and selling bonds for your wrap account, and the third-party broker-dealers charge Trading Costs, which are in addition to the wrap fee. You will not get the full benefit of your wrap fee when we do not trade with your Sponsor. In some instances, these services may be obtained at a lower aggregate cost if purchased separately.

For discretionary accounts, if we invest your assets in a Fund, you will pay your share of the Fund’s fees and expenses, which are shown in the Fund’s prospectus. Some Fund fees are waived by PIMCO, as provided in our agreement with you. If we invest your wrap account assets or discretionary account assets in funds that are not managed by PIMCO or its affiliates, you will pay your proportionate share of those fees and expenses.

You will pay fees and costs whether you make or lose money on your investments. Fees and costs will reduce any amount of money you make on your investments over time. Please make sure you understand what fees and costs you are paying.

You may find additional information about our fees and costs in our Form ADV, Part 2A brochure (Item 5). Please visit <https://adviserinfo.sec.gov/firm/brochure/104559> where you can view PIMCO's complete Part 2A brochure.

Conversation Starters. Ask your financial professional—

- Help me understand how these fees and costs might affect my investments. If I give you \$10,000 to invest, how much will go to fees and costs, and how much will be invested for me?

What are your legal obligations to me when acting as my investment adviser? How else does your firm make money and what conflicts of interest do you have?

When we act as your investment adviser, we have to act in your best interest and not put our interest ahead of yours. At the same time, the way we earn fees creates some conflicts with your interests. You should understand and ask us about these conflicts because they can affect the investment advice we provide you. Here are some examples to help you understand what this means.

PIMCO Funds. We sometimes make recommendations or otherwise invest client assets in Funds that we or our affiliates manage. We earn advisory fees and supervisory and administrative fees for these Funds, and for certain Funds, performance fees. We have a financial incentive to use or recommend these Funds. While we rebate certain of these fees for our direct accounts, as stated in our agreement with you, we have a conflict of interest because we have an incentive to (i) favor these Funds to earn fees, (ii) select Funds that have higher fees, (iii) increase our assets under management or (iv) otherwise support the Funds.

Trade Allocation. PIMCO manages accounts that have different fee arrangements. This can create an incentive for us to favor certain accounts over others when allocating trades so that we may earn higher fees.

Conversation Starters. Ask your financial professional—

- How might your conflicts of interest affect me, and how will you address them?

For additional information on our conflicts of interest, please see Item 11 of PIMCO's Part 2A brochure, which can be found at <https://adviserinfo.sec.gov/firm/brochure/104559>.

How do your financial professionals make money?

Financial professionals are paid a salary and receive a benefits package. At our discretion, they can also earn an annual bonus and deferred compensation incentives based on our performance. This creates an incentive for financial professionals to recommend products and services for which we receive greater compensation.

Do you or your financial professionals have legal or disciplinary history?

Yes. Visit <https://www.Investor.gov/CRS> for a free and simple search tool to research us and our financial professionals.

Conversation Starters. Ask your financial professional—

- As a financial professional, do you have any disciplinary history? For what type of conduct?

Additional Information

For additional information about our investment advisory services, please visit www.pimco.com. If you would like additional information or to request an up-to-date copy of this document, please contact your PIMCO Account Representative, your wrap program sponsor or you may call us at (949) 720-6000.

Conversation Starters. Ask your financial professional—

- Who is my primary contact person? Is he or she a representative of an investment adviser or a broker-dealer? Who can I talk to if I have concerns about how this person is treating me?

Form ADV Part 2A Brochure

March 31, 2025

This brochure provides information about the qualifications and business practices of Pacific Investment Management Company LLC ("PIMCO").

If you have any questions about the contents of this brochure, please contact us at (949) 720-6000. The information in this brochure has not been approved or verified by the U.S. Securities and Exchange Commission (the "SEC") or by any state securities authority.

Additional information about PIMCO is also available on the SEC's website at www.adviserinfo.sec.gov.

Registration does not imply a certain level of skill or training.

Item 2. SUMMARY OF MATERIAL CHANGES

This brochure is the annual update to the PIMCO Form ADV Part 2A. The updates to this Form ADV Part 2A since the last update filed in March 2024 include the following (terms as defined herein): (i) added discussion regarding funding accounts and proprietary investments; (ii) enhancements to discussions regarding PIMCO's customized target date strategy, model portfolios, and types of clients; (iii) new risk factors relating to escheatment, new investment vehicles, synthetic convertible securities, and unsecured obligations; (iv) enhancements to risk factors relating to counterparty risk, artificial intelligence, climate change and severe weather, collateralized debt obligations and other structured products, EU's Central Securities Depositories Regulation, cyber security, derivatives, digital assets, emerging markets, ESG, foreign investments, futures/cleared swaps, general economic and market risk, government and regulatory risk, inflation and deflation, investments in the People's Republic of China, sanctions, anti-corruption, anti-money laundering and related considerations, pooled investment vehicles and pass-through entities, real estate, and state law restrictions on ownership of real property; and (v) enhancements to discussions regarding conflicts of interests related to financing, the trade allocation process, voting and governance rights, co-investments, trade errors, and voting client securities. In addition, PIMCO routinely makes updates throughout the brochure to improve and clarify the description of its business practices, compliance policies, and procedures, as well as to respond to evolving industry best practices.

ITEM 4. Advisory Business

Our Firm

Pacific Investment Management Company LLC ("PIMCO," "we," or "us") is a leading global investment management firm founded in Newport Beach, California in 1971. We are an indirect subsidiary of Allianz SE ("Allianz"), a global financial services company based in Germany, although our operations are separate from and autonomous of Allianz. Please see Appendix A for a list of PIMCO's principal owners.

PIMCO's Global Offices. As a global investment manager, PIMCO uses the resources of our offices around the world to provide portfolio management, research and trading services for client accounts (each, a "Client" or "Account"). The PIMCO entity with which a client has contracted supervises any services provided by one or more of our global offices.

Our People. PIMCO was founded on the philosophy that hard work, high standards of excellence and the desire to be the best are critical to our success. Biographical and other information relating to certain key investment management personnel is contained in the supplement to this brochure.

Assets Under Management

As of December 31, 2024, PIMCO managed approximately \$2,990,162,012,917 of regulatory assets under management and \$1,947,654,450,641 of net assets under management, respectively. For purposes of calculating our regulatory AUM, we included assets that we manage on behalf of Allianz-affiliated companies as well as the assets of clients contracted with the non-U.S. investment advisers affiliated with PIMCO listed in Appendix C (the "Non-U.S. Advisers"), except PIMCO Prime Real Estate GmbH, which files reports with the SEC as an Exempt Reporting Adviser, and its subsidiary PIMCO Prime Real Estate Asia Pacific Pte. Ltd.

Our Services

Our Organization. Since 1971 we have provided discretionary investment management services to clients throughout the world. PIMCO began as a manager of

fixed income portfolios and has evolved to include active management of equities, open-end funds, closed-end funds (exchange listed funds and interval funds), exchange traded funds ("ETFs"), collective investment trusts ("CITs"), private investment funds (such as private equity-style funds and hedge funds) and structured products. PIMCO is a provider of solutions services, offering a menu of sophisticated strategies, analysis and advice for clients in all types of market conditions. While these services have greatly evolved over time, one thing that has not changed is our mission to provide the highest quality investment management services.

As a leading provider of discretionary investment management services, PIMCO employs a broad range of portfolio management tools that seek to appropriately manage risk, hedge exposures, and seek returns consistent with Client guidelines. We have considerable experience in an array of global investment strategies, which include both fixed income and equity strategies. As markets evolve, we will seek to employ new strategies and manage new products. Additional information regarding our strategies, methods of analysis, and the material risks associated with our significant strategies is included under Item 8, "Methods of Analysis, Investment Strategies and Risk of Loss."

Portfolio Management. PIMCO provides investment management services to Clients through a global team of investment professionals.

The investment professionals employed by PIMCO are devoted primarily to the management of Accounts. Client portfolio management teams include portfolio managers, risk managers, research analysts, economists, and others who assist in the development of investment ideas, implementation of portfolio strategies and risk analysis. PIMCO has an Investment Committee comprised of senior portfolio managers and headed by PIMCO's Group Chief Investment Officer and Chief Investment Officers. The Investment Committee determines key portfolio management strategies. Guided by these key strategies, individual portfolio management teams then make investment decisions for their respective Accounts.

Separate Account Management. The client management team, which acts as the bridge between separate account Clients (each, a "Separate Account") and their PIMCO portfolio managers, is devoted to client service. One of the advantages of this approach is that it permits our portfolio managers to concentrate the vast majority of their time to investment activities. Client management professionals work closely with the portfolio management team to implement each Separate Account's investment guidelines. Client management professionals also are responsible for day-to-day servicing of Separate Accounts and play an integral role in helping to develop investment ideas and strategies in conjunction with the portfolio management team.

Business Management. Our business management team provides the infrastructure for the operation of the firm and includes the Legal and Compliance, Human Resources, Operations, Finance, and Technology Departments. One key function of the business management team is to manage back-office operations. We have outsourced certain back-office operations to State Street Investment Manager Solutions LLC and its affiliates (together, "SSIMS"), a firm specializing in back-office trade processing, settlement and accounting operations. This enables us to focus the majority of our people and resources on what we do best: managing investments and servicing clients. SSIMS administers the following functions, on our behalf, including, but not limited to: (i) coordinating asset transitions; (ii) assisting with the maintenance and update of our security master database; (iii) processing trades; (iv) communicating trade and settlement directives to the relevant account's custodian banks; and (v) facilitating failed trade and overdraft compensation claims. While SSIMS provides our back-office services, we actively supervise all work performed on behalf of our Clients in connection with these services.

PIMCO may in-source or outsource certain processes or functions in connection with a variety of services that it provides in its administrative or other capacities without notice to Clients. Depending upon the nature of the services and subject to applicable law and agreements,

fees associated with in sourced or outsourced services will be borne by PIMCO or, subject to applicable offering documents or investment management agreements, a Client. In addition, PIMCO, and not Clients, could benefit from certain fee reduction arrangements under certain such agreements. Please refer to "Payments Made to Service Providers and Other Third Parties" for additional information.

Asset Management. PIMCO provides asset management services related to the post-acquisition and ongoing management and monitoring of certain investments through a dedicated team of asset managers. Such activities include, among others: assisting with asset and liability servicing, such as seeking to ensure that all principal and interest is received for loan agreements and that debt obligations are satisfied; monitoring assets pledged as collateral for financing; and supporting asset servicing functions as appropriate. In certain instances, senior members of the asset management division may function both as asset managers and portfolio managers.

Non-Discretionary Services. In addition to our discretionary investment management services, we also provide non-discretionary investment management and non-discretionary advisory services certain clients.

Some clients grant PIMCO limited discretion with respect to the assets in their Account ("Non-Discretionary Accounts"). For example, a Client may require that PIMCO seek the Client's approval prior to any buy or sell transactions in the Client's Account. In these instances, our ability to transact on behalf of the Client will be limited. Therefore, a Non-Discretionary Account may not be able to obtain comparable discounts that we may negotiate on aggregated transactions, it may pay higher transaction costs or brokerage commissions, and we may be unable to achieve the most favorable execution depending on the circumstances of the transaction and the limitations of the Account. Similarly, a Non-Discretionary Account may not be able to participate in certain investment opportunities. For these reasons, a Non-Discretionary Account may achieve lower returns compared to a comparable Account that grants PIMCO full discretion. For more information on non-

discretionary Accounts, please see "Potential Conflicts Relating to Non-Discretionary Advisory Services" in Item 11.

Other Services. PIMCO engages in related business activities, including licensing of intellectual property with respect to, for example, the development of methodologies for compiling and calculating a benchmark index. We license or sell our intellectual property rights in such methodologies to third parties who use such methodologies to create and issue investment products that are based on such indices and/or correlated to the underlying components of such indices. We also license or sell our intellectual property rights in such methodologies to third parties who use such methodologies to hedge or reinsure such investment products or develop a benchmark index or use such methodologies to calculate performance on a financial product. In certain cases, such third parties pay us a portion of the subscription or licensing fees they receive in connection with such indices, or a percentage of the total assets allocated to investment products that are based on or reference such indices. In connection with the licensing of our indices, we will in certain cases receive a fee for entering into certain hedging transactions on behalf of the licensee of the index (or another third-party) or for permitting third parties to engage in such hedging transactions.

Other examples of related business activities include, among other things, entities owned by or otherwise affiliated with us or owned by certain Clients that we manage or sponsor, including Clients that are pooled investment vehicles ("PIMCO Funds" or "Funds"), providing loan servicing, consulting, legal, accounting, tax, due diligence, asset management or other services to certain Clients or portfolio companies or other investments directly or indirectly owned by such Clients. PIMCO Aurora LLC ("PIMCO Aurora") is a wholly-owned subsidiary of PIMCO, and service provider for certain Clients. For additional information relating to PIMCO Aurora please see "Payments Made to Service Providers and Other Third Parties" under Item 5.

Securities Lending. We generally do not enter into securities lending arrangements for our Clients (other than for the PIMCO Funds, as described in their respective offering documents). However, from time to time with the agreement of a Client, we may enter into or facilitate securities lending arrangements for that Client. Under typical securities lending arrangements, a manager loans a security held in a client's portfolio to a broker-dealer in exchange for collateral. This collateral can consist of either cash collateral or non-cash collateral (i.e., other securities). The client may earn potentially enhanced returns from these arrangements by collecting finance charges on the loan or by reinvesting cash collateral to earn a positive net return. Such returns are generally shared between the client and the securities lending agent, and the risk associated with the investment of collateral is generally borne by the client.

Some Clients have established separate securities lending arrangements through their custodian. If a Client has entered into these arrangements, the Client and its custodian are responsible for adhering to the requirements of such arrangements, including ensuring that the securities or other assets in the Account are available for any securities lending transactions. We shall neither have nor accept any liability, authority or power to determine, or influence the determination, whether to loan any security in an Account or recall any security that has been lent from an Account by a Client or a Client's custodian. For Accounts that we actively manage, we execute transactions based on a number of factors, including market conditions and best execution, and generally do not consider factors relating to a Client's securities lending arrangements, such as whether the Client's custodian may need to recall securities on loan to settle the sales transactions. We have established policies and procedures in the event there is a loss or overdraft in connection with a transaction. Please refer to "Claims Process" in Item 12, which would include any loss relating to PIMCO's sale of a security that is not available in an Account due to such Client's securities lending activities. For additional information, please see Item 8, "Securities Lending."

Litigation, Class Actions and Bankruptcies. As an investment manager, we are asked from time to time to decide whether to participate in litigation, including by filing proofs of claim in class actions for assets held in an Account. As a general matter, it is the Client's responsibility to monitor and analyze its portfolio and consult with its own advisers and custodian about whether it may have litigation claims that it should consider pursuing. Generally, PIMCO cannot, without express Client written authorization, exercise any rights a Client may have in participating in, commencing or defending suits or legal proceedings such as class actions for assets held or previously held in an Account, although we do undertake such activities for the PIMCO Funds. In the case of Separate Account Clients, upon mutual agreement of PIMCO and the Client and receipt of a letter of authorization and Power of Attorney, we will assist Clients or their custodian in assembling transaction information to file a proof of claim (such as a class action or bankruptcy claim) on behalf of their Account. When submitting proofs of claim on behalf of Clients, PIMCO will not include securities purchased on behalf of a Client by another investment manager. Further, Clients may be precluded from filing a direct claim against an issuer where PIMCO files a proof of claim on behalf of a Client. Generally, a Separate Account's custodian should receive all documents for these matters because the securities are held in the Client's name at the custodian and the Separate Account Client should direct its custodian as to the manner in which such matters should be handled. Notwithstanding the above, in connection with bankruptcies, reorganizations, debt workouts, or other types of corporate events, PIMCO may, and in some cases does, enter into documents and take any and all such actions as may be necessary to facilitate such transactions, including entering into restructuring support agreements, transaction support agreements, releases of claims, providing indemnities, filing proofs of claim, engaging in or defending litigation including as part of an ad hoc group or other group, and or otherwise participating in such transactions, or taking similar actions at our discretion, where permitted, on behalf of PIMCO Funds and Separate Accounts in order for those Funds and

Clients to participate (or participate to the extent PIMCO believes desirable) in the bankruptcy, reorganization or other corporate event, although we are under no obligation to do so. Any such action will bind the Client with respect to the securities or other investments with respect to which the action was taken. In connection with such corporate events, PIMCO may (i) accept, receive, purchase or subscribe for securities or other instruments (including but not limited to, common stock and/or private equity) into an Account, and (ii) hold such securities or instruments for a reasonable time in an Account, in each case, that may or may not be referenced or otherwise permitted in an Account's investment guidelines, provided such actions are in the best interests of the Account. In addition, to the extent that a Client holds assets such as bankruptcy claims, we may, but will not be obligated to, take such actions as we believe desirable in order to realize the value of such asset.

Clients that are currently or were formerly investors in, or otherwise involved with, investments that are the subject of a legal action may or may not (depending on the circumstances) be parties to the particular legal action, with the result that a Client may participate in an action in which not all Clients with similar investments may participate. In these instances, non-participating Clients may benefit from the results of such actions without bearing or otherwise being subject to the associated fees, costs, expenses and liabilities. In connection with these actions, PIMCO Funds and Separate Account Clients may be sued or otherwise be named as defendants.

Tailoring Services to Client Needs

Upon selecting an investment strategy, Clients typically provide PIMCO with specific investment parameters in the form of investment guidelines. The investment guidelines may include, for example, restrictions on investing in certain assets, such as product types, issuers or securities or transaction types with certain attributes. The investment guidelines form a part of our investment management agreement with a Client, and we manage the Account within these confines. Clients should be aware, however, that certain restrictions can limit our ability to act and as a

result, the Account's performance may differ from and may be lower than that of other Accounts that have not limited our discretion. In certain circumstances, Clients and PIMCO will agree to fund an Account before relevant counterparty, custody or similar relationships are fully established. In such circumstances, PIMCO may be delayed in making some or all of the types of investments contemplated by the Account's investment guidelines, and the Account's actual performance may differ from its performance were it able to immediately invest in all instruments and transact with all counterparties contemplated by the Account's investment guidelines.

Important Information About Procedures For Establishing a New Client Relationship

To help the government fight the funding of terrorism and money laundering activities, federal law requires certain financial institutions to obtain, verify, record, and in certain instances, report information that identifies each Client (and, in the case of legal entity customers, their beneficial owners) who opens an Account or establishes a relationship. Accordingly, when we establish a relationship with a Client, when appropriate, we ask for the Client's name, address, and other information or documentation (e.g., a formation document or tax document), as well as information about the Client's beneficial owners (if applicable), that will allow us to identify and verify the Client and the source of Client funds that are being invested. Failure to provide requested information, either at account opening or during the lifetime of the account, may result in us declining to open the account, or freezing or blocking the account.

Wrap and Similar Program Services

PIMCO also offers investment management services through wrap fee programs ("Wrap Programs") that are sponsored by banks, broker-dealers or other investment advisers (each a "Sponsor"). As a provider of investment advice under a Wrap Program, PIMCO is responsible for managing the Account in accordance with the selected investment strategy and any "reasonable restrictions" imposed by the Wrap Program Client, and for this service PIMCO typically receives a portion of the Wrap Program fee from the Sponsor or is paid a fee by the Wrap

Program Client. PIMCO is generally not responsible for determining whether a particular Wrap Program, PIMCO's investment style or a specific PIMCO strategy is suitable, appropriate, or advisable for any particular Wrap Program participant. For these reasons and others, while a same or similar PIMCO strategy might be available through a Wrap Program, the management, execution, performance, and fees for a strategy can and will differ from other Clients, as discussed in greater detail below. PIMCO provides investment advice to both discretionary wrap programs, where PIMCO makes decisions with respect to the investments and trading in the selected strategy for the portion of the portfolio PIMCO manages ("Discretionary Wrap Programs"), and non-discretionary wrap Programs, where PIMCO provides an investment allocation to a Sponsor who determines whether and when to invest and trade ("Non-Discretionary Wrap Programs"), in each case as discussed in greater detail below.

Generally, in a typical Wrap Program, each Wrap Program Client enters into an agreement with a Sponsor, who provides or arranges for the provision of an array of services, including some or all of the following: assistance with establishing client goals and objectives, asset allocation analysis, security selection and other portfolio management services, selection of investment advisers, sub-advisers, custodians and/or broker-dealers, trade execution and ongoing monitoring, reporting and client support, which is generally covered by a single "wrap" fee. Clients access certain Wrap Programs through an intermediary such as a bank, broker-dealer or other investment adviser rather than the Sponsor, in which case the intermediary may provide some, or all, of the functions otherwise provided by a Sponsor. The services to be performed by the Sponsor, PIMCO or others in these Wrap Programs, and related fees, are generally detailed in the relevant agreements between or among the Client, the Sponsor, PIMCO and/or any other parties. With respect to a Sponsor that is a registered investment adviser, the services provided, and other terms, conditions and information related to the Wrap Program are also described in the Wrap Program disclosure documents and the agreement between the Client and

the Sponsor. Sponsors that are not registered investment advisers may, but are not required to, provide a similar Wrap Program disclosure document (each Wrap Program disclosure document, whether for a registered investment adviser or another Sponsor, a "Wrap Program Brochure"). All Wrap Program Clients and prospective Wrap Program Clients should carefully review the terms of the agreement with the Sponsor and the relevant Wrap Program Brochure to understand the terms, services, minimum account size and any additional fees or expenses that are associated with a Wrap Program account.

PIMCO makes available through Wrap Programs certain of the same or similar strategies that are available to institutional clients or through Funds; however, not all of PIMCO's strategies are available through Wrap Programs and not every PIMCO strategy that is available through a particular Wrap Program will be available through other Wrap Programs. Further, the manner in which PIMCO executes a strategy through Wrap Programs may differ from how that same or a similar strategy is executed through another Wrap Program or for a Fund or institutional Client. For instance, the execution of a particular strategy in a Wrap Program may differ from the execution of the same or a similar strategy for a Fund or institutional Client due to the need to adhere to "reasonable restrictions," as discussed below, imposed by the Wrap Program Client or due to the use of affiliated no-fee registered investment companies or other affiliated commingled vehicles rather than individual securities. Accordingly, the performance of a strategy available through a Wrap Program may differ from the performance of the same or a similar strategy that is executed through another Wrap Program or for a Fund or institutional Client.

As a provider of investment advice under a Wrap Program, PIMCO is generally not responsible for determining whether a particular Wrap Program, PIMCO's investment style or a specific PIMCO strategy is suitable, appropriate or advisable for any particular Wrap Program Client. Rather, such determinations are generally the responsibility of the Sponsor and the Client (or the Client's financial advisor and the Client) and

PIMCO is responsible only for managing the Account in accordance with the selected investment strategy and any "reasonable restrictions" imposed by the Wrap Program Client. In the course of providing services to Wrap Program accounts advised by a financial advisor, PIMCO generally relies on information or directions communicated by the financial advisor acting with apparent authority on behalf of its client. PIMCO reserves the right, in its sole discretion, to reject for any reason any Wrap Program Client referred to it.

PIMCO may from time to time engage one or more third-party investment advisers to provide sub-advisory services to PIMCO for certain strategies that are offered to Wrap Program Clients. PIMCO (and not the Client) will be responsible for compensating any such sub-adviser. In particular, PIMCO has entered into agreements with Research Affiliates, LLC ("RA") to develop and offer multiple PIMCO products, including strategies available in Wrap Programs ("RA Strategies") for which PIMCO serves as investment adviser and RA as sub-adviser. PIMCO expects that such RA Strategies will be implemented through a third-party sub-adviser engaged by PIMCO. The terms of PIMCO's agreements with such sub-advisers and/or RA create economic disincentives for PIMCO to terminate or recommend the termination of such sub-advisers or RA.

"Reasonable restrictions" imposed by a Wrap Program Client serve to limit PIMCO's freedom of action with respect to an Account and, as a result, the performance of Accounts for which such investment restrictions are imposed will differ from, and may be worse than, the performance of Accounts within the same strategy that do not have such restrictions.

For its services, PIMCO typically receives a portion of the wrap or other fee paid to the Sponsor or is paid a fee by the Wrap Program Client. For a further discussion of the nature of Wrap Program arrangements, including the fees charged by the Sponsor and paid to PIMCO, see Item 5, Fees and Compensation, Wrap Programs.

Typically, the investment management services we provide in connection with Wrap Programs are discretionary. In Discretionary Wrap Programs, PIMCO is

generally responsible for causing the portion of each Discretionary Wrap Program Client's Account that is managed by PIMCO to engage in transactions that are appropriate for the selected strategy. Wrap Program Accounts within a particular strategy are generally managed similarly, subject to a Wrap Program Client's ability to impose reasonable restrictions (such as a prohibition on holding the securities of a particular issuer within the Wrap Program Client's Account). Because PIMCO's advisory services to these Accounts are strategy-dependent, PIMCO will not accept a restriction that PIMCO believes would be inconsistent with the applicable investment strategy.

PIMCO participates in Wrap Programs, which may be sponsored by affiliates or unaffiliated third parties. PIMCO generally does not compensate Sponsors for PIMCO's inclusion in a Wrap Program or for introductions of Clients through a Wrap Program, although PIMCO makes payments to some Sponsors related to set-up, support, maintenance, servicing, account services and other costs. Such Sponsors may have an incentive to recommend PIMCO's services over the services of another manager. The portion of the total wrap fee paid to PIMCO by certain Sponsors includes breakpoints reducing the effective fee rate payable to PIMCO and thus increasing the amount retained by the Sponsor at higher asset levels. These fees paid to PIMCO by such Sponsors may be negotiable, with the relationship size being a factor in negotiation. Affiliated Sponsors, if any, will have an incentive to recommend PIMCO's services over the services of unaffiliated managers. Sponsors may apply different methods of analysis, use different types of information or apply different thresholds in determining whether to recommend an affiliated manager than are applied when recommending an unaffiliated manager.

Depending upon the particular Wrap Program, accounts may be funded with cash and/or securities. Restrictions as to funding with securities in-kind are described in the relevant Wrap Program brochure and may include certain securities or types of securities that will be liquidated by PIMCO or the Sponsor. Under normal circumstances,

Accounts will generally be fully invested in accordance with the relevant investment strategy within 90 days of PIMCO commencing management of the Account. To the extent that an account is funded with portfolio securities rather than solely cash, implementation may be further delayed because any in-kind contributions that are not consistent with the intended investment strategy for the Account will be liquidated at the Wrap Program Client's risk and expense and without taking into account any adverse tax consequences to the Wrap Program Client.

While the Sponsor is responsible for most aspects of the relationship with a Wrap Program Client, PIMCO personnel who are knowledgeable about the Wrap Program Account and its management will be reasonably available to Wrap Program Clients for consultation (either individually or in conjunction with Sponsor personnel), upon a Wrap Program Client's request, as required by applicable law or as agreed between PIMCO and the Sponsor. Because the Sponsor is generally responsible for reports to Wrap Program Clients, typically PIMCO will supply the Sponsor with information necessary for the Sponsor to provide such reports directly to Wrap Program Clients. Upon request or as agreed with a Sponsor, PIMCO may provide investment holdings, transactions, and performance reports directly to Discretionary Wrap Program Clients on a periodic basis. Moreover, with respect to each Discretionary Wrap Program Client, PIMCO reviews each managed portfolio periodically to ensure it is managed in accordance with the applicable investment objectives, guidelines and restrictions.

In addition, PIMCO may be engaged as a sub-adviser by other investment advisers to manage client accounts outside of a Discretionary Wrap Program ("Direct Managed Account").

For certain cash management purposes (including but not limited to the investment of cash balances, to maintain exposure pending available investment opportunities, or to maintain exposure during Sponsor- or Client-directed tax selling) or as otherwise directed by Sponsor or the Client, PIMCO may utilize a variety of security types, including U.S. Government bonds, money market funds, and, upon the Client's authorization, the

PIMCO Ultra Short Government Active ETF (the “PIMCO ETF”). To the extent a Sponsor or Client has provided such authorization and the Client’s Account invests in the PIMCO ETF, the Client will bear the fees and expenses of the PIMCO ETF in addition to the fees and expenses the Client pays to PIMCO for the management of the Client’s Account. The PIMCO ETF’s fees include fees that are paid to PIMCO for services PIMCO provides to the PIMCO ETF. PIMCO does not expect to consider any ETFs managed by other managers for cash management purposes where the Client or Sponsor has authorized PIMCO to invest in the PIMCO ETF for such purposes. The Client and/or the Sponsor may select another investment vehicle or account for cash management purposes at any time and neither the Client nor the Sponsor is required to select the PIMCO ETF.

With respect to Discretionary Wrap Programs and Direct Managed Accounts, PIMCO has entered into an arrangement with Archer IMS, LLC (“Archer”) under which Archer performs certain administrative and operational functions, such as accounting, reconciliation, trade settlement, recordkeeping, billing and reporting. Typically, these services are paid for by PIMCO and not the Discretionary Wrap Program Clients.

In addition to the advisory services we provide in the Discretionary Wrap Programs, we also provide non-discretionary investment management services to Sponsors who exercise investment discretion. In Non-Discretionary Wrap Programs, we typically provide a model portfolio (which includes allocations to direct investments or to PIMCO Funds, and may include third-party funds, or a combination thereof in PIMCO’s discretion) to be analyzed and implemented by the Sponsor or another manager at the Sponsor’s discretion. Further, in Non-Discretionary Wrap Programs, the Sponsor or other manager is typically responsible for applying any client-imposed restrictions to the model portfolio. In certain Non-Discretionary Wrap Programs, the Sponsor who exercises investment discretion may direct PIMCO to place orders for the execution of purchase and sale transactions for Wrap Program Client portfolios. In such case, trades for the Wrap Program

Client will typically occur after trades placed for non-wrap Accounts, potentially resulting in inferior execution for Wrap Program Clients. Similarly, for Non-Discretionary Wrap Program Clients, to the extent PIMCO does not have trading authority, it is likely that a Sponsor will execute trades after PIMCO has made similar trades for its non-wrap Clients and such execution may be impacted by PIMCO’s execution.

Stable Value Investment Management Services

PIMCO offers a wide variety of stable value services, including 1) full-service stable value management, in which PIMCO handles all aspects of the stable value investment strategy; 2) investment-only fixed income management where PIMCO is hired directly by plan sponsors to manage their stable value portfolio; or 3) fixed income sub-advisory services whereby PIMCO is hired by other stable value managers and insurance companies to manage all or a portion of the assets of a fixed income portfolio. PIMCO manages Separate Account portfolios for large institutional defined contribution plans as well as a stable value commingled vehicle for the small-and mid-sized defined contribution marketplace.

Model Portfolios

PIMCO develops and maintains model portfolios (“Model Portfolios”) that are typically comprised of PIMCO Funds, including ETFs, but may be comprised of separately managed accounts managed by PIMCO or a third-party, pooled investment vehicles managed by a third-party, indices administered by a third-party, and/or a portfolio of securities (collectively, “underlying investments”). These Model Portfolios are licensed or otherwise made available (including through Non-Discretionary Wrap Programs) to third-party managers and intermediaries. Such firms may use Model Portfolios as investment strategies for managing their underlying clients’ accounts. The Model Portfolios seek to provide exposure to investment strategies that collectively reflect PIMCO’s investment outlook. Model Portfolio allocations are based on what PIMCO believes to be generally accepted investment theory. As further described below, a variety of factors influence the inclusion or exclusion of an

underlying investment in a Model Portfolio. In adjusting Model Portfolios, PIMCO considers, among other things, the results of quantitative modeling. Such quantitative modeling is designed to optimize each Model Portfolio's allocation and align with the Model Portfolio's investment objective and internal PIMCO guidelines and takes into account various factors or "inputs", determined by PIMCO, including third-party data, to generate a suggested allocation for the Model Portfolios. PIMCO's investment team then reviews the quantitative output and adjusts the output to reflect variables, which may include, among other things, the anticipated trade size, and qualitative investment insights. PIMCO Model Portfolio allocations are ultimately subject to the discretion of PIMCO's investment team. Model Portfolio allocations are not based on any particular investor's financial situation, or need, although, in some instances a Model Portfolio may be designed or modified to meet certain investment guideline parameters of third-party platforms on which the Model Portfolio(s) may be made available and, unless specifically stated otherwise, are not intended to be, and should not be construed as, a forecast, research, investment advice or a recommendation for any specific PIMCO or other strategy, product or service.

The risks of a Model Portfolio allocation depend on the risks of the underlying investments represented in the Model Portfolio allocation. Please refer to Item 8 for a broader discussion of material risks. The Model Portfolio allocation is also subject to the risk that the selection of the underlying investments and the allocation and reallocation of the Model Portfolio allocation's assets among the various underlying investments might not produce the desired result. Model Portfolios are constructed in reliance on forward-looking assumptions, forecasts, and estimates, and, as a result, Model Portfolios do not fully reflect the impact that material economic and market factors might have had on PIMCO's decision making if PIMCO had actually managed a portfolio with assets pursuant to the Model Portfolio since its inception; Model Portfolios also do not reflect the impact of future material economic and market factors not available at the time of allocation. The

allocations to underlying investments in a Model Portfolio have changed over time and may change in the future. The selection and weighting process across underlying investments is partially informed based on return estimates driven by PIMCO's Systems, which are discussed further in Item 8, Quantitative Investing Risk. These Systems rely heavily on the use of proprietary and nonproprietary data, software, hardware, and intellectual property, including data, software and hardware that may be licensed or otherwise obtained from third parties. The use of such Systems has inherent limitations and risks. Although PIMCO takes reasonable steps to develop and use Systems appropriately and effectively, there can be no assurance that PIMCO will successfully do so. Errors may occur in the design, writing, testing, validation, maintenance, monitoring, and/or implementation of Systems, including in the manner in which Systems function together. The effectiveness of Systems may diminish over time, including as a result of market changes and changes in the behavior of market participants or based on how such Systems are applied. The quality of the resulting analysis, including the Model Portfolio allocations, depends on a number of factors including the accuracy and quality of data inputs into the Systems, the mathematical and analytical assumptions and underpinnings of the Systems' coding, the accuracy in translating those assumptions into program code or interpreting the output of a System by another System in order to facilitate a change in market conditions, the successful integration of the various Systems into the portfolio selection and trading process and whether actual market events correspond to one or more assumptions underlying the Systems. Please refer to "Quantitative Investing Risk" in Item 8, which discusses the reliance on Systems and that Systems are subject to errors and/or mistakes ("System Incidents") that may adversely impact Accounts.

PIMCO does not recommend or select money market or other cash-equivalent sweep vehicles for purposes of implementation of such cash allocations, which shall be the responsibility of the implementing investment professional. Information about Model Portfolios is made available on certain financial intermediary and other

platforms and is updated periodically in accordance with the Model Portfolio's defined production schedule and with the overriding objective of achieving fair and equitable treatment of investor accounts over time. With respect to Model Portfolios, under normal circumstances, platforms will receive notice of updated model allocations within a 24-hour period and are expected to execute trades on the same business day of receipt or prior to market open on the advised trade date. For Model Portfolios that hold ETFs, under normal circumstances, platforms will receive updated model allocations after market close on the business day preceding the anticipated trade date or prior to market open on the anticipated trade date. In the event that a particular platform's business needs require updated allocations to be delivered during a pre-specified window that falls outside of the delivery window described in the preceding sentence, PIMCO will make reasonable efforts to work with those platforms to deliver updated allocations within such timeframe. In connection with the Model Portfolios, Archer performs certain administrative and operational functions, including the dissemination of updates to the Model Portfolios to platforms. Any investment in an investment company will be subject to the terms and conditions of the investment company's prospectus.

The investment results achieved by a Model Portfolio at any given time, including for the same or similar investments, could and will differ from the investment results achieved by other PIMCO Funds or Accounts for which PIMCO acts as investment adviser, including Funds or Accounts with names, investment objectives, benchmarks, policies and/or portfolio management teams similar to the Model Portfolio. There is no guarantee that the use of a Model Portfolio will result in effective investment outcomes. In addition, PIMCO cannot guarantee the availability for purchase of any Fund or investment product, as applicable, at any particular time or, to the extent a Model Portfolio includes an allocation to ETFs, that an active trading market for ETF shares will develop or be maintained or that their listing will continue or remain unchanged. Model Portfolios are developed in part on the basis of

historical data regarding particular economic factors and securities prices that may be ineffective as a result of changes in the market and/or changes in the behavior of other market participants.

Model Portfolios are provided "as-is," and PIMCO makes no express or implied warranties of merchantability, suitability or fitness for a particular purpose or use. Although PIMCO takes reasonable steps to develop Model Portfolios, there can be no assurance that PIMCO will successfully do so. Errors may occur in the design, testing, validation, monitoring, maintenance, transmission or implementation of Model Portfolios. PIMCO generally does not classify errors and/or mistakes that it may make in connection with a Model Portfolio to be Trade Errors (as defined below) and PIMCO is not responsible for losses associated with errors and/or mistakes related to a Model Portfolio.

Certain Model Portfolios are expected to consist of a portfolio of securities. Such Model Portfolios may be used by PIMCO to manage Funds and Accounts at the same time such Model Portfolios are provided to intermediaries. It is expected that intermediary firms could be provided updates to such Model Portfolios and/or implement updates to such Model Portfolios subsequent to PIMCO implementing updates to such Model Portfolios for Funds or Accounts. Accordingly, PIMCO Funds or Accounts that follow a Model Portfolio may be competing for applicable investment or disposition opportunities with accounts managed by financial intermediaries who receive Model Portfolio information. Transactions ultimately placed by such intermediaries for their investors or by the Funds or Accounts may be subject to price movements, particularly with large orders relative to the given security's trading volume, that may result in execution prices that are less favorable. Further, while PIMCO takes reasonable steps in an effort to mitigate the market impact caused by transactions for accounts over which PIMCO has investment or trading authority, because PIMCO does not control the intermediary's execution of transactions for its clients, PIMCO cannot control the market impact of such transactions to the same extent

that it may be able for accounts over which PIMCO has trading authority. Such intermediaries are expected to have sole authority and responsibility for the selection of broker-dealers and the execution of transactions for their client accounts. PIMCO is not responsible for placing orders for the execution of Model Portfolio transactions involving assets of such intermediary client accounts or for giving instructions to the intermediary with respect thereto.

Customized Target Date Strategy

myTDF® is a customized target date model ("myTDF Model"). myTDF is made available to participating retirement plans and plan fiduciaries through services provided by a "myTDF Manager", which is either (i) PIMCO or (ii) a third-party investment manager that licenses the myTDF Model from PIMCO. In the case of a third-party myTDF Manager, that third-party is responsible for implementing the methodology for plan participants, and PIMCO has no discretion related to the management of such plan participant accounts. Use of these non-discretionary services are subject to the risks described under "Model Portfolios" above.

The myTDF Model incorporates certain demographic factors, which may include an individual's age, salary, assets, savings rate, and/or company retirement plan match rate, and is designed to assign more personalized investment allocations for plan participants of retirement plans that have selected the myTDF services. The myTDF service uses a PIMCO proprietary methodology to construct various portfolios that include PIMCO-advised CITs (each a "myTDF Portfolio" and collectively, "myTDF Portfolios"). Such construction is based on quantitative and qualitative data relating to various risk metrics, long-term market trends, correlation of asset types and actuarial assumptions of life expectancy and retirement.

The myTDF Model is hosted by and made available to participating plan recordkeepers ("Plan Providers") through one or more technology providers responsible for the operation of the myTDF Model and hosting the myTDF Model on a technology provider's platform. Pursuant to an automated process, the technology provider's platform provides Plan Providers an interface

so that the Plan Provider may provide participant data to be inputted into the myTDF Model, Plan Providers place trade transactions to implement the myTDF Model for plan participants and are responsible for following the investment allocations specified by the myTDF service. The Plan Provider, and not PIMCO, selects the myTDF Portfolio on behalf of plan participants and there is no guarantee such Plan Providers will allocate in accordance with the recommendations under a myTDF Portfolio. Plan participants should review the documentation provided by their plan sponsor for more information about myTDF and the myTDF model.

Where PIMCO is not the myTDF Manager, PIMCO instead licenses the myTDF Model to a third-party myTDF Manager that acts in a fiduciary capacity with respect to Plan Providers, participating plans and plan participants. The third-party myTDF Manager, and not PIMCO, has discretion for deciding if and how to utilize the myTDF Model with respect to any Plan Provider, participating plan or its participants. PIMCO is not responsible for any selection or ongoing monitoring related to the fiduciary services provided to a plan or plan participant by a third-party myTDF Manager.

ITEM 5. Fees And Compensation

Generally, PIMCO's fees for providing discretionary investment management services are based upon a percentage of the market value of assets under management. Accounts are generally subject to a minimum asset size, as noted in Appendix B, however such minimums may be waived by PIMCO in its sole discretion. PIMCO also provides customized products and services, including non-discretionary investment management services, upon mutual agreement, and fees for such products and services are separately negotiated. Our fees are generally billed quarterly or monthly in arrears; however, some Clients opt to pay fees in advance at their own discretion. If a Client opts to pay its management fees in advance and the applicable agreement is ultimately terminated prior to the end of the billing period, the management fees will be pro-rated for the portion of the billing period in which the agreement was in effect and PIMCO will issue the Client a

refund for any excess fees. In addition, as described herein, PIMCO also charges performance-based fees in certain circumstances.

Separate Accounts. For discretionary investment management services to Separate Accounts, we typically charge a fee that is based on a percentage of the Separate Account's assets under management. Customized fee arrangements may be available for Clients such as those with performance-based fees or for strategies for which fees are based on notional assets or commitment amount. Fees are individually negotiated in such cases or in the case of larger Accounts, Accounts whose service needs deviate markedly from the types of service typically required by Separate Accounts, and Accounts that may involve other special circumstances or restrictions. Our fees take into account, among other things, a Separate Account's investment strategy, the level of discretion given to PIMCO, the extent of the Separate Account's servicing requirements, the Client's total assets under management aggregated across the Client's relationship with PIMCO and certain of its affiliates, the source of the assets, relationship to PIMCO (i.e., whether the Client is an affiliate or employee) and the type and nature of the Separate Account. PIMCO is generally not obligated to provide notice to, or obtain the consent of, one Client when reducing, waiving, or modifying fees or other contractual terms with any other Client. Certain employees or former employees of PIMCO investing in a Separate Account managed by PIMCO or its affiliates pay reduced management fees in connection with their investment. In addition, certain Separate Account Clients have negotiated and may from time to time seek to negotiate most favored nation ("MFN" and each, an "MFN Client") clauses in their investment management agreements with PIMCO. These provisions generally require PIMCO to notify the MFN Client if PIMCO has entered or subsequently enters into a more favorable fee arrangement with a similarly situated or comparable Client and offer the MFN Client the same fee arrangement. The applicability of these MFN provisions typically depends on the degree of similarity between Clients based on certain factors, including, but not limited to, the amount of assets under management, overall relationship size, fee structure, servicing level,

source of assets, relationship to PIMCO (i.e., whether the Client is an affiliate or employee), investment strategy, guidelines, and reporting requirements. PIMCO does not agree to MFN provisions in all circumstances.

With respect to discretionary Separate Accounts, if a Client gives us discretion to use Client assets on which we charge an asset-based management fee to purchase interests in the Funds, we will generally rebate a portion of the Separate Account fees back to the Client in an amount that approximates the advisory fee of the Fund in which the Client invested, unless otherwise agreed or disclosed to the Client. In some circumstances, no such rebate is provided, such as in cases where the Separate Account's assets are invested in a Fund that does not charge an advisory fee (and the only advisory fees charged to the Client are charged at the Separate Account level). Depending on the Fund, we also rebate all or a portion of the Fund's supervisory and administrative fee. The rebate amount may differ by Fund, and, in certain instances (e.g., certain Funds that follow the Total Return Strategy), the rebate amount may be different for Funds that follow the same or similar strategies. If a Separate Account's investment guidelines permit investments in our Funds, we will provide the Client with a list of the Funds in which the Account is permitted to invest, together with a schedule showing the applicable fee rates and rebates, where applicable. If we purchase interests in unaffiliated funds, such as ETFs or other funds, that are not advised or sub-advised by PIMCO, the Separate Account will pay the fees and expenses of these funds in addition to the Separate Account fees. Additionally, to the extent set forth and agreed in a Client's IMA, certain Accounts will bear certain operating and other expenses associated with their Account.

PIMCO Registered Funds. We provide discretionary investment management services to U.S. registered and non-U.S. registered funds (each, a "Registered Fund"). Each Registered Fund's offering documents will include information about the fees and expenses paid by the Registered Fund. Portfolio management fees and any additional compensation paid to PIMCO may be waived by PIMCO in its sole discretion, both voluntarily and on a

negotiated basis with a Registered Fund's Board or similar body, or a Registered Fund's sponsor (though not with individual investors in a U.S. Registered Fund). We may receive additional compensation for administrative or other services provided to these Registered Funds as described in the respective Registered Fund's offering documents.

PIMCO Private Funds. We provide discretionary investment management services to U.S. and non-U.S. domiciled private funds that are not registered under the Investment Company Act of 1940, as amended (the "1940 Act"), and whose interests are not registered under the Securities Act of 1933, as amended (the "Securities Act") (each, a "Private Fund"). Certain Private Funds are managed on a standalone basis, while others are managed as part of a "master-feeder" structure wherein one or more feeder funds invest their assets in one or more master funds, or in parallel with other funds.

Each Private Fund's offering documents include information about the fees and expenses paid by the Private Fund. For discretionary investment management services to Private Funds, we are paid from each Private Fund's assets, management fees generally ranging from 0.00% to 2.00%, which are typically based on invested and reinvested capital (and in some cases, committed capital) or net asset value. These management fees are negotiable, are typically paid in arrears, and may vary for different Private Fund investors. The management fees and other fees and distributions paid by Private Funds described herein are generally subject to modification, waiver, rebate or reduction, or may be calculated differently with respect to any investor, by PIMCO in its sole discretion, both voluntarily and on a negotiated basis with selected investors via side letter and other arrangements. The fee structures described herein may be modified from time to time. Fees may differ among investors in the same Private Fund. In certain cases, we are also paid administration fees from each Private Fund's assets generally ranging from 0.00% to 0.40%, which are also typically based on invested and reinvested capital or net asset value, as applicable. In some cases, the management fees and administration fees described

above are paid on a combined, or unified fee, basis and such fees for certain Private Funds may be based on notional value, as described in the offering documents for such Private Fund.

In addition, we or our affiliates receive performance-based fees or profit allocations (e.g., "carried interest") with respect to certain of our Private Funds as further discussed in Item 6. Each Private Fund also ordinarily bears its own organizational expenses (in some cases subject to a cap). Each Private Fund also bears certain operating expenses with feeder funds typically bearing a pro rata share of expenses associated with their respective master funds and certain other expenses associated with the feeder fund's own specific operations. Further details of these expenses are described in the Private Fund's offering documents. Certain Private Funds invest in other PIMCO Funds. Depending on the terms of the investing Private Fund, we may or may not rebate a portion of any additional fees paid by the investing Private Fund as a result of its investment in the underlying PIMCO Fund. In addition, in certain cases, we (or our affiliates) receive fees for providing services to Clients, Funds, or portfolio companies. Fees for these services may be borne by a Private Fund subject to its governing documents and may not reduce or be offset against the other fees paid by the Private Fund to PIMCO.

Certain investors in a Private Fund that are employees, business associates and other "friends and family" of PIMCO, its affiliates or their personnel (including any related entity established by any of the foregoing, such as trusts, charitable programs, endowments or related programs, family investment vehicles and other estate planning vehicles) (collectively, "Adviser Investors") will not typically pay management fees or other incentive or performance-based compensation in connection with their investment in a Private Fund or pay a reduced rate. Furthermore, PIMCO from time to time, will establish certain investment vehicles through which Adviser Investors or other third parties may invest alongside one or more Accounts in one or more investment opportunities, which generally do not pay management

fees or other incentive or performance-based compensation.

PIMCO also serves as an investment manager to CITs. We are paid portfolio management and/or performance-based fees for discretionary investment management services to these CITs, and investments in certain of the CITs managed by PIMCO may be subject to additional fees on account of their underlying investments.

PIMCO's Non-Discretionary and Other Business Initiatives.

Fees for these services are individually negotiated and depend on the type and complexity of the services requested. Clients and prospective clients should contact their PIMCO Account representative for additional information.

Additional Costs. With respect to investment management services, a Client may also incur brokerage commissions, mark-ups or mark-downs and other transaction costs associated with transactions that are executed in the Account. Please see Item 12, "Brokerage Practices," for a discussion of our brokerage practices. In addition, Clients may also incur taxes as a result of transactions undertaken in their Account. Further, a Client may also be subject to payment of valued-added, withholding or other applicable taxes, which may be assessed, due or owed in connection with the payment of fees to PIMCO. Although we are under no obligation to do so, PIMCO will inform Clients on a reasonable efforts basis to the extent it is aware of any known tax withholdings.

Payments Made to Service Providers and Other Third Parties.

PIMCO and its affiliates also engage or otherwise transact with one or more Service Providers (defined herein) in connection with its investment process and ongoing operations, including in respect of the organization and operations of Accounts and their portfolio investments. "Service Providers" include consultants, advisors, transaction finders, sourcers and other persons involved in the identification or origination of investment opportunities, operating partners, loan and other servicers, loan and other originators, collateral managers, program managers, property and other asset managers, leasing agents, asset monitors and

administrators (including copyright administrators), developers, project managers, investment bankers, brokers, accountants, valuation agents, waterfall agents, calculation agents, paying agents, billing and collection agents, trustees, master servicers, software providers, tax preparers and consultants, analytic service providers, technology professionals and other technology providers, pricing/modeling service providers, insurance providers, internal or external legal counsel, appraisers, industry or sector experts, joint venture partners and development partners, regulatory and compliance service providers, contract employees, outside legal counsel and/or temporary employees (as well as secondees of any of the foregoing), and other persons providing similar types of services, whether working onsite at PIMCO offices or offsite. Service Providers will provide services in respect of an Account, its related investing vehicles, portfolio investments, securitizations, and/or other entities in which the Account invests in respect of transactions in which the Account or such entities participate. Service Providers may be engaged to perform multiple functions in respect of investments, which will give rise to certain conflicts of interest. For instance, any servicer that also functions as valuation agent in respect of an investment may face conflicts of interest in carrying out multiple functions.

Certain Service Providers are owned by or otherwise related to or affiliated with an Account or another PIMCO Client (e.g., originators and servicers), and in certain cases, Service Providers are expected to be, or are owned by, employed by, or otherwise related to, PIMCO, Allianz SE, their affiliates and/or their respective employees, consultants and other personnel. In certain cases, Service Providers or personnel thereof will not be employees of PIMCO or its affiliates notwithstanding the fact that they will have attributes of employees of PIMCO or its affiliates (e.g., they may have dedicated offices at PIMCO, or an affiliate thereof, use email addresses, telephone numbers and other contact information that are similar to those used by personnel of PIMCO or its affiliates, participate in general meetings and events for personnel of PIMCO or its affiliates, work on matters for PIMCO or its affiliates as their primary or sole business activity

and/or be compensated on a weekly or monthly basis rather than on a project basis) and in other cases, such Service Providers will be employees of PIMCO or its affiliates with respect to certain activities, even though they are not considered PIMCO employees, affiliates or personnel for purposes of certain provisions of an Account's offering and governing documents, including portions thereof relating to PIMCO expenses and transaction fees ("Dual Service Providers").

Dual Service Providers will have a variety of roles and titles with respect to their employment with PIMCO or its affiliates, and will include legal, paralegal, finance, tax, accounting, technology, compliance, valuation, operational, asset management professionals, portfolio managers, analysts and other investment professionals of PIMCO or its affiliates.

PIMCO Aurora is a Service Provider. Currently, all personnel of PIMCO Aurora are employees of PIMCO or an indirect subsidiary thereof and these individuals provide services on behalf of both the entity that employs them and PIMCO Aurora. In the future, some individuals may be employed by and provide services exclusively on behalf of PIMCO Aurora while others will continue to be Dual Service Providers. An Account may in the future use other affiliated Service Providers (each, including PIMCO Aurora, an "Affiliated Service Provider").

Affiliated Service Providers provide organizational services, investment-related services, capital markets and investment banking-related services and asset management-related services as described in an Account's offering documents. PIMCO Aurora and/or other Affiliated Service Providers may provide services in addition to those listed in an Account's offering documents, and if the costs of those services could be Account expenses if provided by a third-party service provider, then they will be Account expenses when provided by PIMCO Aurora and/or any other Affiliated Service Provider where permitted by the Account's governing documents. Fees paid to PIMCO Aurora and/or other Affiliated Service Providers (including other Dual Service Providers) will not be treated as transaction fees and will not offset or otherwise reduce the fees

payable to PIMCO. Although PIMCO has adopted various policies and procedures intended to mitigate or otherwise manage conflicts of interest, there can be no guarantee that such policies and procedures (which may be modified or terminated at any time in PIMCO's sole discretion) will be successful. Fees paid to an Affiliated Service Provider will be determined in PIMCO's commercially reasonable discretion, taking into account the relevant facts and circumstances and consistent with the responsibilities of PIMCO.

Any fees, costs, expenses and liabilities incurred through the use or engagement of Service Providers (including, for the avoidance of doubt, PIMCO Aurora or another Affiliated Service Provider) will be borne (directly or indirectly) by an Account and will not offset fees payable to PIMCO, even though such amounts may be substantial. For example, an Account's use of Dual Service Providers may mean that the Account will bear (directly or indirectly) a portion of the compensation and overhead paid to employees of PIMCO and its affiliates that would otherwise have been borne by PIMCO and its affiliates. Therefore, PIMCO has an incentive to cause an Account to rely on Dual Service Providers, as doing so will reduce the expenses borne by PIMCO, thereby increasing PIMCO's profitability.

Compensation arrangements with Service Providers (including Affiliated Service Providers) may be structured in various ways, including project-based fees, time-based (e.g., hourly, weekly or monthly) fees, asset-based fees, flat fees, fees calculated on a basis-point or percentage basis, origination fees, placement fees, servicing fees, management promote, transaction-based or success-based fees, incentive fees and/or a profits or equity interest in a portfolio investment. Service Providers will not be required to provide services "at cost" and therefore are expected to earn a profit from providing services to an Account. Although PIMCO has adopted various policies and procedures intended to mitigate or otherwise manage conflicts of interest, there can be no guarantee that such policies and procedures (which may be modified or terminated at any time in PIMCO's sole discretion) will be successful.

Wrap Programs. Wrap Program Clients typically pay a fee to the Sponsor based on assets managed through the Wrap Program. This fee generally covers most, or all of the investment advisory services provided by PIMCO (and any sub-adviser engaged by PIMCO) through the Wrap Program. Each Sponsor pays to PIMCO a negotiated fee, generally based on Wrap Program assets managed by PIMCO. Thus, in effect, PIMCO receives a portion of the wrap fee paid by each Wrap Program Client to the Sponsor. Because, among other things, the scope of services provided by PIMCO through a Wrap Program is narrower than PIMCO might provide to a Client that receives PIMCO's services directly, the effective fee rates charged by PIMCO to Sponsors are typically less than what would be applicable to Accounts managed directly, but a Wrap Program Client's wrap fee can be higher than the aggregate fees that the Client might otherwise pay for these services, if they were obtained separately.

In some Wrap Programs, PIMCO's advisory fees are not included within the wrap fee. Instead, the Wrap Program Client compensates PIMCO directly for such advisory services. Although the Wrap Program fee generally covers the Wrap Program services, Wrap Program Clients may be subject to additional fees and expenses such as: (i) commissions and other expenses on trades executed away from the Sponsor or the Sponsor's designated broker-dealer(s); (ii) mark-ups and mark-downs on fixed income transactions; (iii) expenses related to cash sweep services or vehicles or other investment vehicles, including ETFs; and (iv) taxes and charges such as exchange fees and transfer taxes. In addition, assets managed pursuant to certain Wrap Program strategies that have the ability to invest in a PIMCO ETF will bear the fees and expenses of such PIMCO ETF, which include fees that are paid to PIMCO for services it provides to the PIMCO ETF. Such fees may be in addition to the fees PIMCO receives for managing assets through the Wrap Program.

Clients should carefully review the Sponsor's Wrap Program Brochure and the agreement between Client and Sponsor prior to participating in any Wrap Program

and, in particular, consider the services that are covered by the wrap fee as they relate to the management styles and trading methods being employed by portfolio managers within the Wrap Program. Depending upon the wrap fee charged, the amount and type of account activity (for example, whether transactions must frequently be executed away from the Sponsor or the Sponsor's designated broker-dealer at an increased charge), the value of custodial and other services provided and other factors, the wrap fee may exceed the aggregate fees that the Client might pay other parties for these services, if they were obtained separately. In this respect, Clients should be aware that for certain PIMCO strategies (e.g., municipal bond and other fixed income strategies), PIMCO will typically execute fixed income security transactions for Wrap Program Client Accounts according to PIMCO's trade allocation policy and procedures, which will in most cases result in such trades being executed away from the Sponsor or the Sponsor's designated broker-dealer. In respect to these trades, Clients should also be aware that Sponsors typically do not include commissions, commission equivalents (such as mark-ups or mark-downs) or other transaction related expenses with respect to fixed income transactions within the wrap fee or may have limited capability to execute such transactions. As noted above, the wrap fee typically covers only certain transactions, such as transactions in equity securities that are executed through the Sponsor or the designated broker-dealer, so Wrap Program Clients would not get the full benefit of the wrap fee to the extent that such trades are executed away from the Sponsor or the Sponsor's designated broker-dealer. However, as noted in Item 7, PIMCO typically requires non-Wrap Program Accounts managed by it directly to meet minimum account sizes that are typically significantly higher than the minimum account size required by a Wrap Program.

As noted in Item 4, "Wrap and Similar Program Services", in the event a Wrap Program Client or the Sponsor has authorized PIMCO to invest in the PIMCO ETF for cash management purposes, the Client will bear the fees and expenses of the PIMCO ETF in addition to the fees and expenses the Client pays for the management of the

Client's Account. This includes fees that are paid to PIMCO for services PIMCO provides to the PIMCO ETF.

In the event PIMCO is engaged as a sub-adviser by investment advisers to manage client accounts outside of a Discretionary Wrap Program, PIMCO is typically paid a portion of that investment adviser's fee from the client, although under certain circumstances PIMCO may be compensated directly by the client.

Basic fee schedules for PIMCO's investment management services are outlined in Appendix B. Such fee schedules are subject to change and may be negotiable.

Model Portfolios. Most Model Portfolios are expected to consist of 100% Funds or a very significant percentage of Funds, although in limited cases PIMCO may be engaged to create Model Portfolios that include products or Accounts managed by PIMCO or a third-party, or pooled investment vehicles managed by a third-party, or indices administered by a third-party, or a portfolio of securities. A conflict of interest exists with respect to PIMCO selecting the Funds for the Model Portfolios, because PIMCO and its affiliates provide services and receive fees from the Funds, and therefore the Model Portfolios' investments in Funds will benefit PIMCO and its affiliates. While in certain arrangements PIMCO may be compensated for delivering the Model Portfolios, including but not limited to arrangements where Model Portfolios include investments in fixed income securities, the fees that PIMCO and its affiliates receive from the Model Portfolios' investments in the PIMCO Funds are typically PIMCO's only compensation with respect to the Model Portfolios. This conflict of interest could result in Model Portfolios with lower performance or higher fees than they would have had if the Model Portfolios did not invest in PIMCO Funds.

In addition to the foregoing, PIMCO may sub-license certain model portfolio information it obtains from a third-party to financial intermediaries. PIMCO may be compensated for such sub-licensing arrangements.

Customized Target Date Service. The myTDF Model described in Item 4, "*Customized Target Date Strategy*," involves the construction of various portfolios that

include PIMCO-advised CITs. A conflict of interest exists with respect to PIMCO selecting those CITs for these services, because PIMCO and its affiliates provide services and receive fees from the CITs, and therefore the investments in CITs that result from these services will benefit PIMCO and its affiliates. This conflict of interest could result in investors who use these services experiencing lower performance or higher fees than they would have had if they did not invest in the CITs through these services.

Allocation of Expenses. PIMCO manages multiple Accounts which have investment objectives that currently, and may in the future, overlap with those of one or more other Accounts. The appropriate allocation of expenses and fees for investments and investment opportunities between or among Accounts will be determined by PIMCO and its related persons, respectively, in their good faith discretion, consistent with PIMCO's expense allocation policies and procedures, which are designed to allocate expenses in a fair and equitable manner among Accounts. In addition, fees and expenses, including fees and expenses of Service Providers, including PIMCO Aurora and other Affiliated Service Providers, will be allocated in accordance with the applicable offering or governing documents or investment management agreement. To the extent not addressed therein, PIMCO, to the extent it has the authority to do so, will make any such allocation determination in a fair and reasonable manner using its good faith judgment, notwithstanding its interest (if any) in the allocation. As a result, in exercising discretion to allocate fees and expenses, PIMCO is faced with a variety of potential conflicts of interest, which are disclosed in the applicable offering or governing documents or investment management agreement. For additional information regarding such potential conflicts, please see Item 11, "Potential Conflicts Relating to Advisory Activities: Potential Conflicts of Interest Stemming from Trade Aggregation and Allocation."

ITEM 6. Performance-Based Fees And Side-By-Side Management

As discussed above, certain of our Clients and clients of our affiliates ("Affiliate Clients") will pay us or our affiliates performance-based fees or investment profit allocations in the form of a performance allocation or carried interest, meaning fees based on a share of capital gains or capital appreciation of the assets of a client. Such performance-based fees and investment profit allocations may create potential conflicts of interest because PIMCO and its affiliates manage Clients and Affiliate Clients with such fee arrangements side-by-side with Clients and Affiliate Clients that we charge a fixed fee based on assets under management, including that we (and our supervised persons) have an incentive to favor accounts where we receive a performance-based fee. Please see Item 10, "Other Financial Industry Activities and Affiliations" and Item 11, "Code of Ethics, Participation or Interest in Client Transactions and Personal Trading" for a discussion of the conflicts and risks associated with side-by-side management and how PIMCO addresses these matters.

ITEM 7. Types Of Clients

Our Clients. Our global client base includes corporate pension plans, foundations, endowments, public retirement plans, corporate treasury assets, governments and sovereign wealth funds, insurance companies, high net-worth individuals, family offices, multi-employer retirement plans, financial institutions, intermediaries, retail investors and pooled investment vehicles, including both affiliated and unaffiliated U.S. and non-U.S. registered and unregistered funds, among others. We have minimum account size requirements for Separate Accounts. Please see our standard fee schedules outlined in Appendix B for more information regarding Separate Account minimums, which may be waived PIMCO's discretion. PIMCO also acts, or has acted, as an investment adviser or collateral manager to a number of unregistered structured products including but not limited to Collateralized Debt Obligations ("CDOs"), Collateralized Loan Obligations ("CLOs") and similar structured finance products. We also

sponsor a business development company and may sponsor holding company conglomerates that are structured and operated in a manner permitting them to be exempt from the definition of "investment company" under the Investment Company Act. We may also sponsor or advise real estate investment trusts (REITs).

As noted in Item 4, Clients may access our investment management services directly, through pooled investment vehicles, or they can be obtained through Wrap Programs. Certain Wrap Programs also impose overall Wrap Program minimums and/or minimums required to maintain an investment option. Wrap Program minimums are determined by the Wrap Program Sponsor. Please consult the Sponsor's Wrap Program Brochure for more information.

Privacy Policy. We are strongly committed to protecting the privacy of our Client's information, including non-public personal information and will not as a matter of policy disclose such information except as required or permitted by law or for our everyday business purposes, such as to process transactions or to service an Account. In the ordinary course of our business, we and certain of our Service Providers need to obtain certain information from Clients. In such cases, we may share our Client's information with third-party Service Providers who are acting on our behalf or for our Client's benefit. In certain instances, we will share such information with affiliated and unaffiliated third parties subject to applicable laws and regulations. For example, we will provide Client information, including non-public personal information, to SSIMS so that SSIMS may provide services to an Account. We will also provide such information to a third-party where a Client has given us consent to do so (such as to the Client's Custodian), at the request of a regulator or where we are required to disclose the information by law or regulation. We have adopted privacy policies and procedures that are designed to prevent the unauthorized disclosure and use of Client information including non-public personal information. Please refer to Appendix E for PIMCO's Client Privacy Policy.

Use of Information. Any information provided by PIMCO to a specific Client is intended to be used solely by the recipient in considering the products or services described therein and may not be used for any other reason, whether personal or otherwise.

ITEM 8. Methods Of Analysis, Investment Strategies And Risk Of Loss

Methods of Analysis and Investment Strategies

PIMCO's macroeconomic forecasting, comprehensive sector and asset analysis and rigorous risk management processes address the challenges of a rapidly changing world. In evaluating securities and other instruments and assets we generally take into account a number of factors, including the fundamental, technical and cyclical characteristics of an asset. For example, PIMCO's analysis of mortgage-backed securities includes analysis of security structures and mortgage prepayment rates using proprietary and third-party analytic tools and databases. Our analysis of investments in public and private foreign issuers and assets, particularly in emerging market countries, includes any of the following: country risk analysis; consideration of global trading relationships such as free trade agreements; visits with company management and meetings with official creditors government officers, business leaders, academics, economists, and politicians. PIMCO's analysis of senior loans and bank loans typically includes direct contact with the agent bank, issuer and/or borrower. Like our fixed income strategies, our analysis of equities also involves various sources and types of research and may include discussions or visits with company management, and we seek to identify securities that are undervalued by the market in comparison to our own determination of the company's value, taking into account criteria such as assets, book value, cash flow and earnings estimates. As part of our analysis PIMCO conducts its own research on issuers and/or has adopted internal processes for assigning internally generated credit ratings ("Internal Ratings"), which can differ from ratings provided by third-party credit rating agencies ("Agency Ratings"). Internal Ratings reflect PIMCO's view of an issuer's

creditworthiness and PIMCO utilizes a process that may differ from the process used by third-party rating agencies. Internal Ratings are designed to reflect current economic and market conditions applicable to the asset, and take into account a range of any one or combination of factors, including but not limited to the nature of the asset, the ratings assigned by certain rating agencies, the operational history of the issuer, the issuer's cash position, leverage and cash flow, the issuer's position in the industry, the structure of the issuer's debt obligations and political dynamics. Unlike Agency Ratings, Internal Ratings may assess not only probabilities of default but also expected loss upon default. PIMCO monitors the factors influencing the rating and may periodically re-evaluate Internal Ratings to determine whether changes are necessary. Because Internal Ratings may emphasize certain factors or apply different methodologies than Agency Ratings, there are, or may in the future be, occasions when an Internal Rating is higher or lower than a corresponding Agency Rating for the same issue or issuer. Similarly, events resulting in changes in Agency Ratings will not necessarily result in changes to Internal Ratings or result in changes at similar times. For certain instruments (such as fixed income instruments issued by sovereign entities) that are not rated by a third-party credit rating agency, PIMCO may assign an implied agency rating that is derived from the long-term local currency rating of the country ("Implied Rating"). To the extent permitted by applicable Client guidelines, Internal Ratings or Implied Ratings will be used where no Agency Rating is available. Please see Appendix D for a description of certain of PIMCO's current methods of analysis and investment strategies. Certain PIMCO Funds or investment products use a combination of strategies or strategies not described in Appendix D.

Notwithstanding the foregoing, PIMCO may engage in methods of analysis and investment strategies of any and all types, which exist now or are hereafter created, and uses sub-advisers at times to effectuate any such methods of analysis or investment strategies.

Material Risks of Significant Strategies and Significant Methods of Analysis

The following is a summary of the material risks associated with the significant strategies and significant methods of analysis used by PIMCO. Investing in securities and other instruments and assets involves risk of loss that Clients should be prepared to bear; however, Clients should be aware that not all of the risks listed herein will pertain to every Account as certain risks may only apply to certain investment strategies. Furthermore, the risks listed herein are not intended to be a complete description or enumeration of the risks associated with the significant strategies and significant methods of analysis used by PIMCO. Other risks may exist now or may arise in the future.

An investment in an Account is highly risky. There can be no assurance that an Account will achieve its investment objective or any particular level of returns. An investor may lose all of its money by investing in an Account. Among other things, an Account may invest in assets that are underperforming or non-performing and/or in securities of issuers who are under financial stress. By their nature, such investments involve a high degree of financial risk, and there can be no assurance that an Account's return objectives will be realized or that there will be any return of capital. Any losses in an Account will be borne solely by investors in the Account and not by PIMCO or any of its affiliates (except to the extent they invest capital in the Account, in which case they, with respect to such capital invested, will bear their pro rata portions of such loss).

EU Alternative Investment Fund Managers Directive and UK Alternative Investment Fund Managers Regulations. Certain Accounts are likely to be considered "alternative investment funds" ("AIFs") for purposes of the European Union's Alternative Investment Fund Managers Directive 2011/61/EU, including all national, implementing or supplementary measures, laws and regulations ("AIFMD") and the United Kingdom Alternative Investment Fund Managers Regulations 2013 as amended including by the European Union (Withdrawal) Act 2018 (the "AIFM Law"), and PIMCO is considered an "alternative investment fund manager" ("AIFM"). It is possible that AIFMD or the AIFM Law could

restrict certain Accounts from being operated in the manner and on the terms envisaged by PIMCO and/or limit PIMCO's ability to carry out an Account's investment objectives or strategies. In particular, (i) AIFMD or the AIFM Law increases the regulatory burden and costs of doing business in the European Economic Area ("EEA") member states or the United Kingdom (the "UK"); (ii) AIFMD or the AIFM Law imposes extensive disclosure and/or other obligations on certain Accounts and underlying investments that are located or marketed in EEA member states or the UK, potentially disadvantaging an Account when compared to non-AIF/AIFM competitors that may not be subject to the requirements of AIFMD or the AIFM Law; and (iii) AIFMD and the AIFM Law, as applicable, restricts the marketing of certain Accounts to prospective investors in certain states within the EEA and the UK.

In certain or all EEA member states or the UK, PIMCO may choose not to market an Account at its own initiative or otherwise take any action that would result in any measure giving effect to or supplementing the AIFMD or the AIFM Law applying to PIMCO and the Account. In this respect, PIMCO may decide to only accept investors where such investors approached PIMCO at their own initiative or that any measure taken to give effect to or supplement the AIFMD or the AIFM Law would not otherwise apply to PIMCO or the Account or any person acting on their behalf. There is a risk that an EEA member state or UK regulatory or governmental authority may reach a different conclusion than PIMCO and find that the relevant measures taken in order to give effect to or supplement the AIFMD or the AIFM Law in one or more EEA member states or the UK do apply to PIMCO or the Account. Such a finding may result in a regulatory or governmental authority or court in one or more EEA member states or the UK requiring PIMCO or the Account to return any capital or other funds to investors or otherwise seeking to take other enforcement or remedial action against PIMCO and/or the Account. This may result in a reduction in the overall amount of capital available to the Account that limits, in turn, the range of investment strategies and investments that the Account is able to pursue and make or otherwise result in

a loss to the Account. Additionally, there is a risk that failure to adhere to the AIFMD or the AIFM Law could result in penalties or other sanctions, which, among other things, could limit PIMCO's ability to achieve the AIF's investment objective.

Arbitrage Risk. An Account that invests in securities purchased pursuant to an arbitrage strategy in order to take advantage of a perceived relationship between the values of two securities presents certain risks. Securities purchased or sold short pursuant to an arbitrage strategy may not perform as intended, which may result in a loss to the Account. Forecasting market movements is difficult, and securities may be mispriced or improperly valued by PIMCO. Securities issued by the same entity, or securities otherwise considered similar, may not be priced or valued similarly across markets or in the same market, and attempts to profit from pricing differences may not be successful for several reasons, including unexpected changes in pricing and valuation. To the extent an Account uses derivatives to pursue certain strategies, the Account is subject to the additional risk that the derivative's performance does not correlate perfectly, if at all, with the value of an underlying asset, reference rate or index. Additionally, issuers of a security purchased pursuant to an arbitrage strategy are often engaged in significant corporate events, such as restructurings, acquisitions, mergers, takeovers, tender offers or exchanges, or liquidations. Such events may not be completed as initially planned or may fail.

Aircraft and Aviation-Specific Risks. The supply and demand for aircraft and other aviation-related assets is affected by various cyclical and non-cyclical factors that are not under an Account's control, some of which include: (i) passenger and freight air travel demand; (ii) increased supply due to the sale of aircraft portfolios; (iii) political and other events, including war, acts of terrorism, civil unrest, outbreaks of epidemic and/or pandemic diseases, storms, weather events and natural disasters; (iv) operating costs, availability and cost of jet fuel and general economic conditions affecting airline operations; (v) governmental regulation, including new airworthiness directives issued by aviation authorities, environmental and safety

regulation, economic sanctions and export controls, statutory limits on the age of aircraft and restrictions in certain jurisdictions on the age of aircraft for import and other factors leading to the obsolescence of aircraft models; and (vi) airline governance and management ability to execute business strategies.

Asset Allocation Risk. An Account's risks directly correspond to the risks of the asset classes in which it invests. Investing in multiple asset classes (either directly or indirectly, such as through pooled investment vehicles) can facilitate diversification, but also create exposure to the risks of many different areas of the market. The direct or indirect allocation of an Account's assets among various asset classes and market sectors could cause the Account to underperform other accounts with a similar investment objective.

AMT Bonds Risk. "AMT Bonds" which are municipal securities that pay interest that is taxable under the federal alternative minimum tax applicable to non-corporate taxpayers, may expose an Account to certain risks in addition to those typically associated with municipal bonds. Interest or principal on AMT Bonds paid out of current or anticipated revenues from a specific project or specific asset may be adversely impacted by declines in revenue from the project or asset. Declines in general business activity could also affect the economic viability of facilities that are the sole source of revenue to support AMT Bonds. In this regard, AMT Bonds may entail greater risks than general obligation municipal bonds. For investors subject to the federal alternative minimum tax, a portion of an Account's distributions may not be exempt from gross federal income, which may give rise to alternative minimum tax liability.

Risks of Artificial Intelligence. PIMCO utilizes artificial intelligence, including so-called "generative AI," machine learning and natural language processing techniques (collectively "AI") in its business operations, to inform and augment its investment decision-making, client services, and other business purposes, including for potential productivity enhancements. In connection with the development, deployment and use of AI technology, as

well as other so-called “big data” analytics practices, PIMCO collects a range of data including business and personally identifiable information. PIMCO’s ability to use, manage and aggregate data may be limited by the effectiveness of its policies, systems and practices that govern how data is acquired, validated, used, stored, protected, processed and shared. Deficiencies in the practices associated with data collection, training AI technology on large data sets, and big data analytics, and difficulties approximating gaps in data, obtaining data from reliable sources, and validating data could adversely impact the accuracy and effectiveness of AI and “big data” analytics. Failure to manage data effectively and to aggregate data in an accurate and timely manner may limit PIMCO’s ability to manage current and emerging risks and changing business needs and to adapt to the use of new technologies and tools, including those involving AI. As novel uses of AI continue to proliferate, PIMCO expects that its employees and consultants will continue to explore ways to leverage AI tools and features to support day-to-day activities. While PIMCO restricts certain uses of third-party and open-source AI tools or features, PIMCO’s employees’ and consultants’ use of these third-party tools or features or ones offered by PIMCO poses additional risks relating to the protection of PIMCO’s proprietary data, including the potential exposure of PIMCO’s or its clients’ and investors’ confidential information to unauthorized recipients and the misuse of PIMCO’s or third-party intellectual property, which could adversely affect PIMCO or an Account.

Further, PIMCO may fail to utilize AI tools or features as effectively as other managers, resulting in worse performance or service. Use of AI tools may result in allegations or claims against PIMCO or an Account related to violation of third-party intellectual property rights, violation of data privacy rights, unauthorized access to or use of proprietary information, breach of contractual obligations, and failure to comply with open-source software requirements. Additionally, AI tools may produce biased, inaccurate, misleading, incomplete, or otherwise flawed outputs that could be hard to detect and lead to errors in PIMCO’s and its employees’ and

consultants’ decision-making, portfolio management or other business activities, which could have a negative impact on PIMCO or on the performance of an Account. To the extent we use such outputs in informing our actions, we could incur operational inefficiencies, competitive harm, brand or reputational harm, or other adverse impacts on our business and operations. Such AI tools or features could also be used against PIMCO or an Account in criminal or negligent ways including in connection with heightened cybersecurity risks. As the use and availability of AI tools and features have grown, AI has continued to be subject to evolving laws and regulations and receive scrutiny under evolving regulatory expectations. The U.S. Congress and a number of U.S. federal and state agencies have been examining the use of AI in a variety of industries, including financial services. These agencies have issued, proposed, or adopted a variety of rules and other guidance regarding the use of AI. PIMCO could face regulatory scrutiny or litigation relating to the use of big data and our data collection practices, including for alleged violation of third-party privacy and intellectual property rights, or other rights, or alleged breach of contractual obligations, such as limitations on the use of data. A user may input confidential information, including material non-public information or personal identifiable information, into AI tools, resulting in such information becoming part of a dataset that is accessible by third-party AI tools and users, and could subject us to legal or regulatory investigations or action. AI similarly faces an uncertain regulatory landscape in many foreign jurisdictions.

On August 1, 2024, the Artificial Intelligence Act (Regulation (EU) 2024/1689) (“EU AI Act”) came into force, which applies to operators within the entire value chain for certain artificial intelligence systems and the data used to train, test and deploy these systems. The EU AI Act introduces obligations in phases, with the majority of obligations being enforceable from August 2, 2026. In the UK, the government pledged in July 2024 to introduce legislation imposing obligations on developers of the most powerful AI models. This framework is expected to take the form of a principles-based regime intended to foster the growth and development of AI

technologies. No formal information has been released, but an AI bill is expected to be introduced to Parliament in 2025, and sector-specific guidance has already been published by regulators in the UK, including the Competition and Markets Authority and the Information Commissioner's Office. The enactment or expansion of laws and regulations related to the use of AI in PIMCO's operations could result in increased compliance costs. Ongoing and future regulatory actions with respect to AI generally or AI's use in any industry in particular may alter, perhaps to a materially adverse extent, the ability of PIMCO or an Account to utilize AI in the manner it has or has planned to to-date and may have an adverse impact on the ability of PIMCO or an Account to continue to operate as intended.

Banking Risk. An Account will maintain funds with one or more banks or other depository institutions ("Banking Institutions"), which may include U.S. and non-U.S. Banking Institutions, and will enter into credit facilities or have other financial relationships with Banking Institutions. Not all such Accounts will be custodial accounts and have the protections associated with custodial accounts. The distress, impairment or failure of one or more Banking Institutions with whom the Account, its portfolio investments, and/or PIMCO transact may inhibit the ability of the Account or its portfolio investments to access depository accounts or lines of credit at all or in a timely manner. In such cases, the Account may be forced to delay or forgo investments or to call capital when it is not otherwise desirable to do so, resulting in lower performance for the Account. In the event of such a failure of a Banking Institution where the Account or one or more of its portfolio investments hold depository accounts access to such accounts could be restricted and FDIC protection may not be available for balances in excess of amounts insured by the FDIC (and similar considerations may apply to Banking Institutions in other jurisdictions not subject to FDIC protection). In such instances, the Account and its affected portfolio investments may not recover such excess, uninsured amounts and instead, would only have an unsecured claim against the Banking Institution and participate pro rata with other unsecured creditors in the residual value

of the Banking Institution's assets. The loss of amounts maintained with a Banking Institution or the inability to access such amounts for a period of time, even if ultimately recovered, could be materially adverse to the Account or its portfolio investments. One or more investors could also be similarly affected and unable to fund capital contributions, further delaying or deferring new investments. In addition, PIMCO may not be able to identify all potential solvency or stress concerns with respect to a Banking Institution or to transfer assets from one bank to another in a timely manner in the event a Banking Institution comes under stress or fails. Even if Banking Institutions with whom the Account, its portfolio investments, and/or PIMCO transact remain solvent during times of economic stress, volatility in the banking sector could contribute to, cause or intensify an economic recession, increase the costs of capital and banking services or result in such entities being unable to obtain or refinance indebtedness at all or on as favorable terms as could otherwise have been obtained.

Call Risk. An Account that invests in fixed income securities will be subject to the risk that an issuer may exercise its right to redeem (i.e. call) a fixed income security earlier than expected (a call). Issuers may call outstanding securities prior to their maturity for a number of reasons, including declining interest rates, changes in credit spreads, and improvements in the issuer's credit quality. If an issuer calls a security that an Account has invested in, the Account may not recoup the full amount of its initial investment or may not realize the full anticipated earnings from the investment and may be forced to reinvest in lower-yielding securities, securities with greater credit risks or securities with other, less favorable features.

Carbon Markets and Carbon Credit Trading. Unlike traditional securities and commodities (e.g., oil and gas) markets, mandatory carbon markets are unique because the primary driver of demand is the existence of a regulatory framework imposing legal obligations or incentives that drive market participation, for example the obligation on certain operating entities that need to procure allowances or offsets to comply with law and

establishing a market for the sale and purchase of such carbon credits, including offsets, in which an Account may invest. Accordingly, and as international experience has previously demonstrated, carbon markets are sensitive to regulatory developments and prices can vary widely based on governmental decisions, inaction or change in policies.

An Account may invest in transferable instruments whose value is linked to underlying quotas such as carbon credits. The trading markets for carbon credits are still developing and therefore do not possess the attributes of a fully developed market which may cause illiquidity, high price volatility and a diminished demand for carbon credits. Price movements of carbon credits are influenced by, among other things, their current and perceived future market value, the price of natural gas and coal, weather patterns and the level of world economic activity. In addition, international and national regulation of the carbon credit market is still developing and may change in response to new legislation, treaties or other governmental regulation, which may have an adverse impact on an Account. The infrastructure in connection with the issuance and transfer of certain carbon credits is still developing. Therefore, the timing and volume of delivery of such credits can be uncertain and may be subject to transfer disruptions.

Climate Change and Severe Weather Risk. An Account may acquire investments that are located in, or have operations in, areas which are susceptible to the risks associated with climate change or severe weather events, which may cause the Account to underperform. For example, any investments located in coastal regions may be affected by future increases in sea levels or in the frequency or severity of hurricanes and tropical storms, whether such increases are caused by global climate changes or other factors. There may be significant physical impacts of climate change that have the potential to have a material effect on the Account's business and operations. Physical impacts of climate change may include (but are not limited to): increased storm intensity and severity of weather (e.g., floods or hurricanes); sea level rise; fires; droughts; and extreme

and changing temperatures. As a result of these impacts from climate-related events and severe weather events more generally, an Account may be vulnerable to the following non-exhaustive list of risks: property damage to the Account's investments; indirect financial and operational impacts from disruptions to the operations of the Account's investments from severe weather; increased insurance premiums and deductibles or a decrease in the availability of coverage for investments in areas subject to severe weather; decreased net migration to areas in which investments are located, resulting in lower than expected demand for both investments and the products and services of the Account's investments; increased insurance claims and liabilities; increase in energy and/or other costs impacting operational returns; changes in the availability or quality of water, food or other natural resources on which the Account's business depends; decreased demand for consumer and other products or services resulting from physical changes associated with climate change or severe weather events more generally (e.g., warmer temperature, decreasing shoreline or fires could reduce demand for residential and commercial properties previously viewed as desirable); incorrect long-term valuation of an equity investment or risks relating to a debt instrument due to changing conditions not previously anticipated at the time of the investment; and economic distributions arising from the foregoing.

CFIUS & National Security/Investment Clearance.

Certain investments by an Account that involve a business connected with or related to national security (including critical technology, critical infrastructure, or sensitive data) may be subject to review and approval by the Committee on Foreign Investment in the United States ("CFIUS") and/or non-U.S. national security/investment clearance regulators. In the event that CFIUS or another regulator reviews one or more of an Account's proposed or existing investments, it is possible that CFIUS or another regulator will seek to impose limitations on or prohibit one or more of an Account's investments or unwind a transaction. Such limitations or restrictions may prevent an Account from pursuing certain investments, cause delays with respect

to consummating such investments or require an Account to consummate an investment on terms that are less advantageous than would be the case absent such restrictions. Where an Account is required to unwind a transaction, in addition to incurring additional legal, administrative and other costs, an Account may have to dispose of the investment at a price that is less than it would have received had PIMCO managed the investment to exit at a different time or under different circumstances. Any of these outcomes could adversely affect an Account's performance with respect to such investments, and thus the Account's performance as a whole.

Collateralized Debt Obligation Risks and Other Structured Products.

The following risks are more extensively described in the relevant offering documents. The risks of an investment in a CDO depend largely on the type of the collateral securities and the class of the CDO in which an Account invests. In addition to the risks associated with investment in such underlying assets, the structure and characteristics of a CDO present certain additional risks. Due to the complex nature of a CDO, an investment in a CDO may not perform as expected. An investment in a CDO also is subject to the risk that the issuer and the investors may interpret the terms of the instrument differently, giving rise to disputes. Normally, collateralized bond obligations ("CBOs"), CLOs, and other CDOs are privately offered and sold, and thus, are not registered under the securities laws. CDOs are subject to the typical risks associated with fixed income securities. In addition to the other risks associated with investment in fixed income securities, investing in CDOs may entail a variety of unique risks. Among other risks, CDOs may be subject to prepayment risk, credit risk, liquidity risk, market risk, structural risk, legal risk and interest rate risk (which may be exacerbated if the interest rate payable on a structured financing changes based on multiples of changes in interest rates or inversely to changes in interest rates). For CBOs, CLOs, and CDOs, cash flows are split into two or more portions, called tranches, varying in risk and yield. The riskiest portion is the "equity" tranche (i.e., subordinated debt) which bears the first loss from any defaults from the bonds or loans in the CDO,

CBO, or CLO, although more senior tranches may also bear losses. Additional risks of CDOs, CBOs, and CLOs include, without limitation (i) the possibility that distributions from collateral securities will be insufficient to make interest or other payments; (ii) the possibility that the quality of the collateral may decline in value or default; and (iii) the performance of a structure of the issuer thereof, the availability of any credit enhancement, the level and timing of payments and recoveries on and the characteristics of the underlying receivables, loans or other assets that are being securitized, remoteness of those assets from the originator or transferor, the adequacy of and ability to realize upon any related collateral and the capability of the servicer of the securitized assets, (iv) the price of a structured finance investment, if required to be sold, may also be subject to certain market and liquidity risks for securities of its type at the time of sale, (v) if the particular structured product is invested in a security in which an Account is also invested, this would tend to increase an Account's overall exposure to the credit of the issuer of such securities, at least on an absolute, if not on a relative basis, (vi) the assets collateralizing any CDO may have more correlated performance than expected at the time of structuring such CDO and therefore may perform worse than projected in a default scenario, (vii) the issuer and the investors may interpret the terms of the instrument differently, giving rise to disputes with the issuer or among investors regarding the characterization of proceeds or unexpected investment results, and (viii) losses caused by defaults on underlying assets are borne first by the holders of subordinate tranches. Tranches are categorized as senior, mezzanine and subordinated/equity, according to their degree risk. If there are defaults or the CLO's collateral otherwise underperforms, scheduled payments to senior tranches take precedence over those of mezzanine tranches, and scheduled payments to mezzanine tranches take precedence over those of subordinated/equity tranches.

Commodity Risk. An Account's investments in commodity-linked investments, including physical commodities and commodity derivatives, may subject the Account to greater volatility than investments in

traditional securities. The value of physical commodity-linked investments may be affected by changes in overall market movements, foreign currency exchange rates, commodity index volatility, changes in inflation, interest rates, or supply and demand factors affecting a particular industry or underlying commodity market, such as climate changes, weather, livestock disease, pandemics and public health emergencies, embargoes, taxation, war, terrorism, cyber hacking, economic and political developments, environmental proceedings, tariffs, changes in storage costs, availability of transportation systems, and international economic, political and regulatory developments. To the extent an Account concentrates assets in a particular sector of the commodities market (such as oil, metal, digital assets deemed to be commodities, environmental or agricultural products), it may be more susceptible to risks associated with those sectors. An Account's investments in physical commodities or digital assets deemed to be commodities may be subject to additional risks associated with theft, fraud, cyber hacking, and failure to make or take delivery of the commodity, which may result from the failure of counterparties, clearinghouses or other intermediaries to fulfill delivery obligations, or from operational complications associated with the holding, settlement, or custody of the physical commodity, all of which may result in loss to the Account. The prices for commodities in those sectors may fluctuate widely due to factors such as supply and demand disruptions in major producing or consuming regions, and governmental regulatory policies. Further, PIMCO's ability to invest in certain commodity interests may be limited due to applicable regulations pertaining to position limits.

Risks of Conflict. Recently, various countries have experienced significant geopolitical conflicts, including civil wars, which may have had an adverse impact on the securities markets of the countries concerned. In addition, the occurrence of new disturbances due to acts of war or terrorism or other political developments may occur. Apparently stable systems may experience periods of disruption or improbable reversals of policy. Nationalization, expropriation or confiscatory taxation,

currency blockage, political changes, government regulation, political, regulatory or social instability or uncertainty or diplomatic developments, including the imposition of sanctions, trade restrictions, or other similar measures, could adversely affect an Account's investments whether or not the Account is directly invested in the affected jurisdiction or impacted area. The transformation from a centrally planned, socialist economy to a more market-oriented economy has also resulted in many economic and social disruptions and distortions. Moreover, there can be no assurance that the economic, regulatory and political initiatives necessary to achieve and sustain such a transformation will continue or, if such initiatives continue and are sustained, that they will be successful or that such initiatives will continue to benefit foreign (or non-national) investors. Certain instruments, such as inflation index instruments, may depend upon measures compiled by governments (or entities under their influence) which are also the obligors. Recent examples of the above include conflict, loss of life and disaster connected to ongoing armed conflict between Russia and Ukraine in Europe and Hamas and Israel in the Middle East, and an example of a country undergoing transformation is Venezuela. The extent, duration and impact of these conflicts, related sanctions, trade restrictions, and retaliatory actions are difficult to ascertain, but could be significant and have severe adverse effects on the region, including significant adverse effects on the regional or global economies and the markets for certain securities, commodities and currencies. Depending on the nature of the military conflict, companies worldwide operating in many sectors, including energy, financial services, and defense may be impacted. These impacts could result in restricted or no access to certain markets, investments, service providers or counterparties, thus negatively affecting an Account's investments in securities and instruments that are economically tied to the applicable region and include (but are not limited to) declines in value and reductions in liquidity. Increased volatility, currency fluctuations, liquidity constraints, counterparty default, valuation and settlement difficulties and operational risk resulting from such conflicts may also negatively impact the

performance of an Account. Such events may result in otherwise historically “low risk” strategies performing with unprecedented volatility and risk. In addition, to the extent new sanctions or trade restrictions are imposed or previously relaxed sanctions are re-imposed (including with respect to countries undergoing transformation), such sanctions or trade restrictions may result in adverse impacts as described in “Sanctions, Anti-Corruption, Anti-Money Laundering and Related Considerations.” Any of these outcomes could adversely affect an Account’s performance with respect to such investments, and thus an Account’s performance as a whole.

Consumer Loans. Certain Accounts may hold or be exposed to consumer loans, including credit card receivables, automobile loans, student loans, peer-to-peer loans, litigation finance loans, unsecured consumer credit loans, or other loans. These loans are subject to risks of prepayment, delinquency, foreclosure and other risks default similar to those present in mortgage loans. Consumer loans may be backed by collateral (as in automobile loans) or they may be unsecured, exposing the Account to default risk as an unsecured creditor of an individual borrower. Congress, regulators such as the Consumer Financial Protection Bureau and the individual states may further regulate the consumer credit industry in ways that make it more difficult for servicers of such loans to collect payments on such loans, resulting in reduced collections. Changes to federal or state bankruptcy or debtor relief laws may also impede collection efforts or alter timing and amount of collections. Please see “Government and Regulatory Risk” below.

Control Positions Risk. An Account may seek investment opportunities that allow the Account to have a meaningful influence on the management, operations and strategic direction of one or more portfolio investments in which it invests. The exercise of control over an investment may impose additional risks of liability for environmental damage, product defects, failure to supervise management, pension and other fringe benefits, violation of governmental regulations (including securities laws, anti-corruption laws, anti-money laundering laws, and economic sanctions) or

other types of liabilities, particularly when the portfolio company operates in a regulated industry. The exercise of control and/ or meaningful influence over a portfolio company could expose the assets of an Account to claims by such portfolio company, its security holders and its creditors, which may lead to losses for the Account. In addition, the exercise of control and/or meaningful influence may subject an Account to certain bankruptcy or securities law restrictions or requirements, which could (among other things) impact the liquidity of an Account’s investment and/or subject the Account to filing or reporting requirements.

Corporate Debt Securities Risk. Corporate debt securities include corporate bonds, debentures, notes (which are transferable securities listed or traded on a regulated market) and other similar corporate debt instruments, including convertible securities. Debt securities may be acquired with warrants attached. Corporate income-producing securities may also include forms of preferred or preference stock. The rate of interest on a corporate debt security may be fixed, floating or variable, and may vary inversely with respect to a reference rate. The rate of return or return of principal on some debt obligations may be linked or indexed to the level of exchange rates between the USD and a different currency or currencies. In addition, corporate debt securities may be highly customized and as a result may be subject to, among others, liquidity risk and pricing transparency risks.

Corporate debt securities are subject to the risk of the issuer’s inability to meet principal and interest payments on the obligation and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity. When interest rates rise, the value of corporate debt securities can be expected to decline. Debt securities with longer maturities tend to be more sensitive to interest rate movements than those with shorter maturities. Company defaults can impact the level of returns generated by corporate debt securities. An unexpected default can reduce income and the capital value of a corporate debt security. Furthermore,

market expectations regarding economic conditions and the likely number of corporate defaults may impact the value of corporate debt securities.

Credit Risk. An Account could lose money if the issuer or guarantor of a fixed income security (including a security purchased with securities lending collateral), the counterparty to a derivatives contract or a repurchase agreement, a borrower of portfolio securities, or the issuer or guarantor of collateral, is unable or unwilling, or is perceived (whether by market participants, rating agencies, pricing services or otherwise) as unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations. The risk that such issuer, guarantor or counterparty is less willing or able to do so is heightened in market environments where interest rates are rising. The downgrade of the credit rating of a security or of the issuer of a security held by the Account may decrease its value. Securities are subject to varying degrees of credit risk, which are often reflected in credit ratings. Measures such as average credit quality may not accurately reflect the true credit risk of the Account. This is especially the case if the Account consists of securities with widely varying credit ratings. Therefore, an Account with an average credit rating that suggests a certain credit quality may in fact be subject to greater credit risk than the average would suggest. This risk is greater to the extent an Account uses leverage or derivatives in connection with the management of the Account, which would be magnified in the event that initial or variation margin is not provided by the counterparty to such transactions (or not provided below a certain threshold amount).

CSDR Related Risk. The European Union has adopted a settlement discipline regime under Regulation (EU) No 909/2014 and the Settlement Discipline RTS as they may be modified from time to time ("CSDR"). It aims to reduce the number of settlement fails that occur in EEA central securities depositories ("CSDs") and to address settlement fails where they occur. The key elements of the regime are: (i) cash penalties - EEA CSDs are required to impose cash penalties on participants that cause settlement fails and distribute these to receiving

participants affected by settlement fails; and (ii) allocations and confirmations - EEA investment firms are required to take measures to prevent settlement fails, including putting in place arrangements with their professional clients to communicate securities allocations and transaction confirmations. Mandatory buy-ins remain a part of the regulation but are not currently implemented. The mandatory buy-in process may be implemented under the regulation if it were considered necessary to address the level of settlement fails in the European Union and certain other conditions were met.

These requirements apply to transactions in transferable securities (e.g., shares and bonds), money market instruments, units in funds and emission allowances that are to be settled via an EEA CSD and, in the case of any mandatory buy-in requirements only, are admitted to trading or traded on an EEA trading venue or cleared by an EEA central counterparty (except, in the case of shares and cash penalties or any mandatory buy-out process, if the principal trading venue for trading in the shares is located outside of the EEA).

The implementation of the CSDR settlement discipline regime for Accounts that enter into in-scope transactions may result in increased operational and compliance costs being borne directly or indirectly by such Account. If in-scope transactions are subject to additional expenses and penalties as a consequence of the CSDR settlement discipline regime, such expenses and penalties may be charged to the Account depending upon their characterization.

Currency Risk. If an Account invests directly in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, non-U.S. currencies, or in derivatives or other instruments that provide exposure to non-U.S. currencies, it will be subject to the risk that those currencies will decline in value relative to the U.S. dollar, or, in the case of hedging positions, that the U.S. dollar will decline in value relative to the currency being hedged. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest or inflation rates, balance of payments and governmental surpluses or

deficits, intervention (or the failure to intervene) by U.S. or foreign governments, central banks or supranational entities such as the International Monetary Fund, or by the imposition of currency controls or other political developments in the U.S. or abroad. As a result, an Account's investments in or exposure to non-U.S. currencies and/or non-U.S. currency-denominated securities may reduce the returns of the Account. Currency risk may be particularly high to the extent that an Account invests in non-U.S. currencies or engages in non-U.S. currency transactions that are economically tied to emerging market countries. Please see "Emerging Markets Risk" below.

Although an Account may attempt to hedge its currency exposure into the U.S. dollar, it may not be successful in reducing the effects of currency fluctuations. An Account may also hedge from one foreign currency to another. An Account's use of currency hedging may not be successful, and the use of such strategies may lower an Account's potential returns.

Custodial Risk. A custodian will have custody of an Account's assets, including securities, cash, distributions and rights accruing to an Account's securities accounts. If the custodian holds cash on behalf of an Account, an Account may be an unsecured creditor in the event of the insolvency of the custodian. An Account will be subject to credit risk and operational risk with respect to the custodian. Operational and other risks, including risk of failed settlement, may be exacerbated by the shortening of the standard settlement cycle for numerous U.S. securities, including for example, if securities purchased for an Account have a shorter settlement cycle than securities being sold. In addition, an Account will be subject to compliance processes, procedures, and restrictions of the custodian, some of which may be more restrictive than the law requires and that may impact the ability of the Account to conduct transactions. A Custodian may hold an Account's securities through third parties such as clearing corporations, other brokers or banks. In addition, certain of an Account's assets may be held by non-U.S. affiliates of the Account's Custodian and entities not affiliated with

the Custodian. Assets held by such non-U.S. affiliates or third parties may be subject to legal regimes that provide fewer or different investment protections than the U.S. (including with respect to the priority of any claims that an Account may have upon a bankruptcy, insolvency or liquidation of any affiliate, which may result in an Account being an unsecured creditor of such affiliate rather than having a priority "customer" claim). Placement of the Custodian or any of its affiliates or other sub-custodian in bankruptcy or a similar proceeding outside of the U.S. could result in a great deal of uncertainty as to the status of assets or the ultimate recovery, if any, of such assets held by such custodian. Clients should consult directly with their Custodian for additional information on such arrangements.

Cyber Security Risk. As the use of complex information technology and communications systems, including cloud-based technology, has become more prevalent and interconnected in the course of business, Accounts have become potentially more susceptible to operational and information security risks resulting from breaches in cyber security despite the efforts of PIMCO, an Account or their service providers to adopt technologies, processes, and practices intended to mitigate these risks. Disruptions or failures that affect service providers, counterparties, market participants, or issuers of securities held by an Account may adversely affect PIMCO or an Account, including by causing losses or impairing PIMCO's or an Account's operations. Information relating to an Account's investments has been and will in the future be delivered electronically, which can give rise to a number of risks, including, but not limited to, the risks that such communications may contain computer viruses or other defects, may not be accurately replicated on other systems, or may be intercepted, deleted or interfered with, without the knowledge of the sender or the intended recipient.

A breach in cyber security refers to both intentional and unintentional cyber events that may, among other things, cause an Account to lose proprietary information, suffer data corruption and/or destruction or lose operational

capacity, result in the unauthorized release or other misuse of confidential information, or otherwise disrupt normal business operations. Cyber security breaches may involve unauthorized access to the digital information systems that support an Account (e.g., through “hacking,” ransomware or malicious software coding) or outside attacks such as denial-of-service attacks (i.e., efforts to make network services unavailable to intended users), but may also result from intentionally or unintentionally harmful acts of PIMCO personnel. In addition, cyber security breaches involving third-party Service Providers that provide services to PIMCO or an Account (including but not limited to vendors, advisers, sub-advisers, administrators, transfer agents, regulatory authorities, custodians, registry operators, distributors and other third parties), trading counterparties, and issuers in which an Account invests can also subject an Account to many of the same risks associated with direct cyber security breaches. Geopolitical tensions can increase the scale and sophistication of deliberate cybersecurity attacks, particularly those from nation-states or from entities with nation-state backing, who may desire to use cybersecurity attacks to cause damage or create leverage against geopolitical rivals. PIMCO’s use of cloud-based Service Providers could heighten or change these risks. In addition, work-from-home arrangements by PIMCO or its service providers could increase all of the above risks, create additional data and information accessibility concerns, and make an Account, PIMCO or their service providers susceptible to operational disruptions, any of which could adversely impact their operations.

Cyber security failures or breaches may result in financial losses to an Account. For example, cyber security failures or breaches involving trading counterparties or issuers in which an Account invests could adversely impact such counterparties or issuers and cause an Account’s investment to lose value. Cyber security failures or breaches may also result in significant disruptions to the business operations of PIMCO, its Service Providers, or other third parties; impediments to trading; violations of applicable privacy and other laws; regulatory fines; penalties; reputational damage; reimbursement or other compensation costs; increased insurance premiums,

additional compliance and cyber security risk management costs and other adverse consequences. In addition, PIMCO may incur substantial costs related to investigation and remediation of the cybersecurity incident, increasing and upgrading cybersecurity protections including its administrative, technical, organizational and physical controls, acts of identity theft, unauthorized use or loss of proprietary information, adverse investor reaction, increased insurance premiums or difficulties obtaining insurance coverage, or litigation, regulatory actions or other legal risks.

PIMCO has established business continuity plans and risk management systems designed to reduce the risks associated with cyber security failures or breaches. However, there are inherent limitations in these plans and systems, including that certain risks may not have been identified, in large part because different or unknown threats may emerge in the future. As such, there is no guarantee that such efforts will succeed, especially because PIMCO does not directly control the cyber security systems of issuers, trading counterparties, Service Providers or other third parties and because threat actors are continuously evolving their methods of attack. This evolution has been substantial over recent years, and PIMCO or third parties may fail to keep pace with the evolution in the threat landscape. There is also a risk that cyber security breaches may not be detected.

Data Source Risk. PIMCO uses a variety of proprietary and non-proprietary data to evaluate securities and formulate investment advice. If such data feeds become corrupted, compromised, or discontinued in any material manner, or become undeliverable or inaccessible in a timely manner, PIMCO’s investment models may not be properly formulated. The failure to receive the data feeds or receive the data feeds in a timely manner may leave an Account unable to trade, and may expose the Account to risk of loss or loss of opportunities, especially if the loss of the data feed coincides with turbulent market conditions. PIMCO also subscribes to external data sources for various purposes and functions, including in making investment decisions. While PIMCO believes

those third-party data sources to be generally reliable, PIMCO does not guarantee that the data received will be accurate or complete and is not responsible for errors by these sources.

Derivatives Risk. Derivatives are financial contracts whose value depends on, or is derived from, the value of an underlying asset, reference rate or index. A variety of derivatives may be available to an Account, depending on the specific type of Account and the applicable offering documents and/or investment guidelines. In implementing certain of its significant investment strategies, PIMCO may use derivatives as a substitute for taking a position in the underlying asset, as part of strategies designed to gain exposure to, for example, issuers, portions of the yield curve, indices, sectors, currencies, and/or geographic regions, and/or to reduce exposure to other risks, such as interest rate, credit (e.g., Credit Default Swaps), or currency risk. PIMCO may also use derivatives for leverage, in which case their use would involve leveraging risk, and in some cases, may subject an Account to the potential for unlimited loss (e.g., when using call options). The use of derivatives or other similar instruments may cause an Account's investment returns to be impacted by the performance of assets such Account does not own and result in such Account's total investment exposure exceeding the value of its portfolio. An Account's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Derivatives are subject to a number of risks described elsewhere in this section, such as liquidity risk (which may be heightened for highly-customized derivatives, and in the event of a credit event or default of the underlying asset), interest rate risk, market risk, call risk, leverage risk, counterparty (including credit) risk, emerging markets risk, corporate debt securities risk, operational risk (such as documentation issues, settlement issues and systems failures), legal risk, and management risk, risks arising from margin requirements and risks arising from mispricing or valuation complexity (including the risk of improper valuation), governmental risk, as well as the risks associated with the underlying asset, reference rate

or index, or risks associated with sanctions. Derivatives also involve the risk that changes in the value of a derivative instrument may not correlate perfectly with, or may be more sensitive to market events than, its underlying asset, rate or index. In that event, derivatives entered into for an Account might not accomplish their objective and could result in losses to an Account or increased losses incurred on a portfolio asset. An Account investing in a derivative could lose more than the initial amount invested and derivatives may increase the volatility of an Account, especially in unusual or extreme market conditions. Certain derivatives have the potential for unlimited loss regardless of the size of the initial investment. The 1940 Act and related rules no longer require asset segregation for derivatives transactions; however, asset segregation may still be utilized for risk management or other purposes. An Account may be required to hold additional cash or sell other investments in order to obtain cash to close out a position and changes in the value of a derivative may also create margin delivery or settlement payment obligations for an Account. Non-centrally-cleared over-the-counter ("OTC") derivatives are also subject to the risk that a counterparty to the transaction will not fulfill its contractual obligations to the other party, as many of the protections afforded to centrally-cleared derivatives may not be available for non-centrally cleared OTC derivatives. While derivatives that are centrally cleared generally are expected to have lower counterparty risk than OTC derivatives, central clearing does not eliminate counterparty risk.

Derivatives that are cleared by a central clearing organization can still be subject to different risks, including the creditworthiness of the central clearing organization and its members.

In addition, derivatives that are traded on an exchange are subject to the risk that an exchange may limit the maximum daily price fluctuation of a derivative contract and restrict or suspend trading of a contract that has reached a limit. Such limit governs only price movements of a contract during a particular trading day and therefore does not limit potential losses because the limit

may work to prevent the liquidation of unfavorable positions. A daily limit may be reached for several consecutive days with little or no trading.

In evaluating the risks and contractual obligations associated with particular derivative instruments or other similar investments, it is important to consider that certain derivative transactions may be modified or terminated, absent a default or termination event, only by mutual consent of an Account and its counterparty, and certain derivative transactions may be terminated before their scheduled termination date by the counterparty or an Account, as the case may be, including upon the occurrence of certain Account-related or counterparty-related events, which may result in losses or gains to an Account based on the market value of the derivative transactions entered into between the Account and the counterparty. Upon the expiration or termination of a particular contract, an Account may be unable to maintain a desired investment exposure or hedge position as had been expressed by such contract if the counterparty to such contract is unwilling to enter into a new contract and no other appropriate counterparty can be found, which could cause losses to the Account. Furthermore, after such an expiration or termination of a particular contract, an Account may have fewer counterparties with which to engage in additional derivative transactions, which could lead to potentially greater counterparty risk exposure to one or more counterparties, and which could increase the cost of entering into certain derivatives. In such cases, the Account may lose money. Derivatives used for hedging or risk management may not operate as intended or may expose an Account to additional risks. In addition, derivatives used for hedging may partially protect an Account from the risks they were intended to hedge but not fully mitigate the impact of such risks.

The regulation of the derivatives markets has increased over the past several years, and implementation of current regulations with respect to derivatives markets as well as additional future regulation of such markets may make derivatives more costly, may limit the availability or reduce the liquidity of derivatives, or may otherwise

adversely affect the value or performance of derivatives. For example, derivatives transactions in which the Account may engage are either now or may in the future be subject to mandatory central clearing of transactions which includes additional margin requirements and in certain cases trading on electronic platforms, pre-and post-trade transparency reporting requirements and mandatory bilateral exchange of variation and initial margin for non-cleared swaps. Counterparty credit risk with respect to derivatives has also been impacted by rules and regulations adopted in the U.S., the EU, the UK and certain other jurisdictions. These rules and regulations will affect the derivatives market and may significantly eliminate, delay and/or modify an Account's ability to exercise remedies, such as the termination of transactions, netting of obligations, and realization on collateral in the event of an insolvency of its counterparties (or their affiliates). In some cases, such rules and regulations would permit the liabilities of such counterparties to an Account to be reduced, eliminated, or converted to equity (sometimes referred to as a "bail in"). These and other regulatory developments may impair the effectiveness or raise the costs of an Account's derivative transactions, impede the effective implementation of the Account's derivatives strategies, or adversely affect the Account's performance. Please see "Government and Regulatory Risk" below.

Digital Assets. Certain Accounts may enter into derivatives contracts based on Bitcoin, Ether, or other digital assets or may hold and/or invest in digital assets directly, including, but not limited to, Bitcoin and/or Ether and may also purchase securities, including funds, which invest in such digital assets. Digital assets, including "blockchain" assets, digital "tokens" and "cryptocurrencies", are part of a new and rapidly evolving industry that is subject to a high degree of volatility in value/price and regulatory uncertainty. Most digital currencies are not issued or backed by any government, bank, or central organization, but instead only exist on online, peer-to-peer, distributed networks that act as a public and immutable record of all transactions in the underlying digital currency.

Digital asset prices have been subject to periods of excessive volatility in the past, and such periods can be expected to recur. Price volatility is influenced by many unpredictable factors, such as market perception, the development of competing digital assets, changes in government regulation, the occurrence of an adverse incident relating to one or more digital assets (including stablecoins and digital assets not held by Accounts), inflation rates, interest rate movements, and general economic and political conditions. In addition, digital assets have no centralized pricing source which may pose valuation challenges. Further, digital asset networks face significant scaling challenges that can lead to high fees or slow transaction settlement times, and efforts to increase the volume and speed of transactions on digital networks may not be successful. In addition, if the digital asset award for mining or validating blocks and transaction fees for recording transactions on a digital network are not sufficiently high to incentivize miners or validators, they may cease expanding processing power or demand high transaction fees, which could negatively impact the value of digital assets.

Digital assets that utilize blockchain technologies were only introduced relatively recently, and the medium-to-long term value of digital assets is subject to a number of factors relating to the capabilities and development of blockchain technologies and to the fundamental investment characteristics of digital assets. Digital asset networks, including the Bitcoin and the Ethereum networks, are part of a new and rapidly evolving industry, and the value of digital assets depends on the development and acceptance of these digital asset networks. Changes and proposed changes in the governance of a digital asset network may not receive sufficient support from users and miners or validators, which may negatively affect that digital asset network's ability to grow and respond to challenges. Moreover, in the past, flaws in the source code for digital assets have been exposed and exploited, including flaws that disabled some functionality for users and/or resulted in the theft of users' digital assets. The cryptography underlying certain digital assets could prove to be flawed or ineffective, or developments in mathematics and/or

technology, including advances in digital computing, algebraic geometry and quantum computing, could result in such cryptography becoming ineffective. In any of these circumstances, a malicious actor may be able to take an Account's digital assets, which would adversely affect the value of the Account. Separate from the cybersecurity risks of digital asset networks, entities that custody or facilitate the transfers or trading of digital assets have been frequent and successful targets of cybersecurity attacks, leading to significant theft of digital assets. Entities that custody or facilitate the transfers or trading of digital assets, including large and well-established entities, have also been the subject of allegations of fraud, regulatory violations (including with respect to money laundering), malfeasance and mismanagement, resulting in substantial losses for customers and material adverse impacts on the digital assets markets generally.

For the reasons discussed above or for other reasons, functionality of a digital asset network may be negatively affected such that it is no longer attractive to users, thereby dampening demand for the applicable digital asset. In addition, if a digital asset held by an Account is determined to be a "security" by the SEC or another U.S. or non-U.S. regulator, it may adversely affect the value or functionality of the digital asset.

The manner in which ownership of digital assets is recorded and managed introduces unique risks. For example, a unique private key is required to access, use or transfer a digital asset on a blockchain or distributed ledger. Digital asset balances are generally maintained as an address on the blockchain and are accessed through private keys, which may be held by a market participant or a custodian. Although digital asset transactions are typically publicly available on a blockchain or distributed ledger, the public address does not identify the controller, owner or holder of the private key. Unlike bank and brokerage accounts, exchanges and custodians that hold digital assets do not always identify the owner. The opaque underlying or spot market poses asset verification challenges for market participants, regulators and auditors and, as a result, there is an increased risk of

manipulation and fraud, including the potential for Ponzi schemes, bucket shops and pump and dump schemes which could adversely impact the value of digital assets and digital asset derivatives.

Accounts may trade digital assets on an over-the-counter basis or on a digital asset exchange. Opportunities to trade digital assets OTC may be limited, and OTC platforms may impose minimum trade size or other requirements that an Account is unable to satisfy. Exchanges on which digital assets trade generally are relatively new and largely unregulated, and may therefore be more exposed to fraud, mismanagement and failure than established, regulated exchanges for other products.

Any fraud, manipulation, security failure or operational problems experienced by digital asset trading venues could result in a reduction or complete loss in the value of the digital assets. Furthermore, many such digital asset trading venues, including digital asset exchanges and over the counter trading venues, do not provide the public with significant information regarding their ownership structure, management teams, corporate practices, regulatory compliance or the assets backing customer deposits. Unlike broker-dealers registered with the SEC, digital asset exchanges are not required to maintain possession of the digital assets deposited by customers. As a result, digital assets held in an account at an exchange are subject to the risk that the exchange operator may sell, lend or otherwise rehypothecate those digital assets, subjecting them to risk of loss, or that those digital assets may be lost as a result of fraud or other bad acts of the exchange operator or its employees. To the extent that a digital asset exchange, as a result of fraud, the rehypothecation of customer assets or otherwise, becomes insolvent or fails to return its customers' digital assets upon a withdrawal request, the rights of the exchange's customers to recover deposited digital assets are uncertain and those customers could incur material losses. As a result, the marketplace may lose confidence in, or may experience problems relating to, digital asset trading venues. Digital asset trading venues may impose daily, weekly, monthly or customer-

specific transaction or distribution limits or suspend withdrawals entirely, rendering the exchange of digital assets for fiat currency difficult or impossible.

Participation in digital asset trading venues requires users to take on credit risk by transferring digital assets from a personal account to a third-party's account. Digital asset exchanges generally purchase digital assets for their own account and allocate positions to customers through internal bookkeeping entries while maintaining exclusive control of the private keys related to such digital assets. Due to the lack of regulatory oversight and opaque nature of the digital asset marketplace, this practice creates a risk that a digital asset exchange may not hold sufficient digital assets and funds to satisfy its obligations and that such deficiency may not be easily identified or discovered.

Certain digital asset networks operate on a system where only holders of the relevant digital assets (who are required to "pledge" an amount of their digital assets to a "smart contract" governing the network) may validate new blocks on the blockchain; these digital asset networks are said to use a "proof of stake" model and new blocks on the blockchain are sometimes said to be "verified" or "validated," as opposed to "mined." Digital asset networks that use a proof of stake model typically reward validators with transaction fees (i.e., as opposed to a set reward of digital assets (e.g., a "block reward")). The process by which blocks are validated on proof of stake digital asset networks varies greatly, but typically new blocks are proposed by one holder of the digital assets (determined by an algorithm included in the smart contract governing the network) and agreed to by a consensus of other holders of the relevant digital asset. If validators demand higher transaction fees in exchange for validating new blocks in a digital asset blockchain, the demand for that digital asset and, accordingly, its value, may be adversely impacted.

Accounts do not currently expect to stake their digital assets, although PIMCO reserves the right to do so. Staking involves pledging digital assets to a validator node operator, which may be the digital asset custodian or a third-party. In doing so, the Account will receive a

portion of the transaction fees. Staking will be subject to additional risks, which will vary depending on the protocols that govern the networks. Digital asset networks that currently operate on a proof of work basis may transition to a proof of stake model. The Ethereum network, which previously operated on a proof of work model migrated to a proof of stake model in 2022 and is expected to make other changes to its network in the future. There are several unknowns as to how and when these changes will be fully implemented. There is currently no digital asset that has effectively implemented a proof-of-stake algorithm or sharding at the proposed scale of Ethereum 2.0. The transition process, as well as the adoption of the Ethereum 2.0 protocols, may lead to a decrease in the value and/or an increase in the volatility of Ether or the digital asset market more broadly.

Accounts may hold digital assets representing an indirect interest in securities, commodities, loans or other credit instruments, real estate or other non-digital assets ("Tokenized Assets"). Generally, the issuer of the Tokenized Assets will hold the underlying assets, or engage a third-party such as a trustee or custodian to hold those assets on behalf of the issuer and the holders of the Tokenized Assets. Investments in Tokenized Assets are generally subject to similar risks as other digital assets, including cybersecurity, smart contract and liquidity risks. Tokenized Assets are also subject to the risks associated with the assets underlying the Tokenized Assets (e.g., Tokenized Assets representing an indirect interest in real property will be subject to the risks associated with a direct investment in real property), and, as a general matter, will be subject to an Account's investment guidelines and objectives that are applicable to the assets underlying the Tokenized assets. Further, Tokenized Assets will be subject to risks associated with any investment in a third-party pool of assets, including the risk that the issuer of the Tokenized Assets does not actually own or control the assets purportedly represented by the Tokenized Assets such that the holder's claim to the underlying assets may not be enforceable. These risks will be greater where the issuer or a third-party associated with the issuer is required to

take additional actions to acquire, dispose of, maintain, service or otherwise take discretionary actions related to the underlying assets. Additionally, Tokenized Assets will be indirectly subject to custody, credit and other risks in respect of the Tokenized Asset issuer's service providers, who may be related to the issuer. An Account that holds Tokenized Assets may be required to open an account with such service providers to hold or access its Tokenized Assets (including to place trades related thereto) only through specialized electronic platforms associated therewith. There can be no guarantee that such platforms will perform as expected or be available at all times. In times of distress, it may be challenging to access any rights to remove the underlying asset from the token in order to hold it directly. Tokenized Assets, in particular when transacting through a specialized electronic platform, may have limited or no liquidity and an Account's ability to liquidate its Tokenized Asset position may be subject to limitations that adversely affects the execution price. An Account that invests in Tokenized Assets may not hold a direct interest in the asset or assets underlying those Tokenized Assets and may not be entitled to exercise any voting, consent or other rights associated with the underlying assets. In addition, there can be no guarantee that the value of any Tokenized Asset will accurately represent the value of the underlying assets and, in some cases, Tokenized Assets may trade at a significant discount to the value of the underlying assets. The performance of Tokenized Assets may also deviate from the underlying assets due to additional expenses borne by the issuer in respect of the Tokenized Assets or its ownership of the underlying assets. Finally, as with digital assets generally, the regulatory treatment of Tokenized Assets is unclear, both in the United States and in other non-U.S. jurisdictions, and is subject to change. Any investment in Tokenized Assets is subject to a variety of risks, which if realized would have a negative, and potentially material, impact on the Account and its investment performance.

The U.S. Congress, SEC, U.S. Commodity Futures Trading Commission ("CFTC"), certain state regulators and other U.S. and non-U.S. government or quasi-governmental agencies have asserted authority over digital assets.

Those entities and other U.S. and non-U.S. government or quasi-governmental agencies have recently and may, in the future, adopt laws, regulations, directives or other guidance that have a material effect on digital assets and digital asset makers and service providers. These governmental entities have also recently engaged in significant enforcement activity related to digital assets. The effect of any future U.S. federal or state or non-U.S. legal or regulatory changes or enforcement activity is impossible to predict, but such change could be substantial and adverse to the value of an Account's digital asset investments. Furthermore, the taxation of digital currencies is uncertain in many jurisdictions and continuously evolving in others.

Digital Asset Futures Risk. Accounts may invest in exchange-traded futures contracts referencing digital assets. Like all futures, digital asset futures are derivatives and are subject to the risks associated with derivatives contracts. The primary risks associated with digital asset futures contracts are imperfect correlation, liquidity, volatility, leverage, unanticipated market movement, futures commission merchants and clearinghouse risk, credit and counterparty risk. There can be no guarantee that there will be a correlation between price movements in the digital asset futures and the underlying asset. The market for digital asset futures is relatively new and is still developing. As a result, digital asset futures markets are thinly traded relative to other futures markets. Trading in the cash digital asset market is more difficult as compared to more traditional cash markets, and in particular short selling digital assets remains challenging and costly. As a result of these features of the digital asset cash market, market makers and arbitrageurs may not be as willing to participate in the digital asset futures market as they are in other futures markets. Each of these factors may increase the likelihood that the price of digital asset futures will be volatile and/or will deviate from the price of the underlying asset.

Digital asset futures may experience significant price volatility. For example, exchange specified collateral for Bitcoin futures is substantially higher than for most other futures contracts, and collateral requirements may be set

as a percentage of the value of the contract, which means that collateral requirements for long positions can increase if the price of the contract rises. In addition, futures commission merchants may require collateral beyond the exchange's minimum requirement. Futures commission merchants may also restrict trading activity in digital asset futures by imposing position limits, prohibiting selling short the future or prohibiting trades where the executing broker places a trade on behalf of another broker (so-called "give-up transactions"). Specifically, Bitcoin futures are subject to daily limits that may impede a market participant's ability to exit a position during a period of high volatility. Exchanges where digital assets are traded (which are the source of the price(s) used to determine the cash settlement amount for digital asset futures) have experienced technical and operational issues, making digital asset prices unavailable at times. The cash market in digital assets has been the target of fraud and manipulation, which could affect the pricing, volatility and liquidity of the futures contracts. In addition, if settlement prices for digital asset futures are unavailable (which may occur following a trading suspension imposed by the exchange due to large price movements or following a fork of the digital asset, or for other reasons) or PIMCO determines such settlement prices are unreliable, the fair value of an Account's digital asset futures may be determined by reference, in whole or in part, to the cash market in the underlying asset. These circumstances may be more likely to occur with respect to digital asset futures than with respect to futures on more traditional assets.

Disposition of Investments. An Account may dispose of its investments through whatever manner it deems to be advisable, including through asset sales, repackaging transactions, securitizations, strategic transactions and other mergers and acquisitions activity, and/or any combination thereof. Therefore, the disposition of Account investments will be subject to the risks associated with the particular exit strategy utilized. Certain disposition techniques and structures may expose an Account to liability for (among other things) potential securities laws violations, breaches of representations and warranties, risk retention obligations,

and repurchase or “putback” obligations with respect to securitizations or similar structures.

Distressed Company Risk. An Account that invests in securities of distressed companies, which generally trade below “par” or full value, may be subject to greater levels of credit, issuer and liquidity risk than a portfolio that does not invest in such securities. Securities of distressed companies include both debt and equity securities. Debt securities of distressed companies are considered predominantly speculative with respect to the issuers’ continuing ability to make principal and interest payments. Distressed securities and any securities received in an exchange for such securities may be subject to restrictions on sale. Issuers of distressed company securities may also be involved in restructurings or bankruptcy proceedings that may not be successful. An economic downturn or period of rising interest rates could adversely affect the market for these securities and reduce the Account’s ability to sell these securities (liquidity risk). If the issuer of a debt security is in default with respect to interest or principal payments, the Account may lose the value of its entire investment. Investments in distressed securities often involve increased control position risk and litigation risk. PIMCO may take actions in a stressed or distressed situation which results in disputes or litigation, which could impose costs on the Account and could result in actions which decrease the value of the securities in the Account.

Dividend-Oriented Stocks Risk. Accounts that may invest in dividend-oriented securities carry certain risks. Issuers that have paid regular dividends or distributions to shareholders may not continue to do so in the future. An issuer may reduce or eliminate future dividends or distributions at any time and for any reason. During certain market conditions, the securities of issuers that have paid regular dividends or distributions may not be widely available or may be highly concentrated in particular sectors of the market. The value of a security of an issuer that has paid dividends in the past may decrease if the issuer reduces or eliminates future payments to its shareholders. If the dividends or distributions received by an Account decrease, the

Account’s performance may be impacted. Equity securities with higher dividend yields may be sensitive to changes in interest rates, and as interest rates rise, the prices of such securities may fall, which may result in losses to an Account. Additionally, issuers that have paid regular dividends may decrease or eliminate dividend payments in the future, which may result in a decrease in the value of the security and/or an investor receiving less income. In addition, Accounts that invest in equities issued by companies that have paid regular dividends to shareholders may decrease or eliminate dividend payments in the future. A decrease in dividend payments by an issuer may result in a decrease in the value of the security held by an Account or an Account receiving less income. In addition, equity securities with higher dividend yields may be sensitive to changes in interest rates, and as interest rates rise, the prices of such securities may fall. An Account’s use of a dividend capture strategy (i.e., purchasing an equity security shortly before the issuer pays a dividend and selling it shortly thereafter) exposes an Account to higher portfolio turnover, increased trading costs, the potential for capital loss, particularly in the event of significant short-term price movements of stocks subject to dividend capture trading and may result in negative tax consequences.

Emerging Markets Risk. Foreign (non-U.S.) investment risk may be particularly high to the extent that an Account invests in securities and other investments that are economically tied to countries with developing economies (often referred to as emerging market securities). These securities or other investments may present market, credit, currency, liquidity, volatility, legal, political, technical, headline, reputational, and other risks different from and potentially greater than the risks of investing in securities and instruments economically tied to developed foreign countries. To the extent an Account invests in emerging market securities or other investments that are economically tied to a particular region, country or group of countries, the Account may be more sensitive to adverse political or social events affecting that region, country or group of countries. Economic, business, political, or social instability may

affect emerging market securities differently, and often more severely, than developed market securities. An Account that focuses its investments in multiple asset classes of emerging market securities may have a limited ability to mitigate losses in an environment that is adverse to emerging market securities in general.

Emerging market securities or other investments may also be more volatile, less liquid, more difficult to value and are often more vulnerable to market and economic events than are developed market securities. Rising interest rates, combined with widening credit spreads, could negatively impact the value of emerging market debt and increase funding costs for foreign issuers. In such a scenario, foreign issuers might not be able to service their debt obligations, the market for emerging market debt could suffer from reduced liquidity, and any investing Accounts could lose money. The economy of some emerging markets may be particularly exposed to or affected by a certain industry or sector, and therefore issuers and/or securities of such emerging markets may be more affected by the performance of such industries or sectors. The Public Company Accounting Oversight Board, which regulates auditors of U.S. public companies, is unable to inspect audit work papers in certain foreign countries. Investors in foreign countries often have limited rights and few practical remedies to pursue shareholder claims, including class actions or fraud claims, and the ability of the SEC, the U.S. Department of Justice, and other authorities to bring and enforce actions, or obtain information needed to pursue or enforce such judgments, against foreign issuers or foreign persons is limited. Emerging market countries typically have less established regulatory, disclosure, legal, accounting, recordkeeping and financial reporting systems than those in more developed markets, which may increase the potential for market manipulation or reduce the scope or quality of financial information available to investors. In addition, foreign companies with securities listed on U.S. exchanges may be delisted if they do not meet U.S. accounting standards and auditor oversight requirements, which may decrease the liquidity and value of the securities. In determining whether an instrument is economically tied to an emerging market

country, PIMCO will use such factors and criteria as it deems reasonable in its discretion, which may differ from the factors and criteria used by others. Adverse conditions in a certain region can adversely affect securities of other countries whose economies appear to be unrelated. To the extent that an Account invests a portion of its assets in a concentrated geographic area, the Account will generally have more exposure to regional economic risks associated with that geographic area.

The currencies of emerging market countries may experience significant declines against the U.S. dollar, and devaluation may occur subsequent to investments in these currencies by an Account. Many emerging market countries have experienced substantial, and in some periods extremely high rates of inflation for many years. Inflation and rapid fluctuations in inflation rates have had, and may continue to have, negative effects on the economies and securities markets of certain emerging market countries.

Emerging securities markets may have different clearance and settlement procedures, which may be unable to keep pace with the volume of securities transactions or otherwise make it difficult to engage in such transactions. Settlement problems may cause the Account to miss attractive investment opportunities, hold a portion of the assets in cash pending investment, or be delayed in disposing of a portfolio security. Such a delay could result in liability to a purchaser of the security. Custody services in many emerging market countries remain undeveloped. The Account will be investing in emerging market countries where the current law and market practice carry fewer safeguards than in more developed markets, including the protection of client securities against claims from general creditors in the event of the insolvency of an agent selected to hold securities on behalf of an Account, and the Account's custodian and PIMCO have assumed no liability for losses resulting from the Account acting in accordance with such practice.

Emerging markets may also be more susceptible to fraud, corruption, money laundering and economic

sanctions risk, which may result in negative commercial consequences in relation to the value, liquidity, and tradability of investments in or related to those regions. These investments are also more susceptible to the adverse impacts described in “Sanctions, Anti-Corruption, Anti-Money Laundering and Related Considerations.” Any of these outcomes could adversely affect an Account’s performance with respect to such investments, and thus an Account’s performance as a whole.

Environmental, Social, and Governance Risk. An Account that employs environmental, social, and/or governance (“ESG”) investment objectives, guidelines and/or restrictions (“ESG Account”), carries the risk that the Account’s performance may differ from non-ESG Accounts. For example, an ESG Account’s objectives, guidelines, and/or restrictions could affect the Account’s exposure to certain sectors or types of investments, which could negatively impact the Account’s performance. In determining the efficacy of an issuer’s ESG practices, PIMCO will use its own proprietary assessments of ESG factors and, when appropriate, references standards as set forth by recognized global organizations such as the United Nations. As described in Appendix D, ESG factors may also be considered in the investment research process in Accounts that do not employ ESG investment objectives, guidelines, and/or restrictions where they may be material to assessing the risk and return profile of an investment. ESG factors that may be taken into account include, but are not limited to, climate change risks, social inequality, shifting consumer preferences, regulatory risks, talent management or misconduct at an issuer. All these factors may not be taken into account in connection with a particular investment or portfolio. In addition, regional differences in social responsibility norms and practices may be taken into account by PIMCO. ESG investing is qualitative and subjective by nature, and there is no guarantee that the factors utilized by PIMCO, or any judgment exercised by PIMCO will reflect the opinions of any particular Client, and the factors utilized by PIMCO may differ from the factors that any particular Client considers relevant in evaluating an issuer’s ESG practices. In evaluating an issuer, PIMCO is dependent upon information and data

from the issuer or third-party reporting that may be incomplete, inaccurate or unavailable, which could cause PIMCO to incorrectly assess an issuer’s business practices with respect to ESG practices. In addition, an issuer’s ESG practices or PIMCO’s assessment of an issuer’s ESG practices may change over time, including in response to relevant legal and regulatory developments.

ESG Accounts may seek to exclude issuers determined by PIMCO to be fundamentally misaligned with sustainability principles. In addition, PIMCO will endeavor, where appropriate, to work collaboratively with management towards these sustainability objectives where PIMCO believes doing so may materially improve the risk or return profile of the investment. As a result of these engagement activities, an ESG Account may purchase securities that do not currently engage in ESG practices to PIMCO’s satisfaction, in an effort to improve an issuer’s ESG practices. Successful application of an ESG Account’s investing strategy and PIMCO’s engagement efforts will depend on PIMCO’s skill in properly identifying and analyzing ESG factors, and there can be no assurance that the strategy or techniques employed will be successful. Changes in political, regulatory, tax, and/or other conditions in the U.S. and abroad with respect to ESG factors, including climate-related activities, may cause fluctuations in markets and securities prices around the world, which could negatively impact the value of an Account’s investments.

Equity Securities Risk. Equity securities represent an ownership interest, or the right to acquire an ownership interest, in an issuer. Equity securities also include, among other things, common stocks, preferred securities, convertible stocks and warrants. The values of equity securities, such as common stocks and preferred securities may decline due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in inflation, interest or currency rates or adverse investor sentiment generally. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or increased production costs

and competitive conditions within an industry. Conversely, a change in financial condition or other event affecting a single issuer or industry may adversely impact securities markets as a whole. Equity securities generally have greater price volatility than most fixed income securities. These risks are generally magnified in the case of equity investments in distressed companies. In addition, preferred securities may be subject to greater credit risk or other risks, such as risks related to deferred and omitted distributions, limited voting rights, liquidity, interest rates, regulatory changes and special redemption rights.

Focused Investment Risk. To the extent that an Account focuses its investments in a particular industry, the Account's portfolio will be more susceptible to events or factors affecting companies in that industry. These may include, but are not limited to, governmental regulation, inflation, rising interest rates, cost increases in raw materials, fuel and other operating expenses, technological innovations that may render existing products and equipment obsolete, competition from new entrants, high research and development costs, increased costs associated with compliance with environmental or other regulation and other economic, market, political or other developments specific to that industry. Also, an Account may invest a substantial portion of its assets in companies in related sectors that may share common characteristics, are often subject to similar business risks and regulatory burdens and whose securities may react similarly to the types of events and factors described above, which will subject the Account to greater risk. An Account also will be subject to focused investment risk to the extent that it invests a substantial portion of its assets in a particular issuer, market, asset class, country or geographic region. Please see also "Foreign Investment Risk" and "Emerging Markets Risk."

Risk of Escheatment. In accordance with state "unclaimed property" laws, shares or interests of a PIMCO Fund, or assets held in an Account, may legally be considered abandoned and required to be transferred to the relevant state (also known as "escheatment") under various circumstances. These circumstances, which vary

by state, can include inactivity (e.g., no investor-initiated contact for a certain period), returned mail (e.g., when mail sent to an investor is returned by the post office as undeliverable), uncashed checks or a combination of these. An incorrect address may cause an investor's account statements and other mailings to be returned to a PIMCO Fund or an investor's financial intermediary. Since states' statutory requirements regarding inactivity differ, it is important for investors to regularly contact their financial intermediary or a PIMCO Fund's transfer agent. State escheatment laws, and the application of the process described above, may vary by state, by an investor's financial intermediary and/or depending on how investors hold their shares or interests in a PIMCO Fund. Neither PIMCO nor a PIMCO Fund will be liable to investors or their representatives for good faith compliance with escheatment laws.

Foreign Investment Risk. An Account that invests in non-U.S. securities may experience more rapid and extreme changes in value than an Account that invests exclusively in securities of U.S. companies or government entities. The securities markets of many foreign countries are relatively small, with a limited number of companies representing a small number of industries. Additionally, issuers of foreign securities are usually not subject to the same degree of regulation as U.S. issuers. Reporting, legal, accounting and auditing standards of foreign (non-U.S.) countries differ, in some cases significantly, from U.S. standards. Global economies and financial markets are becoming increasingly interconnected, and conditions and events in one country, region or financial market may adversely impact issuers in a different country, region or financial market. Foreign market trading hours, clearance and settlement procedures, and holiday schedules may limit an Account's ability to buy and sell securities. Certain foreign exchanges impose requirements on the transaction settlement process with respect to certain securities, such as requirements to pre-deliver securities (for a sale) or pre-fund cash (for a buy) to a broker's account. Such requirements may limit an account's ability to transact in such securities in a timely manner and will subject the account to the risk of loss that could result if the broker is unable or unwilling to

meet its obligations with respect to pre-delivered securities or pre-funded cash. Investments in foreign markets may also be adversely affected by governmental actions such as the imposition of capital controls, nationalization of companies or industries, expropriation of assets or the imposition of punitive taxes. The governments of certain countries may prohibit or impose substantial restrictions on foreign investing in their capital markets or in certain sectors or industries. In addition, a foreign government may limit or cause delay in the convertibility or repatriation of its currency which would adversely affect the U.S. dollar value and/or liquidity of investments denominated in that currency. Adverse conditions in a certain region can adversely affect securities of other countries whose economies appear to be unrelated. Further, an Account that authorizes PIMCO to transact in foreign markets may be subject to the regulatory regime of that jurisdiction, which may adversely impact the Account as described below under "Government and Regulatory Risk." To the extent that an Account invests a significant portion of its assets in a specific geographic region, or in securities denominated in a particular foreign currency, the Account will generally have more exposure to regional economic risks, including weather emergencies and natural disasters, associated with foreign investments. Foreign securities may become less liquid in response to market developments or adverse investor perceptions, or become illiquid after purchase by an Account, particularly during periods of market turmoil, and may render holdings in that foreign country illiquid or even worthless. A reduction in trading in securities of issuers located in countries whose economies are heavily dependent upon trading with key partners may have an adverse impact on an Account's investments. Additionally, events and evolving conditions in certain markets or regions may alter the risk profile of investments tied to those markets or regions. This may cause investments tied to such markets or regions to become riskier or more volatile, even when investments in such markets or regions were perceived as comparatively stable historically. Moreover, changes in Russian laws and regulations could require the transfer of

securities from the NSD to registrars or other parties outside of standard custodial arrangements.

Futures/Cleared Swap Risk for Separate Accounts. The CFTC has established guidance that may adversely affect the treatment, and/or increase the risk exposure, of Separate Accounts under customer agreements with a futures commission merchant ("FCM") (including in respect of futures and cleared derivatives transactions). Pursuant to this guidance, such agreements between an FCM and a Separate Account customer may not preclude the FCM from calling the underlying beneficial owner of the Separate Account for margin or otherwise guarantee the beneficial owner against or limit the beneficial owner's loss. For Separate Accounts, this means that an FCM must retain the ability to ultimately call for additional funds from the beneficial owner and to look to funds in other accounts of the same beneficial owner held by that FCM, including assets in other accounts of the same beneficial owner managed by PIMCO as well as assets of that beneficial owner managed by other investment managers. For purposes of CFTC regulations governing disbursement of margin from clearing member customer accounts, the CFTC has adopted a new rule that allows an FCM to treat the separate accounts of a beneficial owner cleared by such FCM (e.g., accounts managed by different investment managers or different accounts managed by the same manager) as separate in the ordinary course of business, provided certain conditions are met (e.g., the beneficial owner and its separate accounts are solvent and margin calls are met within the timeframes prescribed by the rule, and an event of default has not occurred). However, if the foregoing conditions are not met, there is a risk that Separate Account assets and/or PIMCO's margining practices could be impacted. For instance, if another investment manager does not meet a margin call from an FCM in respect of a beneficial owner for which PIMCO manages a Separate Account, the FCM may withhold the return of margin for the Separate Account based on the CFTC's new rule that exposure should be viewed at the beneficial owner (rather than separate account) level. These and other regulatory developments may impair the effectiveness, increase exposure risks or raise the

costs of a Separate Account's futures and/or cleared derivatives transactions, impede the effective implementation of the Separate Account's futures and/or cleared derivatives strategies, or adversely affect the Separate Account's performance. Please see "Derivatives Risk" above and "Government and Regulatory Risk" below.

General Economic and Market Risk. The value of an Account's investments could be affected by factors affecting the economy and securities markets generally, such as real or perceived adverse economic conditions, supply and demand for particular instruments, changes in the general outlook for certain markets or corporate earnings, interest rates, announcements of political information, bank failures, natural disasters, outbreaks of disease or adverse investor sentiment generally. The market values of an Account's investments may decline for a number of reasons, including increases in defaults resulting from changes in overall economic conditions and widening of credit spreads. Unfavorable market conditions may also increase funding costs, limit access to the capital markets or result in credit terms changing or credit becoming unavailable. These events could have an adverse effect on an Account's investments and the Account's overall performance.

An Account is subject to the risk that natural disasters and geopolitical and other events (e.g., wars, terrorism and outbreaks of disease) will disrupt securities markets and adversely affect global economies and markets, thereby decreasing the value of the Account's investments. Events such as war, military conflicts, terrorism and related geopolitical risks have led, and may in the future lead, to increased short-term market volatility and may have adverse long-term effects on U.S. and world economies and markets generally. Those events could also have an acute effect on individual issuers or related groups of issuers. These risks could also adversely affect individual issuers or related group of issuers, securities markets, interest rates, auctions, secondary trading, ratings, credit risk, inflation, deflation and other factors relating to an Account's investments. At such times, an Account's exposure to the risks described

elsewhere in this section, including market risk, liquidity risk, risk of non-U.S. investments, currency risk and credit and counterparty risk, will likely increase.

Events such as health pandemics or outbreaks of disease, such as the COVID-19 pandemic, may lead to increased short-term market volatility and may have adverse long-term effects on the U.S. and world economies and markets generally. Health pandemics or outbreaks could result in a general economic decline in a given region, or globally, particularly if the outbreak persists for an extended period of time or spreads globally. This could have an adverse impact on an Account's investments, or an Account's ability to source new investments or to realize its investments. Pandemics and similar events could also have an acute effect on individual issuers or related groups of issuers and could adversely affect securities markets, interest rates, auctions, secondary trading, ratings, credit risk, inflation, deflation and other factors relating to an Account's investments or PIMCO's operations. Additionally, the risks related to health pandemics or outbreaks of disease are heightened due to uncertainty as to whether such an event would qualify as a force majeure event. If a force majeure event is determined to have occurred, a counterparty to an Account or a portfolio investment may be relieved of its obligations under certain contracts to which it is a party, or, if it has not, the Account and its investments may be required to meet their contractual obligations, despite potential constraints on their operations and/or financial stability. Either outcome could adversely impact investments and the Account's performance.

Market disruptions can prevent an Account from implementing its investment program for a period of time and achieving its investment objective. For example, a disruption may cause an Account's derivatives counterparties to discontinue offering derivatives on some underlying commodities, securities, reference rates, or indices or to offer such products on a more limited basis.

Market uncertainty may have a significant impact on the business of an Account. Among other things, the level of investment opportunities may decline from PIMCO's

current expectations. One possible consequence is that an Account may take a longer than anticipated period to invest capital and/or the Account may be relatively concentrated in a limited number of investments. Consequently, during this period, the returns (if any) realized by Investors may be substantially adversely affected by the unfavorable performance of a small number of these investments. Although PIMCO believes that recent market dislocations will result in attractive investment opportunities, an Account may not be able to time the acquisition or disposition of its investments correctly, which could result in further depreciation in values.

Changes in U.S. social, political, regulatory, and economic conditions or in laws and policies governing foreign trade, manufacturing, development and investment in the jurisdictions in which an Account may invest, and any negative sentiments towards the U.S. as a result of such changes, could adversely affect the performance of an Account's investments. In particular, the outcome of U.S. presidential and other elections creates uncertainty with respect to the legal and regulatory regimes in which an Account and its investments operate, which could have a material adverse impact on an Account and its investments. In addition, negative sentiments towards the U.S. among non-U.S. customers and among non-U.S. employees or prospective employees could adversely affect sales or hiring and retention, respectively, in investments.

Government and Regulatory Risk. Legal, tax and regulatory changes (both within and outside the U.S.) could occur and may adversely affect Accounts and their ability to pursue their investment strategies and/or increase the costs of implementing such strategies. New (or revised) laws or regulations may be imposed by the CFTC, the SEC, the Internal Revenue Service, the Department of Labor, the U.S. Federal Reserve or other banking regulators, the Financial Crimes Enforcement Network ("FinCEN"), the Office of Foreign Assets Control ("OFAC"), or other governmental regulatory authorities or self-regulatory organizations that supervise the financial markets (including non-U.S. regulatory authorities, to the

extent applicable), of which the potential impact on the value of securities and other assets held by an Account is unknown. These agencies have been empowered to promulgate a variety of rules pursuant to financial reform legislation in the U.S. The current regulatory posture of governments and regulators may have the effect of reducing market liquidity, market resiliency and money supply, such as through higher rates, tighter financial regulations and proposals that may prevent certain investors or investment vehicles from participating in certain markets. An Account may also be adversely affected by changes in the enforcement or interpretation of existing statutes and rules by courts and/or these governmental regulatory authorities or self-regulatory organizations. Moreover, legal and regulatory changes may adversely affect an Account's ability to obtain financing by (among other things) reducing the availability of financing and/or adversely impacting financing costs and other terms.

The financial services industry is subject to extensive regulation. Banking regulators have broad and largely discretionary powers, which include prohibiting "unsafe or unsound" practices; requiring affirmative actions to correct any violation or practice; issuing administrative orders that can be judicially enforced; directing increases in capital; directing the sale of subsidiaries or other assets; limiting dividends and distributions; restricting growth; assessing civil monetary penalties; removing officers and directors; and terminating deposit insurance. These actions and other regulatory requirements could have a material adverse effect on an investment in an Account. The financial institutions in which an Account will invest and with which an Account will transact are subject to laws, regulations, administrative actions and policies in each location in which they operate.

There can be no assurance that an Account, PIMCO or any of their affiliates will avoid regulatory examinations or enforcement actions in the future. Even if an investigation or proceeding did not result in a sanction or the sanction imposed against an Account, PIMCO or their respective affiliates was small in monetary amount, the adverse publicity relating to the investigation,

proceeding or imposition of any such sanction could harm an Account, PIMCO or their respective affiliates' reputations which may adversely affect an Account's investment performance by hindering its ability to obtain favorable financing or consummate a potentially profitable investment.

The regulatory environment is evolving, and changes in the regulation or taxation of private investment funds may adversely affect the value of the investments held by an Account and the ability of an Account to execute its investment strategy. In addition, the securities and derivatives (including futures) markets are subject to comprehensive statutes, regulations and margin requirements. The CFTC, the SEC, the FDIC, other U.S. and non-U.S. regulators, and self-regulatory organizations and exchanges are authorized to take extraordinary actions in the event of market emergencies. The regulation of derivatives transactions, funds and Accounts that engage in such transactions and the sponsors of such funds is an evolving area of law and is subject to modification by government, self-regulatory organization and judicial action. For example, the U.S. government has enacted legislation that provides for the regulation of the derivatives market, including clearing, margin, reporting and registration requirements. The CFTC, the SEC, and other U.S. regulators have put in place and continue to develop rules and regulations enacting the provisions of the Dodd-Frank Act. The E.U., the U.K., and numerous other jurisdictions have implemented (and are in the process of implementing) similar requirements that will affect an Account when it enters into derivatives transactions with a counterparty organized in that jurisdiction or otherwise subject to that jurisdiction's derivatives regulation. The effect of any future regulatory change on an Account could be substantial and adverse.

The SEC has finalized new rules requiring the central clearing of certain cash and repurchase transactions involving U.S. Treasuries. Historically, such transactions have not been required to be cleared and voluntary clearing of such transactions has generally been limited. Cleared cash and repurchase transactions involving U.S.

Treasuries are subject to many of the same risks as derivatives that are cleared by a central clearing organization (see "Derivatives Risks" above). Given the limited number of clearing agencies offering central clearing of these transactions, central clearing is expected to result in a concentration of risk in relatively few clearing agencies. Failure or financial distress of a clearing agency could have a significant effect on the financial markets. Additionally, it is expected that market participants may face higher costs as a result of central clearing due to margin requirements and fees. The transition to central clearing could potentially reduce liquidity in the market, including by limiting the number of counterparties with whom an Account or other market participant may execute repurchase agreements or reverse repurchase agreements in respect of U.S. Treasuries, or because such Account or other market participant cannot access the clearing platform due to regulatory, operational or other constraints. The market for such transactions may also be impacted to the extent liquidity is split among different clearinghouses. Market participants may experience significant operational challenges and incur increased operational and legal costs in connection with implementation of this new clearing mandate. Once implemented these rules could make it more difficult for an Account to execute certain investment strategies and may have an adverse effect on an Account's ability to generate returns.

FinCEN has finalized a new rule requiring certain investment advisors to adopt anti-money laundering programs and has proposed a new rule requiring investment advisors to adopt customer identification programs. FinCEN has delegated or intends to delegate examination of compliance with these rules to the SEC, and there can be no assurance that an Account, PIMCO or any of their affiliates will avoid regulatory examination and possibly enforcement actions relating to compliance with these rules in the future.

While it is currently difficult to predict the full impact of these or any other new rules, such rules could make it more difficult for an Account to execute certain

investment strategies and may have a material adverse effect on an Account's ability to generate returns.

Hedging Risk. PIMCO engages in hedging transactions. To the extent PIMCO employs a hedging strategy, the success of any such hedging strategy will depend, in part, upon PIMCO's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments being hedged. Since the characteristics of many securities change as markets change or time passes, the success of such hedging strategy will also be subject to PIMCO's ability to continually recalculate, readjust and execute hedges in an efficient and timely manner. While PIMCO may enter into hedging transactions to seek to reduce risk, such transactions may result in a poorer overall performance than if PIMCO had not engaged in such hedging transactions. Additionally, PIMCO may not hedge against a particular risk because it does not regard the probability of the risk occurring to be sufficiently high as to justify the cost of the hedge, or because it does not foresee the occurrence of the risk. Moreover, there is no guarantee that such intended hedging strategy will be successful in hedging out the subject risks.

High Yield Risk. Accounts that invest in high yield securities and unrated securities of similar credit quality (commonly known as "high yield securities" or "junk bonds") may be subject to greater levels of credit risk, call risk and liquidity risk than Accounts that do not invest in such securities. These securities are considered predominantly speculative with respect to an issuer's continuing ability to make principal and interest payments and may be more volatile than other types of securities. An economic downturn or individual corporate developments could adversely affect the market for these securities and reduce an Account's ability to sell these securities at an advantageous time or price. An economic downturn would generally lead to a higher non-payment rate and a high yield security may lose significant market value before a default occurs. The Account may purchase distressed securities that are in default or the issuers of which are in bankruptcy, which involve heightened risks.

High yield securities structured as zero-coupon bonds or pay-in-kind securities tend to be especially volatile as they are particularly sensitive to downward pricing pressures from rising interest rates or widening spreads and may require an Account to make taxable distributions of imputed income without receiving the actual cash currency. Issuers of high yield securities may have the right to "call" or redeem the issue prior to maturity, which may result in an Account having to reinvest the proceeds in other high yield securities or similar instruments that may pay lower interest rates. An Account may also be subject to greater levels of liquidity risk than funds that do not invest in high yield securities. In addition, the high yield securities in which an Account invests may not be listed on any exchange and a secondary market for such securities may be comparatively illiquid relative to markets for other more liquid fixed income securities. Consequently, transactions in high yield securities may involve greater costs than transactions in more actively traded securities. A lack of publicly available information, irregular trading activity and wide bid/ask spreads among other factors, may, in certain circumstances, make high yield debt more difficult to sell at an advantageous time or price than other types of securities or instruments. These factors may result in an Account being unable to realize full value for these securities and/or may result in an Account not receiving the proceeds from a sale of a high yield security for an extended period after such sale, each of which could result in losses to an Account. In addition, adverse publicity and investor perceptions, whether or not based on fundamental analysis, may decrease the values and liquidity of high yield securities, especially in thinly traded markets. When secondary markets for high yield securities are less liquid than the market for other types of securities, it may be more difficult to value the securities because such valuation may require more research, and elements of judgment may play a greater role in the valuation because there is less reliable, objective data available. Please also see "Senior Loan Risk" for a description of certain other risks associated with high yield securities.

Inflation-Indexed Security Risk. Inflation-indexed debt securities are subject to the actual or anticipated effects of changes in market interest rates caused by factors other than inflation (real interest rates). In general, the value of an inflation-indexed security, including Treasury inflation-protected securities ("TIPS"), tends to decrease when real interest rates increase and can increase when real interest rates decrease. Thus generally, during periods of rising inflation, the value of inflation-indexed securities will tend to increase and during periods of deflation, their value will tend to decrease. Interest payments on inflation-indexed securities are unpredictable and will fluctuate as the principal and interest are adjusted for inflation. There can be no assurance that the inflation index used (i.e., the Consumer Price Index) will accurately measure the real rate of inflation in the prices of goods and services. Because municipal and corporate inflation-indexed securities are a small component of their respective bond markets, they may be subject to liquidity risk.

Inflation and Deflation Risk. An Account may be subject to inflation and deflation risk. Inflation risk is the risk that the value of assets or income from an Account's investments will be worth less in the future as inflation decreases the value of payments at future dates. Inflation poses a "stealth" threat to investors because it reduces savings and investment returns. Central banks, such as the U.S. Federal Reserve, generally attempt to control inflation by regulating the pace of economic activity. They typically attempt to affect economic activity by raising and lowering short-term interest rates. At times, governments may attempt to manage inflation through fiscal policy, such as by raising taxes or reducing spending, thereby reducing economic activity; conversely, governments can attempt to combat deflation with tax cuts and increased spending designed to stimulate economic activity. Inflation rates may change frequently and significantly as a result of various factors, including unexpected shifts in the domestic or global economy and changes in economic policies, and an Account's investments may not keep pace with inflation, which may result in losses to investors. As inflation increases, the real value of an Account's portfolio could

decline and the interest payments on Account borrowings, if any, may increase. Deflation risk is the risk that prices throughout the economy decline over time. Deflation may have an adverse effect on the creditworthiness of issuers and may make issuer default more likely or materially impair the ability of distressed issuers to restructure, which may result in a decline in the value of an Account's portfolio. Though an Account may enter into instruments related to inflation or deflation (such as inflation-indexed bonds), it will be under no obligation to do so. Inflation rates may change frequently and significantly as a result of various factors, including unexpected shifts in the domestic or global economy or changes in fiscal or monetary policy.

Interest Rate Risk. Interest rate risk is the risk that fixed income securities and other instruments in an Account will fluctuate in value because of changes in interest rates. A wide variety of factors can cause interest rates (or yields of U.S. Treasury securities or yields of other types of bonds) to change, including but not limited to, central bank monetary policies, changing inflation or real growth rates, and general economic conditions. For example, as nominal interest rates rise, the value of certain fixed income securities or dividend-paying equity securities held by an Account is likely to decrease. A nominal interest rate can be described as the sum of a real interest rate and an expected inflation rate. Interest rate changes can be sudden and unpredictable, and an Account may lose money as a result of movements in interest rates. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. The values of equity and other non-fixed income securities may also decline due to fluctuations in interest rates. Inflation-indexed bonds, including TIPS, decline in value when real interest rates rise. In certain interest rate environments, such as when real interest rates are rising faster than nominal interest rates, inflation-indexed bonds may experience greater losses than other fixed income securities with similar durations. Variable and floating rate securities generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as

quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. Inverse floating rate securities may decrease in value if interest rates increase. Inverse floating rate securities may also exhibit greater price volatility than a fixed rate obligation with similar credit quality. When an Account holds variable or floating rate securities, a decrease (or, in the case of inverse floating rate securities, an increase) in market interest rates will adversely affect the income received from such securities and the value of the Account.

Dividend-paying equity securities, particularly those whose market price is closely related to their yield, may be more sensitive to changes in interest rates. During periods of rising interest rates, the values of such securities may decline, which may result in losses to an Account. A portfolio's average duration may not accurately reflect the interest rate risk of the portfolio, especially if the portfolio consists of securities with widely varying durations. PIMCO may not be able to hedge against changes in interest rates or may choose not to do so for cost or other reasons. Additionally, any hedges may not work as intended. Rising interest rates could also affect the value of an Account's investment in a PIMCO Fund.

Convexity is an additional measure used to understand a security's or Account's interest rate sensitivity. Convexity measures the rate of change of duration in response to changes in interest rates. With respect to a security's price, a larger convexity (positive or negative) may imply more dramatic price changes in response to changing interest rates. Convexity may be positive or negative. Negative convexity implies that interest rate increases result in increased duration, and that interest rate decreases result in declining duration (i.e. increased sensitivity in prices in response to rising and/or declining interest rates). Thus, securities with negative convexity, which may include bonds with traditional call features and certain mortgage-backed securities, may experience greater losses in periods of rising interest rates. Accordingly, Accounts holding such securities may be

subject to a greater risk of losses in periods of rising interest rates.

Risks Associated with the London Interbank Offered Rate Transition and Reference Benchmarks.

The London Interbank Offered Rate ("LIBOR") was the offered rate for short-term Eurodollar deposits between major international banks. The terms of investments, financings or other transactions (including certain derivatives transactions) to which an Account may be a party have historically been tied to LIBOR. In connection with the global transition away from LIBOR led by regulators and market participants, as a result of benchmark reforms, LIBOR was last published on a representative basis at the end of June 2023. Alternative reference rates to LIBOR have been established in most major currencies and markets in these new rates are continuing to develop (e.g., the Secured Overnight Financing Rate (SOFR) for USD-LIBOR). While the transition from LIBOR has been substantially completed, there remains residual risks associated with the transition that may impact markets or particular investments and, as such, the full impact of the transition on an Account or the financial instruments in which an Account invests cannot yet be fully determined.

In addition, interest rates or other types of rates and indices which are classed as "benchmarks" have been the subject of ongoing national and international regulatory reform, including under the European Union regulation on indices used as benchmarks in financial instruments and financial contracts (known as the "Benchmarks Regulation"). The Benchmarks Regulation has been enacted into UK law by virtue of the European Union (Withdrawal) Act 2018 (as amended), subject to amendments made by the Benchmarks (Amendment and Transitional Provision) (EU Exit) Regulations 2019 (SI 2019/657) and other statutory instruments. Following the implementation of these reforms, the manner of administration of benchmarks has changed and may further change in the future, with the result that relevant benchmarks may perform differently than in the past, the use of benchmarks that are not compliant with the new standards by certain supervised entities may be restricted, and certain benchmarks may be eliminated

entirely. Such changes could cause increased market volatility and disruptions in liquidity for instruments that rely on or are impacted by such benchmarks.

Additionally, there could be other consequences which cannot be predicted.

Certain financial institutions have in the past been accused by various regulators of manipulating certain reference rates (e.g., LIBOR), and have been alleged to have altered costs when reporting them to regulators. There can be no assurance that the rate-setting process for reference rates will not be affected by similar conduct in the future, or that any investigations into the rate-setting process and any related litigation will not result in disruptive changes in the process used to determine reference rates or will not affect the use of reference rates going forward.

Investments in Latin American Countries. As an international emerging market, Latin America has historically suffered from social, political, and economic instability. Certain Latin American countries have experienced, and may continue to experience, high rates of inflation, high interest rates, exchange rate fluctuations, large amounts of external debt, balance of payments and trade difficulties and extreme poverty and unemployment. Investing in the region is subject to additional risk caused by periods of regional conflict, political corruption, money laundering, economic sanctions, totalitarianism, protectionist measures, nationalization, hyperinflation, debt crises, sudden and large currency devaluation, and intervention by the military in civilian and economic spheres. Additionally, a number of Latin American countries are among the largest debtors of developing countries and have a long history of foreign debt and default. The majority of Latin American economies have become highly dependent upon foreign credit and loans from external sources to fuel their state-sponsored economic plans. As a result of their dependence on foreign credit and loans, a number of Latin American economies face significant economic difficulties due to tightened international credit supplies. Recovery from economic downturns in Latin America has

historically been slow, and any such recovery, if sustained, may be gradual.

Investments in the People's Republic of China. Certain Accounts may invest in securities and instruments that are economically tied to the People's Republic of China (excluding Hong Kong, Macau and Taiwan for the purpose of this disclosure, unless otherwise specified herein) ("PRC"). Such investment may be made through various available market access programs. In addition to risks associated with investing in non-U.S. securities and in emerging markets, investing in the PRC presents other risks, including (without limitation): (a) inefficiencies resulting from erratic growth; (b) the unavailability of consistently-reliable economic or financial data; (c) potentially high rates of inflation; (d) dependence on exports and international trade including the risk of increased trade tariffs and embargoes; (e) relatively high levels of asset price volatility, suspension risk and difficulties in settlement of securities; (f) potential shortage of liquidity and limited accessibility by foreign investors; (g) greater competition from regional economies and territorial and other disputes with other countries; (h) fluctuations in currency exchange rates or currency devaluation by the PRC government or central bank, particularly in light of the relative lack of currency hedging instruments and controls on the ability to exchange local currency for U.S. dollars; (i) the relatively small size and absence of operating history of many PRC companies; (j) the developing nature of the legal and regulatory framework for securities markets, custody arrangements and commerce; (k) uncertainty and potential changes with respect to the rules and regulations of the FII program and other market access programs through which such investments are made; (l) the commitment of the PRC government to continue with its economic reforms; (m) increasing restrictions on private property ownership; (n) Chinese regulators may suspend trading in Chinese issuers (or permit such issuers to suspend trading) during market disruptions, and that such suspensions may be widespread and increase the risk of market manipulation; (o) risks associated with greater governmental control and investment in the economy; (p) risks associated with

potential conflicts with Taiwan; (q) different regulatory and audit requirements related to the quality of financial statements of Chinese issuers; (r) limitations on the ability to inspect the quality of audits performed in China, particularly the Public Company Accounting Oversight Board's ("PCAOB") lack of access to inspect PCAOB-registered accounting firms in China which could result in the failure to disclose certain material information; (s) limitations on the ability of U.S. authorities to enforce actions against non-U.S. companies and non-U.S. persons; (t) limitations on the rights and remedies of investors as a matter of law, and financial intermediaries/infrastructures that are located in the PRC or otherwise subject to PRC laws and/or regulations.

In addition, there are controls on foreign investment in the PRC and limitations on repatriation of invested capital. For example, there are certain regulatory restrictions on, among others, investment scope, repatriation of funds, foreign shareholding limit and account structure.

As a result of PRC regulatory requirements, an Account may be limited in its ability to invest in securities or instruments tied to the PRC and/or may be required to liquidate its holdings in securities or instruments tied to the PRC. Under certain instances, involuntary liquidations may result in losses for an Account. In addition, securities exchanges in the PRC typically have the right to suspend or limit trading in traded securities. The PRC government or relevant PRC regulators may also implement policies that may adversely affect the PRC financial markets. Such suspensions, limitations or policies may have a negative impact on the performance of an Account's investments.

Certain Accounts may obtain exposure to companies based or operated in the PRC by investing through legal structures known as variable interest entities ("VIEs"). In such cases, the Chinese operating company establishes an offshore company, and the offshore company enters into contractual arrangements with the operating company. These contractual arrangements are intended to give the offshore company the ability to exercise power over and obtain economic rights from the operating company. Shares of the offshore company, in

turn, are listed and traded on exchanges outside of the PRC and are available to non-Chinese investors such as an Account. There is a risk that the PRC might prohibit the use of VIEs or eliminate their ability to transmit economic or governance rights to non-Chinese investors at any time. The future stance of the PRC on VIEs and the potential impact of any new regulations remain uncertain. Investments involving a VIE may also pose additional risks because such investments are made through a company whose interests in the underlying operating company are established through contract rather than through equity ownership. For example, in the event of a dispute, the offshore company's contractual claims with respect to the operating company may be deemed unenforceable in the PRC, thus limiting (or eliminating) the remedies and rights available to the offshore company and its investors. Such legal uncertainty may also be exploited against the interests of the offshore company and its investors. Further, the interests of the equity owners of the operating company may conflict with the interests of the investors of the offshore company, and the fiduciary duties of the officers and directors of the operating company may differ from, or conflict with, the fiduciary duties of the officers and directors of the offshore company. Foreign companies listed on U.S. exchanges, including offshore companies that utilize a VIE structure, also could face delisting or other ramifications for failure to meet the requirements of the SEC, the PCAOB or other United States regulators. Any of the foregoing risks and events could negatively impact an Account's performance.

PRC's currency (i.e. Renminbi/RMB) is not entirely determined by the market but is instead managed relative to the U.S. dollar. This can lead to sudden and large adjustments in the currency, which, in turn, can have a disruptive and negative effect on foreign investors. The government of the PRC also may restrict the free conversion of its currency into foreign currencies, including the U.S. dollar. Currency repatriation restrictions may have the effect of making securities and instruments tied to the PRC relatively illiquid, particularly in connection with withdrawal requests. In addition, the government of the PRC exercises significant control over

economic growth through direct and heavy involvement in resource allocation and monetary policy, control over payment of foreign currency denominated obligations and provision of preferential treatment to particular industries and/or companies. Economic reform programs in the PRC have contributed to growth, but there is no guarantee that such reforms will continue. The Chinese government has from time to time taken actions that influence the prices at which certain goods may be sold, encourage companies to invest or concentrate in particular industries, induce mergers between companies in certain industries and induce private companies to publicly offer their securities to increase or continue the rate of economic growth, control the rate of inflation or otherwise regulate economic expansion. It may do so in the future as well, which could potentially have a significant adverse effect on economic conditions in China.

The PRC has historically been prone to natural disasters such as droughts, floods, earthquakes and tsunamis, and the region's economy may be affected by such environmental events in the future. An Account's investment in the PRC is, therefore, subject to the risk of such events. In addition, the political reunification of China and Taiwan, over which China continues to claim sovereignty, is a sensitive issue that has included threats of invasion by China (including by force). Any resulting political or economic disturbances, as well as any retaliatory countermeasures, may have an adverse impact on the values or liquidity of an Account's investments.

The application of tax laws (e.g., the imposition of withholding taxes on dividend or interest payments) or confiscatory taxation may also affect an Account's investment in the PRC. Changes in market practice or understanding of the applicable tax rules may result in the amounts reserved being too great or too small relative to actual tax burdens.

In recent years, various governmental bodies have considered and, in some cases, imposed sanctions, trade and investment restrictions, and/or notification requirements targeting the PRC (inclusive of Hong Kong and Macau), and it is possible that additional restrictions

may be imposed or retaliatory action may be taken in the future. For example, in January 2025, a new "outbound investment" regulatory regime took effect in the U.S., which prohibits or requires notification with respect to certain transactions involving PRC (inclusive of Hong Kong and Macau) based or owned companies that operate in specified sensitive technology sectors, including advanced semiconductors and microelectronics, quantum information, and certain areas and uses of artificial intelligence technologies. The U.S. government has stated that it is considering expansion of this regime, including to cover additional sectors, such as biotechnology, hypersonics, aerospace, advanced manufacturing, and directed energy. Given the complex and evolving relationship between the PRC and certain other countries, it is difficult to predict the impact of such restrictions on market conditions or an Account's investments. Further, complying with such restrictions may prevent PIMCO or an Account from pursuing certain investments, cause delays or other impediments with respect to consummating such investments, require notification of such investments to government authorities, require divestment or freezing of investments on unfavorable terms, render divestment of underperforming investments impracticable, negatively impact the Account's ability to achieve its investment objective, prevent the Account from receiving payments otherwise due it, negatively impact the value of an Account's investments, restrict participation in certain investments by certain investors, require PIMCO or the Account to obtain information about underlying investors, increase diligence and other similar costs to the Account, render valuation of China-related investments challenging, or require the Account to consummate an investment on terms that are less advantageous than would be the case absent such restrictions. Any of these outcomes could adversely affect the Account's performance with respect to such investments, and thus the Account's performance as a whole. New and contemplated sanctions, trade, and other investment restrictions and obligations could also adversely impact the Account in various and unpredictable ways. Disruptions caused by such

sanctions and other restrictions may also impact the PRC's economy, as well as the PRC and other issuers of securities in which the Account is invested and may result in the PRC imposing countermeasures which may also adversely impact the Account and its investments.

External relations, such as the China-U.S. relationship regarding trade, currency exchange, and intellectual property protection, among other things, could also have implications with respect to capital flow and business operations. U.S. social, political, regulatory and economic conditions prompting changes in laws and policies governing foreign trade, manufacturing, developments and investments in the PRC could adversely affect the performance of an Account's investments. For example, in recent years, the U.S. federal government implemented an aggressive trade policy with respect to the PRC, including imposing tariffs on certain imports of the PRC, criticizing the PRC government for its trade policies, taking actions against individual PRC companies, imposing sanctions on certain officials of the Hong Kong government and the PRC central government and issuing executive orders that prohibit certain transactions with certain China-based persons, companies and their respective subsidiaries. Recent events have added to uncertainty in such relations, including restrictions imposed by the U.S. government limiting the ability of U.S. persons to invest in certain Chinese companies and the ability of Chinese companies to engage in activities or transactions inside the U.S. Various U.S. statutes and executive orders have designated the PRC as a "foreign adversary," and the U.S. government has announced that it intends to take further actions to deter U.S. investments relating to the PRC's Military-Civil Fusion strategy. The UK also suspended its extradition treaty with Hong Kong and extended its arms embargo on China to Hong Kong. It is possible that additional sanctions, export controls and/or investment restrictions will be announced. The PRC government has implemented, and may further implement, measures in response to new trade policies, treaties, sanctions and tariffs initiated by the U.S. and other governments.

In addition, the PRC government has implemented, and may further implement, measures including retaliatory measures, in response to new trade policies, treaties and tariffs initiated by the U.S. or other governments, which could negatively impact the value or liquidity of an Account's investments. It is possible that additional sanctions, export controls and/or investment restrictions will be announced. Escalation of China-U.S. tensions resulting from these events and the retaliatory countermeasures that the national and state governments have taken and may take (including U.S. sanctions and anti-sanction laws in China), as well as other economic, social or political unrest in the future, could have a material adverse effect on or could limit the activities of PIMCO, an Account or its investments. Such countermeasures may, among other things, cause Account assets or investments to lose value, or limit an Account's ability to invest in PRC or PRC-related securities or other investments, or to repatriate existing assets located in China at the time the countermeasures are applied.

Investment-Related Information. PIMCO receives and generates various kinds of investment-related data and other information from Clients or other sources, including information related to trends and budgets, and financial, industry, market, business operations, customers, suppliers, competitors and other metrics. PIMCO expects to use this information in a manner that may provide a material benefit to PIMCO, its affiliates, or to certain clients without compensating or otherwise benefitting the client from which such information was obtained, including an Account. This information may, in certain instances, include material non-public information which may have been received or generated in connection with actual or prospective investments of PIMCO's clients. For more information on material non-public information, please see "Material Non-Public Information/Insider Trading" in Item 11.

Issuer Risk. The value of a security may decline for a number of reasons that directly relate to the issuer, such as management performance, major litigation, investigations or other controversies, changes in the

issuer's financial condition or credit rating, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives financial leverage, reputation or reduced demand for the issuer's goods or services, as well as the historical and prospective earnings of the issuer and the value of its assets. A change in the financial condition of a single issuer may affect one or more other issuers or securities markets as a whole.

Leveraging Risk. Accounts may generate investment leverage by borrowing money. In addition, certain investment transactions including, but not limited to, reverse repurchase agreements, loans of portfolio securities, and the use of when-issued, delayed delivery or forward commitment transactions, may give rise to a form of leverage. The use of derivatives may also create leveraging risk. Leverage is a speculative technique that may expose an Account to greater risk and increased costs. For example, leverage may cause an Account to set aside or liquidate portfolio assets to satisfy its obligations, including at times when it may be disadvantageous to do so. Leveraging transactions pursued by an Account may increase its duration and sensitivity to interest rate movements. In addition, leverage, including borrowing, may cause an Account to be more volatile than if the Account had not been leveraged because leverage tends to exaggerate the effect of any increase or decrease in the value of an Account's portfolio securities and may lead to a loss in the Account in excess of the capital commitment. Interest, fees and other expenses of leverage are generally borne entirely by the Account, which would have the effect of reducing investment returns. For some Accounts, fees received by PIMCO will be based on an Account's total assets (including assets attributable to certain types of leverage). In these circumstances, PIMCO has a financial incentive for the Account to use certain forms of leverage, which may create a conflict of interest between PIMCO, on the one hand, and its Clients or other investors in an Account, on the other.

Limited Assets Risk. When the value of an Account falls below the PIMCO minimum account size established by PIMCO for a particular strategy, PIMCO may be limited in pursuing the objectives of the Account. For example, PIMCO may be constrained in its ability to gain exposure to certain instruments because the allocation may not be meaningful (i.e., an odd lot allocation). Therefore, the Account may be less diversified than other Accounts with assets that exceed the minimum account size. Similarly, the Account may have performance dispersion that is greater than other Accounts in the same investment strategy due to variations in portfolio holdings.

Liquidity Risk. Liquidity risk exists when particular investments are difficult to purchase or sell and may be particularly pronounced for long-term investments. An Account's investments in illiquid securities may reduce the returns of the Account because it may be unable to sell the illiquid securities at an advantageous time or price or possibly require an Account to dispose of other investments at unfavorable times or prices in order to satisfy its obligations, which could prevent the Account from taking advantage of other investment opportunities. Additionally, the market for certain investments may become illiquid under adverse market or economic conditions independent of any specific adverse changes in the conditions of a particular issuer, such as during political events (including periods of rapid interest rate changes). There can be no assurance that an investment that is deemed to be liquid when purchased will continue to be liquid while it is held by an Account and/or when an Account wishes to dispose of it. Bond markets have consistently grown over the past three decades while the capacity for traditional dealer counterparties to engage in fixed income trading has not kept pace and in some cases has decreased. As a result, dealer inventories of corporate bonds, which provide a core indication of the ability of financial intermediaries to "make markets," are at or near historic lows in relation to market size. Because market makers provide stability to the market through their intermediary services, the significant reduction in dealer inventories could potentially lead to decreased liquidity and increased volatility in the fixed income markets. Such issues may be

exacerbated during periods of economic uncertainty. In such cases, an Account, due to potential limitations on investments in illiquid securities and the difficulty in purchasing and selling such securities or instruments, may be unable to achieve its desired level of exposure to a certain sector or may be unable to sell investments when desired or at a favorable price. Illiquid securities may be difficult to value, especially under changing market conditions. To the extent that an Account's principal investment strategy involves securities of companies with smaller market capitalizations, foreign (non-U.S.) securities, Rule 144A securities, Regulation S securities, illiquid sectors of fixed income securities, derivatives or securities with substantial market and/or credit risk, the Account will tend to have the greatest exposure to liquidity risk. Further, fixed income securities with longer durations until maturity face heightened levels of liquidity risk as compared to fixed income securities with shorter durations until maturity. Furthermore, certain Accounts that invest in illiquid securities have regular withdrawal or redemption rights, and such Accounts may be delayed or otherwise unable to meet withdrawal or redemption requests if they are unable to dispose of illiquid positions in an orderly manner. In these circumstances, an Account may, in accordance with the terms of its organizational documents, elect to suspend withdrawals or redemptions, including on a partial and/or temporary basis. For example, an Account may determine to suspend withdrawals or redemptions in a manner intended to restrict redemptions or withdrawals with respect to the portion of such Account's portfolio consisting of certain illiquid positions until such positions have been liquidated. PIMCO has, and may again in the future, institute new structures or shares classes for an Account that are intended to affect such a partial suspension with respect to illiquid securities.

Liquidity risk also refers to the risk that an Account may be required to hold additional cash or sell other investments in order to obtain cash to close out derivatives or meet the liquidity demands that derivatives can create to make payments of margin, collateral, or settlement payments to counterparties. An Account may

have to sell a security at a disadvantageous time or price to meet such obligations. Actions by governments and regulators may have the effect of reducing market liquidity, market resiliency and money supply, such as through higher rates and tighter financial regulations.

Risks of Originated Investments. An Account may originate certain investments and may syndicate a portion of one or more investments to other affiliated funds or third parties, subject to the completion of each such purchaser's own investment-review process, the Account's investment guidelines and applicable law. In originating and purchasing loans, an Account competes with a broad spectrum of lenders, some of which may have greater financial resources than the Account. Increased competition for, or a diminishment in the available supply of, qualifying loans could result in lower yields on such loans, which could reduce returns to Accounts. Prior to any syndication of such loans, or if such syndication is not successful, an Account's exposure to the originated investment may exceed the exposure that the Account intends to have over the long-term or would have had if it had purchased such investment in the secondary market rather than originating it. Specifically, if an Account is unable to sell, assign or successfully close transactions for the loans that it originates, the Account will be forced to hold its interest in such loans for an indeterminate period of time. This could result in an Account's investments being over-concentrated in certain borrowers. In such circumstances, the Account may elect to sell all or a portion of an originated investment at a loss in order to rebalance the Account's portfolio. The level of analytical sophistication, both financial and legal, necessary for successful financing to borrowers, particularly borrowers experiencing significant business and financial difficulties, is unusually high. There is no assurance that PIMCO will correctly evaluate the value of the assets collateralizing an Account's loans or the prospects for successful repayment or a successful reorganization or similar action. In any reorganization or liquidation proceeding relating to a company that an Account lends to; the Account may lose all or part of the amounts advanced to the borrower or may be required to accept collateral with

a value less than the amount of the loan advanced by the Account or its affiliates to the borrower.

In addition, originating loans could subject the Account, PIMCO or their affiliates, to various regulatory regimes, such as lender licensing requirements. Some lender licensing regimes may provide for exemptions from licensing for certain activities, and if PIMCO or its Accounts rely on such exemptions, there is risk that the relevant regulator could disagree with the applicability of the exemption and impose fines, restrict activities or take other adverse actions. As a result of complying with such regulatory regimes, restrictions may be placed on an Account or PIMCO's ability to take certain actions to protect the value of its investments in such assets and impose compliance costs. Loan origination and servicing companies are routinely involved in legal proceedings concerning matters that arise in the ordinary course of business. These legal proceedings range from actions involving a single plaintiff to class action lawsuits with potentially tens of thousands of class members. In addition, a number of participants in the loan origination and servicing industry (including control persons of industry participants) have been the subject of regulatory actions by state regulators, including state Attorneys General, and by the federal government. Governmental investigations, examinations or regulatory actions, or private lawsuits, including purported class action lawsuits, may adversely affect such companies' financial results. To the extent an Account seeks to engage in origination and/or servicing directly, or has a financial interest in, or is otherwise affiliated with, an origination or servicing company, the Account will be subject to enhanced risks of litigation, regulatory actions and other proceedings. As a result, an Account may be required to pay legal fees, settlement costs, damages, penalties or other charges, any or all of which could materially adversely affect the Account and its investments.

A number of regulatory authorities have taken action against certain loan originators and servicers for alleged violations of laws. Certain of those actions prohibit those servicers from pursuing foreclosure actions. In the future, additional jurisdictions could seek similar limitations on

the ability of loan servicers to take actions (such as pursuing foreclosures) that may be essential to service and preserve the value of the loans on behalf of their holders. Any such limitations that applied to a servicer of the loans could adversely affect the holder's ability to realize proceeds on such loans.

Management Risk. Each actively managed Account is subject to management risk. PIMCO and each individual portfolio manager will apply investment techniques and risk analyses and will, in some cases, rely partially or entirely upon or be informed by one or more quantitative models in making investment decisions for actively managed Accounts. PIMCO and each portfolio manager may determine that certain factors are more significant than others, but there can be no guarantee that these decisions will produce the desired results or that the due diligence conducted by PIMCO and its portfolio managers will evaluate every factor prior to investing in a company or issuer and expose all material risks associated with an investment. Additionally, PIMCO and its portfolio managers may not be able to identify suitable investment opportunities and may face competition from other investment managers when identifying and consummating certain investments. There can be no assurance that PIMCO will be able to identify and obtain a sufficient number of investment opportunities to invest the full amount of capital that may be available in an Account. Certain securities or other instruments in which an Account seeks to invest may not be available in the quantities desired. In addition, regulatory restrictions, actual or potential conflicts of interest or other considerations may cause PIMCO to restrict or prohibit participation in certain investments. In such circumstances, PIMCO or the individual portfolio managers may determine to pursue other investments and/or purchase other securities or instruments as substitutes. Such other investments, substitute securities or instruments may not perform as intended, which could result in losses to the Account. To the extent an Account employs strategies targeting perceived pricing inefficiencies, arbitrage strategies or similar strategies, it is subject to the risk that the pricing or valuation of the securities and instruments involved in

such strategies may change unexpectedly, which may result in reduced returns or losses to the Account. Each Account is also subject to the risk that deficiencies in the internal systems or controls of PIMCO or another service provider will cause losses for the Account or hinder Account operations. For example, trading delays or errors (both human and systematic) could prevent an Account from purchasing a security expected to appreciate in value. Additionally, legislative, regulatory, or tax developments may affect the investment techniques available to PIMCO and the individual portfolio manager in connection with managing an Account. There also can be no assurance that all of the personnel of PIMCO, including the portfolio manager(s) for an Account, will continue to be associated with PIMCO for any length of time. The loss of the services of one or more key employees of PIMCO could have an adverse impact on an Account's ability to realize its investment objective.

Market Risk. The market price of securities owned by an Account may go up or down, sometimes rapidly or unpredictably. Securities may decline in value due to factors affecting securities or credit markets generally or particular industries represented in the securities markets. The value of a security may decline due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in inflation, interest or currency rates, adverse changes to credit markets or adverse investor sentiment generally. The value of a security may also decline due to factors that affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously even if the performance of those asset classes is not otherwise historically correlated. Investments may also be negatively impacted by market disruptions and by attempts by other market participants to manipulate the prices of particular investments. Current market conditions may pose heightened risks with respect to Accounts that invest in fixed income securities. Any additional interest rate increases could cause the value of

an Account that invests in fixed income securities to decrease. As such, fixed income securities markets may experience heightened levels of interest rate, volatility and liquidity risk.

Additionally, exchanges and securities markets may close early, close late or issue trading halts on specific securities, which may result in, among other things, an Account being unable to buy or sell certain securities or financial instruments at an advantageous time or accurately price its portfolio investments.

Minority Investments Risk. Accounts, especially Accounts focusing on debt securities, will generally hold minority or non-controlling interests. Such investments may not give PIMCO the ability to influence the management of the issuer or to elect a representative to the issuer's board of directors. In addition, the management of the issuer or its shareholders may have economic or business interests which are inconsistent with those of Accounts, and they may be in a position to take action contrary to such Account's investment objectives. A minority or non-controlling interest may be especially adverse to Accounts in circumstances, such as certain stressed or distressed situations, where an element of control or influence might be beneficial to the subject investment.

Mortgage Loans Risk. Residential mortgage loans are secured by single-family residential property and are subject to risks of delinquency and foreclosure and risks of loss. An Account may hold or be exposed to non-qualified residential mortgage loans made to borrowers who have poor or limited credit histories, employment history and/or tax documentation and, as a result, do not qualify as qualified mortgages. An Account may also hold or be exposed to mortgages secured by junior liens on a property. Such mortgages have materially higher rates of delinquency, foreclosure and risk of loss. Commercial mortgage loans are generally secured by multi-family or commercial property and are subject to risks of delinquency and foreclosure, and risks of loss that may be greater than similar risks associated with residential mortgage loans that are secured by single-family residential property. The ability of a borrower to repay a

loan secured by income-producing property is dependent primarily upon the successful operation of such property. If the net operating income of the property is reduced (as can occur as a result of property management decisions, competition from other properties and changes in law or regulation, among other factors), the borrower's ability to repay the loan may be impaired.

In addition, various state licensing requirements may apply with respect to investments in loans, including mortgage loans, and other similar assets. The licensing requirements could apply depending on the location of the borrower or the location of the collateral securing the loan. In states in which it is required to be licensed, PIMCO or the Account will be required to comply with applicable laws and regulations, including consumer protection and anti-fraud laws, which could impose restrictions on PIMCO's ability to take certain actions to protect the value of investments in such assets and impose compliance costs. Failure to comply with such laws and regulations could, among other penalties, require an Account to divest assets located in or secured by real property at disadvantageous times or prices.

Please see also "Mortgage-Related and Other Asset-Backed Securities Risk" and "Real Estate Risk" for a description of certain other risks associated with investing in mortgage loans.

Mortgage-Related and Other Asset-Backed Securities Risk. Mortgage-related and other asset-backed securities represent interests in "pools" of mortgages or other assets such as consumer loans or receivables held in trust and often involve risks that are different from or possibly more acute than risks associated with other types of debt instruments. Generally, rising interest rates tend to extend the duration of fixed rate mortgage-related securities, making them more sensitive to changes in interest rates. Compared to other fixed income investments with similar maturity and credit, mortgage-related securities may increase in value to a lesser extent when interest rates decline and may decline in value to a similar or greater extent when interest rates rise. As a result, in a period of rising interest rates, if an

Account holds mortgage-related securities, it may exhibit additional volatility since individual mortgage holders are less likely to exercise prepayment options, thereby putting additional downward pressure on the value of these securities. This is known as extension risk. In addition, adjustable and fixed rate mortgage-related securities are subject to prepayment risk. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of an Account because the Account may have to reinvest that money at the lower prevailing interest rates. In addition, the creditworthiness, servicing practices, and financial viability of the servicers of the underlying mortgage pools present significant risks. For instance, a servicer may be required to make advances in respect of delinquent loans underlying the mortgage-related securities; however, servicers experiencing financial difficulties may not be able to perform these obligations. Additionally, both mortgage-related securities and asset-backed securities are subject to risks associated with fraud or negligence by, or defalcation of, their servicers. If PIMCO or its affiliates or Accounts originates mortgage-related securities or asset-backed securities, its Accounts may be subject to lender liability and other risks.

Mortgage-related securities are also subject to the risks of the underlying loans. In some circumstances, a servicer's or originator's mishandling of documentation related to the underlying collateral (e.g., failure to properly document a security interest in the underlying collateral) may affect the rights of security holders in and to the underlying collateral. In addition, the underlying loans may have been extended pursuant to inappropriate underwriting guidelines, to no underwriting guidelines at all, or to fraudulent origination practices. The owner of a mortgage-backed security's ability to recover against the sponsor, servicer or originator is uncertain and is often limited.

An Account's investments in other asset-backed securities are subject to risks similar to those associated with mortgage-related securities, as well as additional risks associated with the nature of the assets and the servicing of those assets. The underlying assets of asset-backed

securities may include receivables of any kind, including, without limitation, such items as motor vehicle installment sales or installment loan contracts, leases of various types of real and personal property, and receivables from credit card agreements. (subject to its investment guidelines and applicable law) may invest in any tranche of mortgage-related or other asset-backed securities, including junior and/or equity tranches, which generally carry higher levels of the foregoing risks. Direct investments in mortgages and other types of collateral are subject to risks similar (and in some cases to a greater degree) to those described above. Please see also “Mortgage Loan Risk.”

Municipal Securities Risk. Municipal securities are issued by or on behalf of states, territories, possessions and local governments and their agencies and other instrumentalities and may be secured by the issuer’s general obligations or by the revenue associated with a specific capital project. Both “general obligation” municipal bonds and “revenue” bonds are subject to interest rate, credit and market risk, and uncertainties related to the tax status of a municipal bond, or the rights of investors invested in these securities. The ability of an issuer to make payments could be affected by litigation, legislation or other political events or the bankruptcy of the issuer. In the event of bankruptcy of such an issuer, an Account investing in the issuer’s securities could experience delays in collecting principal and interest, and the Account may not, in all circumstances, be able to collect all principal and interest to which it is entitled. In addition, imbalances in supply and demand in the municipal market may result in a deterioration of liquidity and lack of price transparency in the market. At certain times, this may affect pricing, execution, and transaction costs associated with a particular trade. The value of certain municipal securities, in particular obligation debt, may also be adversely affected by rising health care costs, increasing unfunded pension liabilities, changes in accounting standards, and by the phasing out of federal programs providing financial support. Municipal securities may be less liquid than taxable bonds and there may be less publicly available information on the financial condition of

municipal securities issuers than for issuers of other securities, and the investment performance of an Account investing in municipal securities may therefore be more dependent on the analytical abilities of PIMCO than if the Account held other types of investments such as stocks or taxable bonds. The secondary market for municipal securities also tends to be less well-developed or liquid than many other securities markets, a by-product of lower capital commitments to the asset class by the dealer community, which may adversely affect an Account’s ability to sell municipal securities it holds at attractive prices or value municipal securities. Lower rated municipal bonds are subject to greater credit and market risk than higher quality municipal bonds.

Certain Accounts may invest in municipal securities (including taxable municipal securities) issued by Puerto Rico. An Account’s investments in municipal securities issued by Puerto Rico may be particularly affected by political, economic, regulatory or restructuring developments affecting the ability of Puerto Rican municipal issuers to pay interest or repay principal.

Municipal Project Housing-Related Risk. An Account may invest in the bonds of projects focused on low-income, affordable or other housing developments and businesses located in low-income areas or invest in or originate loans that finance or are generally related to such projects. There are significant risks associated with an Account’s investment in the bonds of these types of projects and loans related to such projects. There may be federal, state and local governmental regulatory restrictions on the operation, rental and transfer of these projects, such as the requirement that the owners of these affordable housing developments rent or sell certain residential units to persons or families of low or moderate income and that the amount of rent that may be charged for these units may be less than market rates. These restrictions may adversely affect economic performance relative to properties that are not subject to these restrictions. There are also no assurances that a project owner will be able to achieve and maintain sufficient rental income in order to pay all operating expenses and maintenance and repair costs of such a

project and the debt service on the related bonds or loan on a timely basis. In the event that a project owner is unable to pay all such costs, expenses and debt service, a default on the related bonds or loan is likely to occur.

Sanctions, Anti-Corruption, Anti-Money Laundering and Related Considerations. Economic sanctions administered by the U.S. and other jurisdictions may prohibit PIMCO, its personnel and an Account from engaging in transactions with or in certain countries, with or in specified sectors of certain countries, with certain individuals and companies, and with respect to certain products (including digital assets) and securities. PIMCO seeks to comply with all applicable economic sanctions laws, including U.S. and non-U.S. sanctions laws. In some cases, PIMCO will seek to comply with U.S. or non-U.S. sanctions laws even if the direct applicability of those laws is unclear. PIMCO may be compelled to comply with such laws even if the Client or Account is not otherwise subject to such laws, which may in certain circumstances present conflicts of law situations.

In the U.S., OFAC administers and enforces laws, Executive Orders and regulations establishing U.S. economic and trade sanctions that prohibit or restrict dealings with specified countries, entities, individuals, commodities, and securities, and in specified sectors of certain countries. These sanctions impose restrictions on an Account's investment activities and apply in the same manner regardless of whether a transaction is denominated in digital currency or traditional fiat currency.

The type and severity of sanctions and other similar measures, including counter sanctions and other retaliatory actions that may be imposed could vary broadly in scope. These types of measures may include, but are not limited to, banning a sanctioned country or certain persons or entities associated with such country from global payment systems that facilitate cross-border payments, restricting securities transactions, restricting dealings with entities that are critical to the infrastructure of securities and related transactions in specific jurisdictions, restricting transactions in specified sectors of certain countries, and freezing the assets of particular

countries, entities or persons. The impact of sanctions and similar measures is often difficult to ascertain, but could, among other things, result in a decline in the value and/or liquidity of affected securities, downgrades in the credit ratings of affected securities, currency devaluation or volatility, and increased market volatility and disruption in the securities or sanctioned country and throughout the world. Sanctions and other similar measures could directly or indirectly limit or prevent an Account from buying and selling securities, receiving interest or principal payments due on the securities, significantly delay or prevent the settlement of securities transactions, adversely impact an Account's liquidity and performance, and/or prevent the liquidation of a Fund or Account holding sanctioned securities.

In addition, should an existing investment become subject to sanctions or other restrictions, PIMCO may be required to block the investment, block or reject payments due in connection with the investment, not be able to divest an asset (including an underperforming asset), or may dispose of the investment at a price that is less than it would have received should PIMCO have managed the investment to exit at a different time or under different circumstances.

Military action by Russia in Ukraine has led to and may lead to additional sanctions and export control restrictions being levied by the U.S., European Union, UK, Canada, and other countries against Russia, Belarus, certain regions in Ukraine, and persons and entities who provide support for Russia's war against Ukraine. The sanctions measures implemented against these regions have evolved rapidly and may continue to do so. However, there is also a possibility that certain countries may begin to ease sanctions as part of a negotiated effort to achieve peace. In the event that some, but not all, relevant jurisdictions ease sanctions, Accounts may not be able to benefit from the easing of certain jurisdictions' sanctions, even if the Account is domiciled in a jurisdiction that is subject to easing of sanctions. The sanctions risks (including credit and currency risks) related to any PIMCO Fund or Account exposed to these

regions, or to persons or entities who provide support for Russia's war in Ukraine, is heightened.

PIMCO also seeks to comply with all applicable anti-corruption laws. This may include both U.S. and non-U.S. anti-corruption laws. In some countries, there is a greater acceptance than in the U.S. of public sector corruption. An Account may be adversely affected because of its unwillingness (or the unwillingness of PIMCO and/or its affiliates) to participate in or otherwise be associated with transactions that violate laws or regulations prohibiting engaging in corrupt practices. Such laws and regulations may make it difficult in certain circumstances for an Account to pursue certain investment opportunities and for portfolio investments to obtain or retain certain business.

In addition, PIMCO seeks to comply with applicable anti-money laundering and anti-terrorist financing laws. These laws, inter alia, may prohibit PIMCO and Accounts from knowingly participating in or assisting financial transactions, including investments in and by an Account or the PIMCO funds, that involve the proceeds of certain specified unlawful activities, generally regardless of transaction type or value. Compliance with applicable anti-money laundering and anti-terrorist financing laws also may cause PIMCO to block, freeze or (in some cases) liquidate the account of a Client if, for example, PIMCO is unable to obtain from the Client information it requires to satisfy its anti-money laundering or sanctions obligations, or has reason to suspect that the Client may be engaged in, or that the Client's funds derive from, illicit activity or sanctioned persons. Such actions may have adverse effects on the Client or Account, as well as on any Fund(s) in which the Client or Account is invested. Further, many jurisdictions are in the process of changing or enhancing their anti-money laundering laws and regulatory guidance, in response to which it may be necessary for PIMCO to update its internal controls, make additional reports to applicable regulators, and/or seek additional identifying information or beneficial ownership information from Clients. For example, the United States has recently adopted certain rules, and has proposed additional rules, that would extend certain anti-money

laundering program requirements to, among others, investment advisers registered with the SEC.

In recent years, the U.S. Department of Justice and the SEC have devoted significant resources to enforcement of the U.S. Foreign Corrupt Practices Act (the "FCPA"). Similarly, OFAC has aggressively pursued enforcement of U.S. economic sanctions. Other jurisdictions, including the UK and Member States of the European Union ("EU"), have also established expansive anti-bribery laws and the UK and EU have implemented economic sanctions against a range of countries and persons. Violations of the FCPA, OFAC's sanctions regulations, or other applicable anti-bribery laws, anti-money laundering laws, or economic sanctions (including violations by partners or controlled investments) could result in, among other things, civil and criminal penalties, material fines, profit disgorgement, injunctions on future conduct, securities litigation and a general loss of investor confidence, any one of which could adversely affect an Account or Fund's ability to achieve its investment objective and/or conduct its operations.

New Investment Vehicles. Certain new investment vehicles, including vehicles that accept qualified individual (non-institutional) investors primarily sourced through third-party brokerage firms, banks, third-party feeder providers, and independent investment advisers ("Retail Vehicles"), will expand PIMCO's client base and could subject PIMCO to new and greater levels of public regulatory scrutiny, regulation, risk of litigation, and reputational risks. The distribution of products suitable for individual investors, including through new channels, whether directly or through market intermediaries, could expose PIMCO to allegations of improper conduct and/or actions by state and federal regulators in the U.S. and regulators in jurisdictions outside of the U.S. with respect to, among other things, product suitability, investor classification, compliance with securities laws, anti-money laundering requirements, conflicts of interest regarding investment allocations, the adequacy of disclosure to customers to whom our products are distributed through those channels, including with respect to frequency and complexity of the valuation

process for private assets and liquidity and execution of timely processes, such as ongoing general management and satisfying investor redemption requests in accordance with organizational documents. There is a risk that PIMCO employees involved in the direct distribution of our products, or employees who oversee independent advisors, brokerage firms and other third parties around the world involved in distributing our products, do not follow our compliance and supervisory procedures. Many of these vehicles could also face significant additional litigation risks, including the increased potential for class actions and other investor lawsuits, which could distract our employees, including our investment executives, and ultimately have a negative impact on PIMCO.

Operational Risk. Accounts are also subject to operational risk associated with the provision of investment management and other services by PIMCO and an Account's other Service Providers. Operational risk is the risk that deficiencies in PIMCO's internal systems (including communications and information systems) or controls, or in those of service providers to whom PIMCO has contractually delegated or engaged to perform certain of its responsibilities or on which it otherwise relies, may cause losses for an Account or hinder Account operations. Operational risk results from inadequate procedures and controls, employee fraud, recordkeeping error, human error, and system failures by PIMCO or Service Providers. Such events may result in losses to an Account. PIMCO is generally not contractually liable to Accounts for operational losses associated with operational risk.

Originating Loans to Companies in Distressed Situations and Related Risks. As part of their investment activities, an Account or its affiliates may originate financing to companies that are experiencing significant financial or business difficulties, including companies involved in bankruptcy or other reorganization and liquidation proceedings. Although the terms of such financing may result in significant financial returns to an Account, they involve a substantial degree of risk. The level of analytical sophistication, both

financial and legal, necessary for successful financing to companies experiencing significant business and financial difficulties is unusually high. There is no assurance that PIMCO will correctly evaluate the value of the assets collateralizing the Account's financing or the prospects for successful repayment or a successful reorganization or similar action. In any reorganization or liquidation proceeding relating to a company that an Account funds; the Account may lose all or part of the amounts advanced to the borrower or may be required to accept collateral with a value less than the amount of the financing advanced by the Account or its affiliates to the borrower.

Participation on Creditors' Committees Risk. Although it has no obligation to do so, PIMCO, on behalf of one or more Accounts, may participate on committees formed by creditors to negotiate the management or potential restructuring of financially troubled companies that may or may not be in bankruptcy or the Account may seek to negotiate directly with the debtors with respect to restructuring issues. If an Account does join a creditors' committee, the participants on the committee would be interested in obtaining an outcome that is in their respective individual best interests and there can be no assurance of obtaining results most favorable to the Account in such proceedings. While such involvement may enable PIMCO to enhance the value of an Account's portfolio investments, it may also prevent the Account from freely disposing of such portfolio investments, while also exposing it to legal claims and adverse publicity (including claims of breach of fiduciary duties, securities claims and other management-related claims). In addition, if PIMCO's representatives are serving as directors of companies which are insolvent or approaching insolvency, such persons may have fiduciary obligations to consider the interest of creditors of such entity as well as the shareholders of such entity. The interests of such parties may be adverse to the interests of an Account. These fiduciary obligations may conflict with PIMCO's obligation to an Account, and PIMCO may cause its representatives to resign from such positions in order to reduce such conflicts. Any involvement by PIMCO representatives (including through serving on a

board of directors, or permanent or ad hoc creditors or steering committees) may also entail a substantial time commitment, which may limit such representatives' ability to participate in other Account matters and investments. PIMCO may also be provided with material non-public information that may restrict its ability to trade in a company's securities or be subject to other limitations on trading. To the extent an Account would otherwise benefit from trades in the company's securities while PIMCO is participating in such activities, PIMCO may be restricted from trading or otherwise limited in its ability to trade on behalf of the Account. Please refer to Item 11, "Inconsistent Investment Positions, Timing of Competing Transactions and Other Conflicts" for additional detail.

Pooled Investment Vehicles and Pass-Through Entities

Risk. Where permitted by the Client's investment guidelines, an Account may invest or take short positions in pooled investment vehicle and pass-through entities, including affiliated or third-party unregistered investment vehicles, investment companies registered under the 1940 Act (including exchange-traded funds and closed-end companies), master limited partnerships and REITs ("Pooled Investment Vehicles"). An Account's investment in Pooled Investment Vehicles may result in the Account bearing the fees and expenses of the Pooled Investment Vehicle, in addition to those of the Account, subject to applicable legal and contractual restrictions. To the extent an Account invests directly in Pooled Investment Vehicles and other "pass-through" entities which are treated as partnerships for federal income taxation purposes, the Account must rely on such vehicles to deliver to it certain tax information that is necessary to complete the Account's own tax returns. If this information is not delivered to the Account in a timely fashion, the Account will be delayed in providing tax information to the investors.

An Account will be dependent on the manager or sponsor of any Pooled Investment Vehicle and may have limited or no ability to influence such manager or sponsor's actions. Moreover, managers or sponsors of Pooled Investment Vehicles may have inconsistent interests with those of an

Account and may take or block actions in a manner adverse to an Account's interests. An Account may have little opportunity to negotiate the terms of an investment in a Pooled Investment Vehicle and may receive incomplete or unreliable information in connection with evaluating any such investment. An Account's ability to withdraw from or transfer its investment in certain Pooled Investment Vehicles will also typically be limited.

While an Account may invest in Pooled Investment Vehicles managed by PIMCO or its affiliates, such affiliation may not mitigate the above risks or otherwise provide the Account with preferential rights.

An Account may engage in transactions with Pooled Investment Vehicles that involve high levels of complexity (e.g., spin-outs, acquisitions of cornerstone positions, portfolios of co-investments and direct investments, and fund restructurings). These transactions may present additional risks that are not present in primary investment transactions or more traditional secondary interest transactions. In particular, any such transaction will typically involve higher transaction costs, increased regulatory risk, and the consent of or negotiations with the Pooled Investment Vehicle's sponsor and/or underlying investors and other qualification requirements that may make such purchase or a sale of an investment more difficult or, ultimately, prevent it.

An Account may invest in exchange-traded funds ("ETFs") as well as derivatives and/or options on ETFs. ETFs are hybrid investment companies that are registered as open-end investment companies or unit investment trusts but possess some of the characteristics of closed-end funds. ETFs often hold a portfolio of common stocks that is intended to track the price and dividend performance of a particular index but may also be actively managed. The market price for ETF shares may be higher or lower than the ETF's net asset value.

Passive ETF Risk. Investments in passive exchange traded funds entail certain risks; in particular, investments in such ETFs involve the risk that the ETF's performance may not track the performance of the index the ETF is designed to track. Unlike the index, an ETF incurs advisory and administrative expenses and transaction costs in trading

securities. In addition, the timing and magnitude of cash inflows and outflows from and to investors buying and redeeming shares in the ETF could create cash balances that cause the ETF's performance to deviate from the index (which remains "fully invested" at all times). Performance of an ETF and the index it is designed to track also may diverge because the composition of the index and the securities held by the ETF may occasionally differ. Although ETFs will generally trade close to net asset value, market volatility, lack of an active trading market for ETF shares, disruptions at market participants (such as Authorized Participants or market makers) and any disruptions in the ordinary functioning of the creation/redemption process may result in ETF shares trading significantly above (at a "premium") or below (at a "discount") net asset value. In addition, errors in the construction, calculation, or transmission of an index could cause an ETF's price to differ materially from its index. As a result, an Account may sustain significant losses when transacting in ETF shares.

Portfolio Holdings Risk. PIMCO serves as investment adviser to various Funds that may have investment objectives, strategies and portfolio holdings that are substantially similar to or overlap with those of an Account, and in some cases, the Funds may publicly disclose portfolio holdings. For example, portfolio holdings for PIMCO-advised actively managed ETFs are required, by the terms of the applicable SEC exemptive relief, to be publicly disclosed each business day. Similarly, PIMCO serves as an investment adviser to Separate Accounts that may have investment objectives, strategies and portfolio holdings that are substantially similar to or overlap with those of an Account, and the Separate Account holdings that are disclosed to the Client or others under the terms of the Client's investment management agreement could be similar or identical to Account holdings. As a result, it is possible that other market participants may use such information for their own benefit, which could negatively impact an Account's execution of purchase and sale transactions.

Quantitative Investing Risk. PIMCO employs and/or relies on algorithms, models or other systems in

connection with many of its investment activities, including research, forecasting, selection, optimization, order routing, execution, and allocation processes (together, "Systems"). These Systems, which may be employed together and operate without human intervention, rely heavily on the use of proprietary and nonproprietary data, software, hardware, and intellectual property, including data, software and hardware that may be licensed or otherwise obtained from third parties. The use of such Systems has inherent limitations and risks. Although we take reasonable steps to develop and use Systems appropriately and effectively, there can be no assurance that we will successfully do so. The Systems are extremely complex and may involve the use of financial, economic, econometric and statistical theories, research and modeling and related translation into computer code. Errors may occur in the design, writing, testing, validation, monitoring, and/or implementation of Systems, including in the manner in which Systems function together. The effectiveness of Systems may diminish over time, including as a result of market changes and changes in the behavior of market participants. The quality of the resulting analysis, investment selections, portfolio construction, asset allocations, optimizations, proposed and executed trades, risk management, allocations of investment opportunities and trading strategies depends on a number of factors including the accuracy and quality of data inputs into the Systems, including through automated and manual integration of completed transactions, the mathematical and analytical assumptions and underpinnings of the Systems' coding, the accuracy in translating those analytics into program code or interpreting the output of a System by another System in order to facilitate a transaction, change in market conditions, the successful integration of the various Systems into the portfolio selection and trading process and whether actual market events correspond to one or more assumptions underlying the Systems. Accordingly, Systems are subject to errors and/or mistakes ("System Incidents") that may adversely impact Accounts. For example, System Incidents may result in Systems performing in a manner other than as intended,

including but not limited to, failure to achieve desired performance or investment objectives, execution of unanticipated trades or failure or delays in executing intended trades, failure to properly allocate trades, failure to properly gather and organize available data, or failure to identify hedging or other risk management opportunities or targets, all of which may adversely impact Accounts.

Given the complexity of the investments and strategies of certain Accounts, PIMCO relies on quantitative models, data, execution and trading algorithms (including, without limitation, algorithms utilized in third-party automated trading platforms that match buyers and sellers based on price and other characteristics of the underlying investment) supplied by third parties for certain Accounts. Such models, data and algorithms are used to construct sets of transactions and investments, to implement, route and execute investment decisions, and to provide risk management insights. When the third-party models, data or algorithms prove to be incorrect or incomplete, any decisions or investments made in reliance thereon expose Accounts to additional risks. For example, PIMCO does not have the same insight or access into the construction, coding or testing of the algorithms, and PIMCO and applicable Accounts will be exposed to systems, cyber security and other risks associated with the third-party models, data or algorithms. For these reasons, and subject to PIMCO satisfying its standard of care, PIMCO generally will not compensate Accounts for any losses associated with third-party models, data, or algorithms and Accounts generally will bear all such losses. PIMCO, subject to satisfying its standard of care, generally does not expect to disclose certain such events to applicable Accounts.

The Systems rely heavily on appropriate data inputs, and it is impossible and impracticable to factor all relevant, available data into the Systems. PIMCO will use its discretion to determine what data to gather and what subset of data the Systems utilize. In addition, due to the automated nature of gathering data, the volume and depth of data available, the complexity and often manual nature of data cleaning, and the fact that the data may

come from third-party sources, it is inevitable that not all desired and/or relevant data will be available to, or processed by, PIMCO at all times. Where incorrect or incomplete data is available, PIMCO may, and often will, continue to generate forecasts and make investment decisions based on the data available. Additionally, PIMCO may determine that certain available data, while potentially useful in generating forecasts and/or making investment decisions, is not cost effective to gather due to, among other factors, the technology costs or third-party vendor costs and, in such cases, PIMCO will not utilize such data. PIMCO has full discretion to select the data it utilizes and may elect to use or may refrain from using any specific data or type of data in the Systems. The data used in the development and use of Systems may not be the most accurate data available or free of errors.

Further, if incorrect market or other data is entered into an otherwise properly functioning System, the Systems' resulting output, including proposed trades or investment recommendations, may be inconsistent with the underlying investment strategy. Even if data is input correctly, prices anticipated by the data through the Systems may differ substantially from market prices, especially for financial instruments with complex characteristics, such as derivatives, in which certain Accounts may invest. Most Systems require continual monitoring and enhancements, and there is no guarantee that such monitoring and enhancements will be successful or that Systems will operate as intended. The successful deployment of the investment strategy, the portfolio construction process and/or the trading process could be severely compromised by software or hardware malfunctions, viruses, glitches, connectivity loss, system crashes or various other System Incidents, including, in particular, where multiple Systems contribute to the process, in particular where there is no human intervention (e.g., where one System develops a signal or possible trade, another System interprets or optimizes that recommended signal or possible trade to facilitate a trade order, another System routes and executes that trade order, and another System allocates the completed trade, and where this process runs again

in reliance on the preceding automated transaction). System Incidents may be difficult to detect and PIMCO may not immediately or ever detect certain System Incidents, which may have an increasing impact on an Account over time. PIMCO has adopted policies and procedures that it believes are reasonably designed to prevent, detect, escalate and remediate System Incidents. PIMCO will address System Incidents in accordance with this policy but there is no guarantee that measures taken to address a System Incident will be successful. PIMCO generally does not classify System Incidents to be Trade Errors (as defined below) and Accounts generally will bear all losses associated with System Incidents, subject to PIMCO satisfying its standard of care. Further, PIMCO generally does not expect to disclose System Incidents to Clients. Please see Item 12, "Brokerage Practices," for additional information on Trade Errors.

Real Estate Risk. An Account that invests in real estate, real estate-related securities or real estate-linked derivative instruments is subject to risks directly or indirectly associated with ownership of real estate, and the real estate market generally. The real estate industry is extensively regulated at the federal, state and local levels and subject to frequent regulatory change. In addition, real estate investments are subject to a variety of inherent risks that may have an adverse impact on the values of, and returns (if any) from, such investments, including risks related to: lack of liquidity; difficulty in valuation; changes in local, national and international economic conditions; supply and demand, including reduced demand for commercial and office space as well as increased maintenance or tenant improvement costs to convert properties for other uses, default risk of tenants and borrowers, the financial condition of tenants, buyers and sellers, and the inability to re-lease space on attractive terms or to obtain mortgage financing on a timely basis or at all; interest rate fluctuations; zoning laws and entitlements; regulatory overlays; environmental liabilities; energy prices; title risks; the ongoing need for capital improvements; patent or latent defect in improvements; availability of financing; bankruptcy and other credit risks of tenants, operating partners or other relevant parties; natural catastrophes, war, terrorism,

vandalism, and squatting or holding over; risk of uninsurable losses; breach of contract relating to real estate; development or construction cost overruns and the quality, viability and strategy of third-party developers, operators, managers, servicers or controlling parties. Real estate historically has experienced significant fluctuations and cycles in value, and an Account may buy and/or sell investments at less than optimal times. Real estate income and values may also be affected by demographic trends, such as population shifts or changing tastes, preferences (such as remote work arrangements) and social values. In addition, real estate values have been subject to substantial fluctuations and declines on a local, regional and national basis in the past and may continue to be in the future. During periods of rising interest rates, real estate securities may lose appeal for investors who may seek higher yields from other income-producing investments. Rising interest rates may also contribute to financing for property purchases and improvements becoming more costly and difficult to obtain. Developments following the onset of COVID-19 have adversely impacted certain commercial real estate markets, causing the deferral of mortgage payments, renegotiated commercial mortgage loans, commercial real estate vacancies or outright mortgage defaults, and potential acceleration of macro trends such as work from home and online shopping which may negatively impact certain industries, such as brick-and-mortar retail.

Separately, certain service providers to the Account and/or its subsidiaries are expected to be Dual Service Providers, resulting in conflicts further discussed in Item 11.

An investment in REITs or in a security or derivative instrument that is linked to the value of a REIT is subject to additional risks, such as poor performance by the manager of the REIT, adverse changes to the tax laws or failure by the REIT to qualify for tax-free pass-through of income under applicable law, as amended. In addition, some REITs have limited diversification because they invest in a limited number of properties, a narrow geographic area, or a single type of property. Also, the

organizational documents of a REIT may contain provisions that make changes in control of the REIT difficult and time-consuming. Investments in non-traded REITs are generally subject to greater risks than investments in publicly-traded REITs. REITs are sometimes informally characterized as: equity REITs, mortgage REITs and hybrid REITs. Equity REITs invest the majority of their assets directly in real property. They derive their income primarily from rents received and any profits on the sale of their properties. Equity REITs can also realize capital gains by selling properties that have appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive most of their income from mortgage interest payments. As its name suggests, hybrid REITs combine characteristics of both equity REITs and mortgage REITs. An investment in a REIT, or in a real estate linked derivative instrument linked to the value of a REIT, is subject to the risks that impact the value of the underlying properties of the REIT. These risks include loss to casualty or condemnation, and changes in supply and demand, interest rates, zoning laws, regulatory limitations on rents, property taxes and operating expenses. Real estate income and values may also be affected by demographic trends, such as population shifts or changing tastes, preferences (such as remote work arrangements) and social values. Other factors that may adversely affect REITs include poor performance by management of the REIT, changes to the tax laws, or failure by the REIT to qualify for favorable tax treatment. The securities of REITs involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements because of interest rate changes, economic conditions and real estate market conditions (such as oversupply of real estate for rent or sale or vacancies, potentially for extended periods), reduced demand for commercial and office space as well as increased maintenance or tenant improvement costs and costs to convert properties for other uses, and default risk and credit quality of tenants and borrowers and other factors. For example, the value of these securities may decline when interest rates rise and will also be

affected by the real estate market and by the management or development of the underlying.

The Account may invest in private real estate investments directly or indirectly through one or more REIT Subsidiaries. Exposure to private commercial real estate comes with a variety of risks. Lease defaults, terminations by one or more tenants or landlord-tenant disputes may reduce the REIT Subsidiary's revenues and net income, which would reduce the amount of income payable by the REIT Subsidiary to the Account. Any of these situations may result in extended periods during which there is a significant decline in revenues, or no revenues generated by a property. If this occurred, it could adversely affect the Account's performance.

An Account or some of the REITs in which an Account may invest may be permitted to hold regular or residual interests in real estate mortgage investment conduits ("REMICs") or debt or equity interests in taxable mortgage pools ("TMPs"). An Account may also hold interests in "Re-Securitizations", which are interests in securitizations formed by the contribution of asset backed or other similar securities into a trust which then issues securities in various tranches. An Account may participate in the creation of a Re-Securitization by contributing assets to the trust and receiving junior and/or senior securities in return. An interest in a Re-REMIC security may be riskier than the securities originally held by and contributed to the trust, and the holders of the Re-Securitizations securities will bear the costs associated with the securitization.

Please see also "Mortgage Loans Risk" and "Mortgage-Related and Other Asset-Backed Securities Risk."

Reliance on Portfolio Company Management Risk.

The success or failure of a portfolio company investment may depend to a significant extent on the portfolio company's management team, including in cases where PIMCO and/or Accounts control the portfolio company. A member of a portfolio company's management team may engage in activities that pose legal, regulatory, financial, reputational or other risks to the investment, and such activities may be difficult or impossible to detect.

Repurchase Agreement Risk. In any repurchase transaction to which an Account is a party, collateral for a repurchase agreement may include cash items and obligations issued by the U.S. Government or its agencies or instrumentalities. For certain Accounts, however, collateral may include instruments other than cash items and obligations issued by the U.S. Government or its agencies or instrumentalities, including securities that the Account could not hold directly under its investment strategies without the repurchase obligation.

The type of collateral underlying repurchase agreements may also pose certain risks for an Account. Lower quality collateral and collateral with longer maturities may be subject to greater price fluctuations than higher quality collateral and collateral with shorter maturities. If the repurchase agreement counterparty were to default, lower quality collateral may be more difficult to liquidate than higher quality collateral. Should the counterparty default and the amount of collateral not be sufficient to cover the counterparty's repurchase obligation, the Client would retain the status of an unsecured creditor of the counterparty (i.e., the position the Client would normally be in if it were to hold, pursuant to its investment policies, other unsecured debt securities of the defaulting counterparty) with respect to the amount of the shortfall. As an unsecured creditor, the Client would be at risk of losing some or all of the principal and income involved in the transaction. Repurchase agreements and purchase and sale contracts may be entered into only with financial institutions that meet certain minimum capital requirements. Repurchase agreements subject an Account to counterparty credit risks as otherwise described above.

Restricted Securities Risk. An Account's investments may include securities ("restricted securities") that have not been registered for sale to the public under the U.S. Securities Act pursuant to an exemption from registration. Restricted securities are generally only sold to institutional investors in private sales from the issuer or from an affiliate of the issuer. These securities may be less liquid than securities registered for sale to the general public. The liquidity of a restricted security may be affected by a number of factors, including: (i) the

credit quality of the issuer; (ii) the frequency of trades and quotes for the security; (iii) the number of dealers willing to purchase or sell the security and the number of other potential purchasers; (iv) dealer undertakings to make a market in the security; and (v) the nature of the security and the nature of marketplace trades. Also, restricted securities may be difficult to value because market quotations may not be readily available.

Restrictions on Foreign Investment Risk. A number of emerging securities markets restrict foreign investment to varying degrees. Furthermore, repatriation of investment income, capital and the proceeds of sales by foreign investors may require governmental registration and/or approval in some countries. While an Account that may invest in securities and instruments that are economically tied to emerging market countries will only invest in markets where these restrictions are considered acceptable, new or additional repatriation or other restrictions might be imposed subsequent to the Account's investment. If such restrictions were to be imposed subsequent to the Account's investment in the securities markets of a particular country, PIMCO's response might include, among other things, applying to the appropriate authorities for a waiver of the restrictions or engaging in transactions in other markets designed to offset the risks of decline in that country. Such restrictions will be considered in relation to the Account's liquidity needs and all other acceptable positive and negative factors. Some emerging markets limit foreign investment, which may decrease returns relative to domestic investors. An Account may seek exceptions to those restrictions. If those restrictions are present and cannot be avoided by the Account, the Account's returns may be lower.

Second Lien Loans. First lien leveraged loans generally include loans that are not (and cannot by their terms become) subordinate in right of payment to any other obligation of the obligor of the loan and are secured by a valid first-priority perfected security interest or lien in, to or on specified collateral securing the obligor's obligations under the related loan. Second lien loans are subordinated (with respect to liquidation preferences

with respect to pledged collateral) to other secured obligations of the related obligors secured by all or a portion of the collateral securing such loan. Second lien loans may be subordinated to senior secured obligations, including first lien leveraged loans, with respect to specific collateral of the obligor and, in the event that the proceeds or value of such collateral is insufficient to repay the first lien debt obligations, the second lien loans will likely suffer a loss of principal and interest. Second lien loans generally have rights that are subordinated to those of the senior secured obligations. Second lien loans are subject to the same risks as senior secured loans, including credit risk, market risk, liquidity risk and interest rate risk. However, due to the subordinated nature of these loans they involve a higher degree of overall risk than the senior secured loans of the same obligor.

Second lien loans are typically subject to intercreditor arrangements, the provisions of which may prohibit or restrict the ability of the holder of a second lien loan to (i) exercise remedies against the collateral with respect to their second liens; (ii) challenge any exercise of remedies against the collateral by the first lien lenders with respect to their first liens; (iii) challenge the enforceability or priority of the first liens on the collateral; and (iv) exercise certain other secured creditor rights, both before and during a bankruptcy of the borrower. In addition, during a bankruptcy of the obligor, the holder of a second lien loan may not be required to give advance consent to (a) any use of cash collateral approved by the first lien creditors; (b) sales of collateral approved by the first lien lenders and the bankruptcy court, so long as the second liens continue to attach to the sale proceeds; and (c) debtor-in-possession financings.

Secondary Transactions in Private Fund Interests. An Account may acquire interests in private funds that have completed their closings. Secondary transactions may consist of purchases of underlying private fund interests from existing investors or other types of “structured” secondary investments that provide economic exposure to existing private funds or their investments. In many cases, the economic, financial and other information

available to and used by PIMCO in selecting and structuring such secondary investments may be incomplete or unreliable. Valuation of secondary investments may be difficult since there generally will be no established market for such interests. Often PIMCO will also not have the opportunity to negotiate the terms of the underlying private funds or obtain the rights and privileges it might obtain if it acquired the interests directly from the fund. Moreover, the purchase price of secondary transactions will be subject to negotiation with the sellers of such interests and may, in certain cases, require an Account’s assumption of certain contingent liabilities resulting from activity that transpired prior to the acquisition (such as an indemnification obligation in respect of an act or omission occurring prior to the date of the acquisition of the secondary investment). Further, secondary transactions may involve conflicts with other Accounts which may hold positions in the underlying funds or their investments.

Securitization Risk. In connection with the acquisition, financing or disposition of certain investments, an Account may participate in the securitization of certain investments, including through the formation of one or more CDOs, CLOs or repackaged securities, while sometimes retaining the exposure to the performance of these investments. This would sometimes involve creating a special purpose vehicle, contributing a pool of assets to such special purpose vehicle (each, a “Securitized Vehicle”), and selling debt interests in such Securitized Vehicle to purchasers (including potentially other clients of PIMCO, which may result in conflicts of interest). An Account may retain equity of the Securitized Vehicle, together possibly with other tranches as well. In the case of loans or securities that the Securitized Vehicle has sold instead of retained, the Securitized Vehicle may be required to indemnify purchasers for losses or expenses incurred as a result of a breach of a representation or warranty. Any significant repurchases or indemnification payments could materially and adversely affect the liquidity, financial condition and operating results of the Securitized Vehicle and/or any Account which participated or invested in the securitization.

Subject to certain exceptions, “risk retention” rules in the U.S. require the “sponsor” of a securitization transaction (or a majority-owned affiliate of the sponsor) to retain, unhedged, a portion of the credit risk associated with the securitization. In addition, “risk retention” rules in the EU and the UK place a requirement on EU and UK institutional investors to ensure that the required retention is made by the “originator”, “sponsor,” or “original lender.” In respect of securitization transactions, the securities of which are issued on or after January 1, 2019, and to any securitization that creates new securitization positions on or after January 1, 2019, such rules place a direct requirement on the “originator”, “sponsor” or “original lender” to make the required retention (in each case to the extent the applicable law applies). The impact of the risk retention rules on the securitization markets and on the future performance of an Account is still uncertain. It is likely, however, that the requirements imposed by these rules will increase the costs to originators and securitizers of asset-backed securities in many cases, and these increased costs could be passed along to Accounts as investors in such securitized products. In addition, it is possible that PIMCO or an Account will be considered to be a sponsor (or in respect of the EU or UK risk retention rules, a sponsor, originator, or original lender) of a securitization and as a result be required to comply (directly or indirectly) with the risk retention requirements of the risk retention rules.

Senior Loan Risk. An Account that invests in senior loans is subject to credit risk, call risk, settlement risk, risk of subordination to other creditors, insufficient or lack of protection under federal securities laws and liquidity risk. Senior loans are often issued by heavily indebted companies and therefore can be particularly susceptible to a wide variety of risks. Senior loans may not be backed by adequate collateral and can be subject to faster payment schedules than other types of obligations. These instruments are considered predominately speculative with respect to an issuer’s continuing ability to make principal and interest payments and may be more volatile and more difficult to value than other types of instruments (including other debt securities). In

addition, an economic downturn or individual corporate developments could adversely affect the market for these instruments and reduce an Account’s ability to sell these instruments at an advantageous time or price. An economic downturn would generally lead to a higher non-payment rate and, a senior loan may lose significant market value before a default occurs. In addition, the senior loans in which an Account invests may not be listed on any exchange and a secondary market for such loans may be less liquid than markets for other more liquid fixed income securities. Consequently, transactions in senior loans may involve greater costs than transactions in more actively traded instruments. Restrictions on transfers in loan agreements, a lack of publicly available information, irregular trading activity and wide bid/ask spreads among other factors, may, in certain circumstances, make senior loans difficult to value accurately or sell at an advantageous time or price than other types of securities or instruments. These factors may result in an Account being unable to realize full value for the senior loans and/or may result in an Account not receiving the proceeds from a sale of a senior loan for an extended period after such sale, each of which could result in losses to the Account. Senior loans may have extended trade settlement periods, which may result in sale proceeds not being immediately available to an Account, which could make it difficult for an Account to make additional investments or meet redemption requests or other cash requirements like margin calls. An Account may seek to satisfy any short-term liquidity needs resulting from an extended trade settlement process by, among other things, selling Account assets, holding additional cash or entering into temporary borrowing arrangements with banks and other potential funding sources. Loan purchasers have no entitlement to receive from loan sellers delayed compensation payments that are intended to incentivize shorter settlement periods. Consequently, there is no certainty that PIMCO will be able to obtain delayed compensation payments in connection with loan transactions. If an issuer of a senior loan prepays or redeems the loan prior to maturity, an Account may have to reinvest the proceeds in instruments that pay lower

interest rates. To the extent that an Account invests in senior loans that are covenant-lite obligations, the Account may have fewer rights against a borrower (e.g., covenant-lite obligations may contain fewer maintenance covenants than other obligations, or no maintenance covenants) and may have a greater risk of loss on such investments as compared to investments in traditional loans. Senior loans in which an Account invests may be collateralized, although the loans may not be fully collateralized, and the collateral may be unavailable or insufficient to meet the obligations of the borrower. An Account may have limited rights to exercise remedies against such collateral or a borrower, and loan agreements may impose certain procedures that delay receipt of the proceeds of collateral or require the Account to act collectively with other creditors to exercise its rights with respect to a senior loan.

Senior loans may not be considered “securities,” and therefore purchasers, such as an Account, may not be entitled to rely on the anti-fraud protections of the federal securities laws. Loans and other debt instruments that are not in the form of securities may therefore offer less legal protection to the Account in the event of fraud or misrepresentation.

In addition, in certain circumstances, PIMCO may restrict itself from receiving material non-public information (“MNPI”) with respect to an issuer of senior loans so as not to restrict its ability to trade in other securities of such issuer, even if such information may be beneficial to the Accounts holding such senior loans. Even when PIMCO restricts itself from receiving MNPI, foregoing a possible opportunity to engage in a private transaction, PIMCO ultimately may not trade in the securities of such issuer.

Servicers and Associated Risks. In addition to risks associated with borrowers and collateral on assets that an Account may originate or acquire or to which it otherwise has exposure, the creditworthiness, servicing practices and viability of the servicers of structured investments are also significant risks. For example, commercial mortgage-backed securities or CDOs may provide that the servicer is required to make advances in

respect of delinquent mortgage loans. However, servicers experiencing financial difficulties may not be able to perform these obligations. Servicers who have sought bankruptcy protection may, due to application of the provisions of bankruptcy law, not be required to advance such amounts. Even if a servicer were able to advance amounts in respect of delinquent mortgage loans, its obligation to make such advances may be limited to the extent that it does not expect to recover such advances due to the deteriorating credit of the delinquent mortgage loans. In addition, a servicer’s obligation to make such advances may be limited to the amount of its servicing fee.

Short Exposure Risk. Short sales and short positions are subject to special risks. A short sale involves the sale by an Account of a security that it does not own with the hope of purchasing the same security at a later date at a lower price. An Account may also enter into a short position through a forward commitment or a short derivative position through a futures contract or swap agreement. If the price of the security or derivative has increased during this time, then the Account will incur a loss equal to the increase in price from the time that the short sale was entered into plus any transaction costs (i.e., premiums and interest) paid to the broker-dealer to borrow securities. Therefore, short sales involve the risk that losses may be exaggerated, potentially losing more money than the actual cost of the investment, especially in the case of leveraged short positions. By contrast, a loss on a long position arises from decreases in the value of the security and is limited by the fact that a security’s value cannot decrease below zero. In times of unusual or adverse market, economic, regulatory, or political conditions, an Account may not be able, fully or partially, to implement its short selling strategy. Periods of unusual or adverse market economic, regulatory, or political conditions generally may exist for extended periods of time. In response to market events, the SEC and regulatory authorities in other jurisdictions may adopt (and in certain cases, have adopted) bans on, and/or reporting requirements for, short sales of certain securities, including short positions on such securities acquired through swaps. Also, there is the risk that the

counterparty to the short position or the broker-dealer will not fulfill its contractual obligations, causing a loss to the Account.

Small-Cap and Mid-Cap Company Risk. Investments in small-capitalization and mid-capitalization companies involve greater risk than investments in large-capitalization companies. The general risks associated with fixed income securities and equity securities are particularly pronounced for securities issued by companies with smaller market capitalizations. These companies may have limited product lines, markets or financial resources or they may depend on a small or inexperienced management group. As a result, they may be subject to greater levels of credit, market, and issuer risk. Securities of smaller companies may trade less frequently and in lesser volumes than more widely held securities and their values may fluctuate more sharply than other securities. They may also have limited liquidity. These securities may therefore be more vulnerable to adverse developments than securities of larger companies, and the Account may have difficulty purchasing or selling securities positions in smaller companies at prevailing market prices. Also, there may be less publicly available information about smaller companies or less market interest in their securities as compared to larger companies. Companies with medium-sized market capitalizations may have risks similar to those of smaller companies.

SPAC Risk. An Account may invest in units of, shares of, warrants to purchase stock of, and other interests in special purpose acquisition companies or similar special purpose entities that pool funds to seek potential acquisition opportunities (collectively, "SPACs"). SPACs and similar entities have no operating history or ongoing business other than seeking to complete a business combination with one or more companies, and as a result, the value of each of their securities is particularly dependent on the ability of the entity's management to identify and complete a successful business combination. Some SPACs may pursue acquisitions only within certain industries or regions, which may increase the volatility of their prices and limit the number of companies they

consider as targets for a potential business combination transaction. An investment in a SPAC is subject to a variety of risks, including, among others, that (i) as a newly formed company with no operating history, there is no basis on which to evaluate the ability to achieve the SPAC's business objective; (ii) an attractive business combination target may not be identified at all and the SPAC may be required to liquidate and return any remaining monies to shareholders; (iii) shareholders may not be afforded an opportunity to vote on the proposed business combination; (iv) a business combination, if effected, may prove unsuccessful and an investment in the SPAC may lose value, including without limitation at the effective time of the business combination; (v) the warrants or other rights with respect to the SPAC held by an Account may expire worthless or may be repurchased or retired by the SPAC at an unfavorable price; (vi) an Account may agree to forfeit its redemption rights or may be delayed in receiving any; (vii) an investment in a SPAC may be diluted in connection with the business combination or by additional financings; (viii) shareholders may lose the principal value of their investment if they do not redeem their investment in the SPAC prior to the effective time of the business combination; (ix) no or only a thinly traded market for shares of or interests in a SPAC may develop, leaving an Account unable to sell its interest in the SPAC or to sell its interest only at a price below what an Account believes is the intrinsic value of its interest in the SPAC; and (x) the values of investments in SPACs may be highly volatile and may depreciate significantly over time. In addition, an Account may invest in the at-risk capital of a SPAC in the form of direct or indirect interests in such SPAC's founder shares and private placement warrants or loans to a SPAC to finance working capital needs. An investment in the at-risk capital of a SPAC is subject to complete loss if the SPAC does not complete a business combination and an Account may be liable for additional obligations of the sponsor entity beyond its initial investment in the at-risk capital. Investments in a SPAC sponsor consist of securities issued on a private placement basis, which are subject to legal and contractual lock-ups and transfer restrictions and are

illiquid. In connection with a business combination, a SPAC sponsor may agree to forfeitures, earn outs, additional lock ups, or other agreements that may have the effect of reducing the value of any such investments.

An Account may also invest in an equity or debt financing, or other financing arrangements, undertaken by a SPAC in connection with the initial business combination. Investors in these financing transactions typically are required to commit capital at the time a proposed business combination is announced, or otherwise provide near-term liquidity to a SPAC, and such investments are subject to significant diminution in value if the trading prices of the publicly traded equity of the SPAC diminishes following closing of the business combination transaction or if the terms of such financing prove to be unfavorable. Any securities issued in such financing transactions likely will be unregistered and may be subject to additional contractual limitations on disposition.

In connection with an investment in the at-risk capital of a SPAC, PIMCO may have the ability to appoint one or more persons to the board of any such SPAC. Any such board member may become aware of material non-public information that could impact PIMCO's ability to trade in the securities of certain issuers. Other Clients and Affiliate Clients may sponsor, or invest in, a SPAC, which may have similar or different interests in such a SPAC, which may result in potential or actual conflicts of interest.

Sovereign Debt Risk. An Account that invests in fixed income instruments issued by sovereign entities may decline in value as a result of default or other adverse credit events resulting from the issuer's inability or unwillingness to make principal or interest payments in a timely fashion. A sovereign entity's failure to make timely payments on its debt can result from many factors, including, without limitation, insufficient foreign currency reserves or an inability to sufficiently manage fluctuations in relative currency valuations, an inability or unwillingness to satisfy the demands of creditors and/or relevant supranational entities regarding debt service or economic reforms, the size of the debt burden relative to

economic output and tax revenues, cash flow difficulties, and other political and social considerations. The risk of loss to an Account in the event of a sovereign debt default or other adverse credit event is heightened by the unlikelihood of any formal recourse or means to enforce its rights as a holder of the sovereign debt. In addition, sovereign debt restructurings, which may be shaped by entities and factors beyond an Account's control, may result in a loss in value of an Account's sovereign debt holdings or affect an Account's ability to dispose of an investment.

From time to time, uncertainty regarding potential increases in the statutory debt ceiling could increase the risk that the U.S. government may default on payments on certain U.S. government securities, cause the credit rating of the U.S. government to be downgraded, increase volatility in the stock and bond markets, result in higher interest rates, reduce prices of U.S. Treasury securities, and/or increase the costs of various kinds of debt.

Speculative Position Limits Risk. PIMCO's ability to invest in certain derivatives may be constrained by applicable regulations pertaining to speculative position limits. Certain regulators and exchanges have rules limiting the positions which any person or group may own, hold or control in certain derivatives. In applying such limits, certain regulators and exchanges require that the adviser aggregate any positions over which it has trading control. In some instances, position limits apply directly to Clients, as beneficial owners of the positions (e.g., CFTC and exchange limits and certain position limits imposed by non-U.S. regulators). In such circumstances, Clients are responsible for ensuring that their accumulated position in the derivative position across all their relevant investments does not exceed the applicable position limit. In addition to other risks involving investments in derivatives, investments in derivatives that have position limits may be subject to regulatory risk associated with exceeding an applicable position limit and could be required to reduce or liquidate positions in order to comply with such limits. Similarly, PIMCO could be required to reduce or liquidate

positions that it manages in order to comply with such limits or may not be able to fully implement a trading strategy, in order to comply with such limits. In such circumstances, such limits may prevent an Account from holding positions that may otherwise be beneficial or profitable. Any such liquidation or limited implementation could result in substantial costs. PIMCO has implemented procedures to reasonably mitigate such risks, should they arise.

Further, as of January 1, 2023, federal speculative position limits apply to swaps on agricultural, energy and metals commodities that are “economically equivalent,” as defined by the CFTC, to certain futures contracts. Uncertainty surrounding which swaps qualify as “economically equivalent” may result in compliance challenges, as well as the modifications or liquidations noted above. An overly broad application of the definition could result in unnecessary restrictions in position sizes, whereas an overly narrow application could risk position limit overages.

Special Servicing of Mortgage Loans. An Account may not control the special servicing of the mortgage loans or other debt underlying the securities in which the Account may invest, and, in such cases, the special servicer may take actions that could adversely affect an Account’s interests. Overall control over the special servicing of the mortgage loans or other debt underlying the securities in which an Account may invest may be held by a directing certificate holder, which is typically appointed by the holders of the most subordinate class of such securities then outstanding. Accounts ordinarily will not have the right to appoint the directing certificate holder. In connection with the servicing of the specially serviced loans, the related special servicer may, at the direction of the directing certificate holder, take actions that could adversely affect an Account’s interests.

Stable Value Risk. Although stable value investments seek to reduce the risk of principal loss, investing in such an option involves risk, including loss of principal. These risks could result in a decline of an Account’s portfolio value or cause a withdrawal or transfer from the portfolio to occur at less than a participant’s invested value. An

investment in a stable value account may be worth more or less than the original cost when redeemed.

Diversification does not ensure against loss. Stable value investment contracts involve several unique risks, which include but are not limited to: a stable value investment contract issuer could default, become insolvent, file for bankruptcy protection, or otherwise be deemed by the plan’s auditor to no longer be financially responsible; an event or condition outside the normal operation of the plan may occur (including but not limited to plan changes, employer bankruptcy, significant layoffs, plant closings, corporate spin-offs, divestitures, or restructurings); some portfolio securities could become impaired or default; or certain communications from the plan or the plan’s agents may cause an investment contract to not pay benefits at contract value; or there could be a change in tax law or accounting rules. Any of these risks, if realized, may cause a write-down in the value of the Account and a risk of loss of all or a part of a participant’s invested value in an Account. Stable value pooled funds in which an Account invests have similar risks and, additionally, the risk that the pooled fund may fail to make a timely payment to the Account or may pay less than the Account’s invested value in the pooled fund.

State-Specific Risk. An Account that concentrates its investments in a particular state’s municipal bonds may be affected significantly by economic, regulatory, or political developments affecting the ability of the state’s issuers to pay interest or repay principal. Any provisions of the state’s constitution and statutes which limit the taxing and spending authority of the state governmental entities may impair the ability of the state’s issuers to pay principal and/or interest on their obligations. Each state’s economy may be sensitive to economic problems affecting particular industries. Future state political and economic developments, constitutional amendments, legislative measures, executive orders, administrative regulations, litigation and voter initiatives could have an adverse effect on the debt obligations of the state’s issuers.

State Law Restrictions on Ownership of Real Property. Certain U.S. states have proposed, enacted, or are in the

process of adopting new legislation (including Senate Bill 264 in the State of Florida) that restricts the ability of a wide range of governmental bodies and persons or entities from or domiciled in foreign countries of concern to directly or indirectly own or acquire interests in “real property” (e.g., land, buildings, fixtures, and all other improvements to land) located in the relevant states, subject to certain limited exceptions (such laws as in effect from time to time, the “State Real Estate Laws”). Certain portfolio investments made by an Account may constitute investments in “real property” for purposes of these laws (such portfolio investments, “Restricted Investments”). In the event that any of an Account’s direct or indirect investors are residents of or domiciled in any foreign country of concern, as defined in the applicable U.S. state’s laws (e.g., the People’s Republic of China) (any such direct or indirect investor, a “Covered Investor”), the Account may be required to restrict the indirect ownership of any Restricted Investments by such Covered Investors.

The State Real Estate Laws may impose different thresholds on the ownership of Restricted Investments by Covered Investors (e.g., such State Real Estate Law may permit ownership of less than 5%), or the rights of such Covered Investors in relation to the relevant Account or Fund (e.g., such State Real Estate Law may permit ownership of non-controlling interests). Accordingly, an Account may (i) seek to limit the direct or indirect ownership of the Account by Covered Investors in order to comply with such laws or (ii) impose restrictions on the Covered Persons management rights or the size of the Restricted Investment the Covered Investor may hold which may result in the Account holding a smaller position in such investments than it otherwise would if it did not have Covered Investors. The impact of the State Real Estate Laws on the Account and its investors may vary on a state-by-state basis, particularly to the extent that a state adopts an exemption from the ownership restrictions for passive investors in commingled funds.

In the event that PIMCO determines to restrict the indirect ownership of Restricted Investments by Covered Investors, PIMCO may determine, in its sole discretion,

whether to do so (i) by excluding Covered Investors from the relevant Restricted Investment(s), (ii) by causing the mandatory withdrawal of such Covered Investors from the Fund, or (iii) by taking other steps to maintain compliance with applicable law and otherwise acting in the best interests of the Account and its investors. Any such determination by PIMCO may increase the pro rata interest of each investor that is not a Covered Investor in that particular Restricted Investment (in the case of an exclusion) or in all future portfolio investments (in the case of a mandatory withdrawal) and may decrease the pro rata interest of each investor that is not a Covered Investor in all portfolio investments that are not Restricted Investments (in the case of an exclusion). In addition, any such determination by PIMCO may increase the pro rata interest of each Covered Investor in all portfolio investments that are not Restricted Investments (in the case of an exclusion).

Given the developing nature of the State Real Estate Laws and, in some cases, uncertainty of any enforcement regime and interpretation of exceptions, it is difficult to predict the full scope of their impact on an Account’s portfolio investments and investor base. It is possible that state legislators and/or regulators may, in the future, issue guidance indicating that the exclusion of a Covered Investor from a particular Restricted Investment is insufficient to comply with the relevant legislation. If this occurs, the Account as a whole may be prohibited from making Restricted Investments on a going-forward basis, or the Account may be required to cause the mandatory withdrawal of all Covered Investors to avoid a violation of the applicable State Real Estate Law. Any of these outcomes could make it difficult for the Account to act successfully on investment opportunities and may adversely affect the Account’s performance as a whole.

The State Real Estate Laws present certain risks and conflicts regarding valuation of Restricted Investments. In certain situations, State Real Estate Laws may permit the indirect ownership of debt interests in Restricted Investments by Covered Investors but require disposal of any equity interest in a Restricted Investment acquired via a foreclosure within a specified period of time. In the

event of a foreclosure by an Account on any Restricted Investment that was originally a debt investment, if required by the applicable State Real Estate Law, PIMCO may seek to exclude Covered Investors from participating in the Restricted Investment before any applicable grace period closes or take other steps to achieve compliance with the applicable State Real Estate Law, however the value of the foreclosed-upon Restricted Investment at such time may be materially lower than its original value, or may be difficult to determine. Similarly, in the event the State Real Estate Laws are amended or repealed, PIMCO may seek to rebalance the portfolio to permit Covered Investors to participate in Restricted Investments from which they were originally excluded at such Restricted Investments' current respective values which could be greater or lesser than the value at the time of acquisition.

Accounts intend to comply with the State Real Estate Laws, and may, to comply with such laws, request and report confidential information about any investor if required by the State Real Estate Laws and, if applicable, any underlying beneficial ownership, to applicable authorities if the Account, PIMCO, and/or the Account's administrator, each in its sole discretion, determines that it is in the best interests of the Account or its affiliates in light of the relevant laws or regulations or upon the request of regulators.

Sub-Adviser Risk. In accordance with the terms of the applicable governing documents for a Separate Account or PIMCO Fund, PIMCO may from time to time utilize other investment advisers, which may or may not be affiliated with PIMCO (collectively, "Sub-Advisers"), for the purpose of participating in particular market opportunities or executing particular strategies that PIMCO believes can be effectively accessed and/or managed by such Sub-Advisers. In general, the methods of analysis and investment strategies undertaken on behalf of a Separate Account or PIMCO Fund will be subject to substantially similar material risks whether performed by PIMCO or a Sub-Adviser. To the extent that PIMCO utilizes Sub-Advisers to effectuate the investment objectives of a Separate Account or PIMCO

Fund, the Sub-Adviser, subject to oversight by PIMCO, would be involved in the day-to-day management of such Separate Account or PIMCO Fund, and such Separate Account or PIMCO Fund will be subject to the possible defaults or misconduct of such Sub-Advisers. Conversely, in some circumstances, regulatory restrictions, conflicts of interest or other considerations may cause PIMCO, in its oversight role, to intervene with respect to a Sub-Adviser's day-to-day management of a Separate Account or PIMCO Fund and require certain alterations to the Sub-Adviser's proposed investment activities with respect to such Separate Account or PIMCO Fund. Although in some cases PIMCO may pay a Sub-Adviser fee from fees that it receives from an Account, in other cases an Account may pay fees directly to the Sub-Adviser as well as to PIMCO.

PIMCO generally has the right to terminate a Sub-Adviser. Therefore, PIMCO may terminate a Sub-Adviser even when a client may not wish it to do so. In addition, in certain cases PIMCO has an economic or other relationship with a Sub-Adviser which may create a disincentive for PIMCO to terminate or recommend the termination of a Sub-Adviser. In addition, PIMCO has agreements with Research Affiliates, LLC ("RA") to develop and offer multiple PIMCO Fund, Separate Account products and/or Wrap Program ("RA Strategies") for which PIMCO serves as investment adviser and RA as sub-adviser, the terms of which may create economic disincentives for PIMCO to terminate or recommend the termination of RA as sub-adviser.

Synthetic Convertible Securities Risk. Synthetic convertible securities involve the combination of separate securities that possess the two principal characteristics of a traditional convertible security (i.e., an income-producing component and a right to acquire an equity security). Synthetic convertible securities are often achieved, in part, through investments in warrants or options to buy common stock (or options on a stock index) and therefore are subject to the risks associated with derivatives. The value of a synthetic convertible security will respond differently to market fluctuations than a traditional convertible security because a synthetic

convertible is composed of two or more separate securities or instruments, each with its own market value. Because the convertible component is typically achieved by investing in warrants or options to buy common stock at a certain exercise price, or options on a stock index, synthetic convertible securities are also subject to the risks associated with derivatives. In addition, if the value of the underlying common stock or the level of the index involved in the convertible component falls below the exercise price of the warrant or option, the warrant or option may lose all value.

Tax Risk. Tax laws and regulations applicable to an Account are subject to change, and unanticipated tax liabilities could be incurred by investors as a result of such changes. Investors should consult their own tax advisors to determine the potential tax-related consequences of investing in a Separate Account, Registered Fund, CIT, or Private Fund. PIMCO is generally not required to consider the tax status or tax needs of an Account when managing investments, although it may choose to do so.

Third-Party Involvement Risk. An Account may hold a portion of its investments through partnerships, joint ventures, securitization vehicles or other entities with third-party investors (collectively, “joint ventures”). Joint venture investments involve various risks, including the risk that the Account will not be able to implement investment decisions or exit strategies because of limitations on the Account’s control under applicable agreements with joint venture partners, the risk that a joint venture partner may be compromised due to internal disputes or problems at the joint venture partner, become bankrupt or may at any time have economic or business interests or goals that are inconsistent with those of the Account, the risk that a suitable replacement joint venture partner may not exist or be able to be engaged if needed, the risk that the activities of a joint venture partner may increase regulatory or legal risk to applicable Account(s) and/or PIMCO, the risk that a joint venture partner may be in a position to take action contrary to the Account’s objectives or fails to perform its obligations in respect of

the joint venture, the risk of liability based upon the actions of a joint venture partner and the risk of disputes or litigation with such partner and the inability to enforce fully all rights (or the incurrence of additional risk in connection with enforcement of rights) one partner may have against the other, including in connection with foreclosure on partner loans because of risks arising under state law. In addition, an Account may be liable for actions of its joint venture partners.

Tracking Error Risk. Certain Accounts seek to track the performance of a specified benchmark or index (an “Underlying Index”). Such an Account’s portfolio may not closely track or align with and may deviate from the Underlying Index for a number of reasons. An Account incurs operating expenses, which are not applicable to the Underlying Index, and the costs of buying and selling securities, especially when rebalancing an Account’s portfolio to reflect changes in the composition of the Underlying Index. Performance of an Account and the Underlying Index may vary due to asset valuation differences and differences between an Account’s portfolio and the Underlying Index due to legal restrictions, cost or liquidity restraints. The risk that performance of an Account and the Underlying Index may be heightened during periods of increased market volatility or other unusual market conditions. In addition, an Account’s use of a representative sampling approach may cause the account to be less correlated to the return of the Underlying Index than if the account held all the securities in the Underlying Index.

Trade Claims Risk. Trade claims are purchased from creditors of companies in financial difficulty and often involved in bankruptcy proceedings, or from various third parties, including suppliers of goods or services, landlords and judgment creditors. For purchasers such as an Account, trade claims offer the potential for profits since they are often purchased at a significant discount from face value and, consequently, may generate capital appreciation in the event that the market value of the claim increases as the debtor’s financial position improves or the claim is paid. An investment in trade claims is very speculative and carries a high degree of

risk. Trade claims are illiquid instruments which generally do not pay interest and there can be no guarantee that the debtor will ever be able to satisfy the obligation on the trade claim. Additionally, there can be restrictions on the purchase, sale, and/or transferability of trade claims during all or part of a bankruptcy proceeding. The markets in trade claims are not regulated by federal securities laws or the SEC. The purchase and sale of trade claims are generally consummated by written contract between the parties and contain customary language regarding the return of a portion of the purchase price in the event that all or a portion of the claim is disallowed or rejected. Because trade claims are unsecured, holders of trade claims may have a lower priority in terms of payment than certain other creditors in a bankruptcy proceeding. Further, the validity of trade claims may be challenged by a debtor or by other creditors and, if such challenge is successful, rejected in whole or in part, which would require the sellers to return the purchase price consideration, which may or may not have been paid by the seller.

Turnover/Frequent Trading Risk. A change in the securities held by an Account is known as “portfolio turnover.” Higher portfolio turnover is a result of frequent trading and involves correspondingly greater expenses to an Account, including brokerage commissions or dealer mark-ups and other transaction costs on the sale of securities and reinvestments in other securities. Such sales may also represent tax risk. The trading costs and tax risk associated with portfolio turnover may adversely affect an Account’s performance. The use of futures or other forward settling derivatives may result in the appearance of higher portfolio turnover as positions are “rolled forward” in order to maintain a specific exposure. Accordingly, portfolio turnover rates may vary based on how such rates are calculated.

United Kingdom’s Exit from European Union. An Account may face potential risks associated with the UK’s withdrawal from the EU, which took place on January 31, 2020. The UK and the EU have agreed to a Trade and Cooperation Agreement which sets out the agreement for certain parts of the future relationship between the

EU and the UK from January 1, 2021. The Trade and Cooperation Agreement does not provide the UK with the same level of rights or access to all goods and services in the EU as the UK previously maintained as a member of the EU and during the transition period. In particular the Trade and Cooperation Agreement does not include an agreement on financial services, which is yet to be agreed and is unlikely to be concluded. Accordingly, uncertainty remains in certain areas as to the future relationship between the UK and the EU. The UK’s withdrawal from the EU may result in volatility in the UK, the EU and other financial and foreign exchange markets in the short and long term, including a sustained weakness in the British pound’s exchange rate against the U.S. dollar, the euro and other currencies. Further, the withdrawal of the UK from the EU may also destabilize some or all of the remaining 27 members of the EU (some of which are countries in which PIMCO conducts business) and/or the Eurozone, leading to, among other things, fluctuations in asset values, fluctuations in exchange rates, increased illiquidity of investments located, traded or listed within the UK, the EU or elsewhere, changes in the willingness or ability of financial and other counterparties to enter into transactions, or the price and terms on which they are prepared to transact; and/or changes in legal and regulatory regimes to which an Account, PIMCO, its affiliates and/or certain of an Account’s assets are or become subject. Any one of these developments may have a material adverse effect on an Account. For example, there may be detrimental implications for the value of certain of the Account’s investments, its ability to enter into transactions, to value or realize certain of its investments or otherwise to implement its investment policy.

The withdrawal and related process may impact an Account’s appetite and/or approach to investing in assets located within the UK and the EU. The UK’s future relationship with the EU is still not clear, and the shape of the future regulatory landscape is not yet defined. It will ultimately depend on how the UK renegotiates the regulation of the provision of financial services within and to persons in the European Union. The legal, political

and economic uncertainty generally resulting from the UK exit from the EU may adversely impact both EU and UK-based businesses. This uncertainty may also result in an economic slowdown and/or a deteriorating business environment in the UK and in one or more other EU member states.

Furthermore, the exit of the UK from the EU could have a material impact on the UK's economy and the future growth of that economy, impacting adversely an Account's investments in the UK. It could also result in prolonged uncertainty regarding aspects of the UK's economy and damage customers' and investors' confidence. Any of these events, as well as an exit or expulsion of a member state other than the UK from the EU, could have a material adverse effect on an Account.

Unsecured Debt Risks. Accounts may invest in unsecured debt instruments that are not secured by collateral. In the event of default on an unsecured debt instrument, the first priority lien holder has first claim to the underlying collateral of the debt instrument. It is possible that no collateral value would remain for an unsecured holder and therefore result in a complete or partial loss. Because unsecured debt instruments are lower in priority of payment to secured debt instruments, they are subject to the additional risk that the cash flow of the borrower may be insufficient to meet scheduled payments after giving effect to the secured obligations of the borrower. Unsecured debt instruments generally have greater price volatility than secured debt instruments and may be less liquid.

Unsecured Obligations. Accounts may acquire direct or indirect interests in unsecured obligations, which may be subordinated to other obligations of the obligor and generally have greater credit, insolvency and liquidity risk than is typically associated with investment grade obligations and secured obligations. Unsecured obligations generally have lower rates of recovery than secured obligations following a default. Also, in the event of the insolvency of an obligor of any unsecured obligation, the holders of such unsecured obligation will be considered general, unsecured creditors of the obligor, will have fewer rights than secured creditors of

the obligor and will be subordinate to the secured creditors with respect to the related collateral.

Uninsured Losses Risk. Properties owned by an Account or underlying the Account's investments may be covered by comprehensive liability, fire, flood (where appropriate), rental loss and extended insurance coverage. There are, however, types of losses (such as from hurricanes, floods, wars, terrorist attacks, forest fires or earthquakes or other natural or man-made disasters or casualty events) which may be uninsurable, the cost of insuring against these losses may not be economically justifiable, or in some cases, any insurance (even if obtained) may be insufficient to compensate an Account in the event of such a loss. In the event of a catastrophic loss or natural disaster or other casualty to a property, an Account's insurance coverage may not be sufficient to cover the full current market value or replacement cost of its lost investment. In addition, inflation, changes in building codes and ordinances, environmental considerations, provisions in loan documents encumbering the portfolio properties pledged as collateral for loans, and other factors may also make it economically impractical to use insurance proceeds to replace improvements on a property if it is damaged or destroyed. Damage to property underlying an Account's investment resulting from such losses could have a material adverse effect on an Account's investments. If an uninsured loss occurs or a loss exceeds policy limits, an Account could lose both its invested capital and anticipated revenues from the affected properties, thereby reducing an Account's returns (if any). In addition, if an Account invests in mortgage loans secured by, or other investments that derive their value from, real property, the occurrence of a natural disaster could impair the value of the collateral and thereby negatively affect the financial condition and results of an Account.

In general, losses related to terrorism are becoming harder and more expensive to insure against. Most insurers are excluding terrorism coverage from their all-risk policies. In some cases, the insurers are offering significantly limited coverage against terrorist acts for

additional premiums, which can greatly increase the total costs of casualty insurance for a property. As a result, it is likely that not all of an Account's investments in properties will be insured against damages attributable to acts of terrorism. Further, an Account or its tenants may not maintain adequate insurance coverage against liability for personal injury and property damage in the event of accidents or other casualty events in connection with such properties. Any future disasters may also adversely affect the liquidity of both affected and unaffected assets.

Valuation Risk. The process of valuing securities for which reliable market quotations are not available is based on inherent uncertainties, and the resulting values may differ from values that would have been determined had readily available market quotations been available for such securities. As a result, the values placed on such securities by PIMCO or a PIMCO Fund may differ from values placed on such securities by other investors or a Client's custodian and from prices at which such securities may ultimately be sold. Where appropriate, third-party pricing information, which may be indicative of, or used as an input in determining, fair value may be used, but such information may at times not be available regarding certain assets or, if available, may not be considered reliable. Even if considered reliable, such third-party information might not ultimately reflect the price obtained for that security in a market transaction, which could be higher or lower than the third-party pricing information. Disruptions in the credit markets have from time to time resulted in a severe lack of liquidity for many securities or other financial instruments or assets, making them more difficult to value and, in many cases, putting significant downward pressure on prices. This risk will be enhanced for Accounts (in particular, certain Private Funds) in respect of which market quotations are not expected to be obtainable for many of the Account's assets. In addition, an Account may rely on various third-party sources to calculate its market value. As a result, the Account is subject to certain operational risks associated with reliance on Service Providers and Service Providers' data sources. In addition, the values placed on securities will

affect the value of the applicable Accounts, any fees determined based on the Account value, and the performance of the Account. This may result in potential conflicts of interest where PIMCO is exercising discretion regarding the fair valuation process. PIMCO will seek to take appropriate measures to mitigate any such conflicts of interest.

Value Investing Risk. Value investing attempts to identify companies that are believed to be undervalued. Value investments typically have prices that are low relative to factors such as the company's earnings, cash flow or dividends. A value investment may decrease in price or may not increase in price as anticipated by PIMCO, or the Sub-Adviser, as applicable, if it continues to be undervalued by the market or the factors that the portfolio manager believes will cause the investment's price to increase do not occur. A value investing style may perform better or worse than equity portfolios that focus on growth investments or that have a broader investment mandate.

ITEM 9. Disciplinary Information

On December 1, 2016, PIMCO entered into a settlement agreement with the SEC relating to disclosures in connection with the PIMCO Active Bond Exchange-Traded Fund's (BOND) performance attribution during the first four months of its existence in 2012 and the valuation of 43 smaller-sized ("odd-lot") positions of non-agency mortgage-backed securities using third-party vendor prices, as well as PIMCO's compliance policies and procedures related to these matters. Under the terms of the settlement, PIMCO agreed to pay to the SEC \$19.8 million, which includes a penalty, fee disgorgement, and interest. PIMCO has enhanced its pricing and disclosure policies to address the SEC's findings and, as part of the settlement, retained an independent compliance consultant to review its policies regarding the valuation of smaller-sized positions.

On June 16, 2023, PIMCO entered into a settlement agreement with the SEC relating to certain disclosures in the 2014 and 2015 annual shareholder reports of PIMCO Global StocksPLUS & Income Fund ("PGP") regarding

PGP's use of paired interest rate swaps in its portfolio. Under the terms of the settlement, PIMCO agreed to pay to the SEC a civil monetary penalty in the amount of \$6.5 million. Prior to the SEC's investigation, PIMCO had updated the disclosures in PGP's 2016 annual shareholder report.

On June 16, 2023, PIMCO entered into a settlement agreement with the SEC relating to an error in the fee waiver calculation used by PIMCO's third-party vendor that caused certain advisory fees to be under-waived from April 2011 to November 2017 and charged to PIMCO All Asset All Authority Fund ("A4"). Under the terms of the settlement, PIMCO agreed to pay to the SEC a civil monetary penalty in the amount of \$2.5 million. Prior to the SEC's investigation, PIMCO had identified the error, publicly disclosed the issue and implemented a plan that reimbursed A4 and its shareholders for any losses associated with the fee waiver miscalculation. In addition, PIMCO has enhanced its policies and procedures relating to its oversight of the third-party vendor's advisory fee calculations.

PIMCO and its management persons have no other reportable disciplinary history.

ITEM 10. Other Financial Industry Activities And Affiliations

Registration of Management Persons as Registered Representatives of a Broker-Dealer

Certain of PIMCO's management persons are registered, or have an application pending to register, as representatives of PIMCO's affiliated, registered broker-dealer, PIMCO Investments LLC ("PI"). PI is registered with the SEC and is a member of the Financial Industry Regulatory Authority, Inc. ("FINRA").

Registration as Commodity Pool Operator and Commodity Trading Advisor

PIMCO is registered with the CFTC as a commodity pool operator and commodity trading advisor, and in certain circumstances qualifies as an exempt commodity pool operator. Certain of PIMCO's personnel are listed as

principals and/or as associated persons of PIMCO with the CFTC.

Wholly-Owned Subsidiary Advisor Affiliations

On October 1, 2020, PIMCO and Allianz completed the transition of the oversight of PIMCO Prime Real Estate GmbH ("PPRE GmbH") to an affiliate of PIMCO.

PPRE GmbH operates separately from PIMCO. For additional information relating to PPRE GmbH, please see "Potential Conflicts Relating to Advisory Activities" under Item 11.

Other Affiliations

PIMCO Aurora serves as a Service Provider for certain Accounts, their related investing vehicles, portfolio investments, securitizations, and/or other entities in which the Account invests and/or in respect of transactions in which the Account or such entities participate. Currently, all personnel of PIMCO Aurora are employees of PIMCO or an indirect subsidiary thereof and these individuals will provide services on behalf of both the entity that employs them and PIMCO Aurora. In the future, some individuals may be employed by and provide services exclusively on behalf of PIMCO Aurora, while others will continue to be Dual Service Providers of PIMCO Aurora and PIMCO, or an affiliate thereof. For additional information relating to PIMCO Aurora, please see "Payments Made to Service Providers and Other Third Parties" under Item 5.

Affiliations and Conflicts of Interest

We are committed to providing Clients with service of the highest quality and we are guided by the principle that we act in the best interests of our Clients. Nevertheless, there are circumstances where Client interests' conflict with PIMCO's interests, the interests of our affiliates, the interests of other Clients, or the interests of Affiliate Clients. Some of these conflicts of interest are inherent to our business. We have adopted policies and procedures that are reasonably designed to address conflicts of interest.

We are majority owned by Allianz, a global financial services company, and have various wholly-owned

subsidiaries and other controlled affiliates engaged in investment advisory and related businesses. Accordingly, we are affiliated with various U.S. and non-U.S. investment advisers, broker-dealers and pooled investment vehicles, among other financial entities. For additional information regarding our affiliates, please refer to Appendix C. From time to time PIMCO engages in business activities with some or all of these companies, subject to our policies and procedures governing how we handle conflicts of interest. We also engage our affiliates to provide other services to our Clients in accordance with applicable law. Similarly, our affiliates may lend money to or engage in investment transactions with our Clients, subject to applicable law. Additionally, PIMCO may participate in an affiliated securitization or financing opportunity to the fullest extent (i.e., 100%), without any third-party participation.

PIMCO and its affiliates advise a number of Clients and Affiliate Clients, respectively, which include other affiliates. PIMCO and its affiliates may advise some Clients or Affiliate Clients or take actions for such Clients that differ from recommendations or actions taken for other Clients or Affiliate Clients. PIMCO and its affiliates are not obligated to recommend to any or all Clients or Affiliate Clients any investments that it recommends to, or purchases or sells for, certain other Clients or Affiliate Clients. PIMCO's employees regularly share among each other information, perceptions, advice and recommendations about market trends, the valuations and credit ratings of individual securities and investment strategies, except where restricted by applicable controls related to information sharing established by PIMCO or by applicable law or regulation. In addition, PIMCO shares with or receives similar information from certain of its affiliates, including PIMCO Prime Real Estate LLC ("PPRE LLC"), and in certain situations, PPRE GmbH, subject to applicable controls, law, and/or regulation. Persons associated with PIMCO, or its affiliates have investments in securities, pooled investment vehicles, or other assets, including real estate, that are recommended to Clients or Affiliated Clients or held in Accounts, subject to compliance with our policies regarding personal investments. Additional information regarding potential

conflicts of interest arising from our relationships and activities with our affiliates is provided under Item 11, "Code of Ethics, Participation or Interest in Client Transactions and Personal Trading."

Broker-Dealers. PI is a broker-dealer that serves as the distributor and principal underwriter of the PIMCO Funds, PIMCO Variable Insurance Trust, PIMCO Equity Series, PIMCO Equity Series VIT, PIMCO ETF Trust, PIMCO Managed Accounts Trust, and PIMCO interval funds. PI also provides services such as marketing support for initial offerings of PIMCO-managed closed-end mutual funds and shareholder servicing thereafter, performs marketing and shareholder services with respect to certain offshore funds (such as PIMCO Funds: Global Investor Series plc), acts as placement agent for certain Private Funds and certain Affiliate Clients, may, for a fee or without a fee, participate in the private placement of co-investment vehicles and in investments that may be purchased by or sold by Accounts, and as sub-placement agent for certain access funds managed by third-party investment advisers ("Access Funds") which Access Funds invest substantially all of their assets in PIMCO Private Funds or Registered Funds, and provides marketing services with respect to the CITs. PI also acts as solicitor for certain Client Accounts (including the Wrap Programs).

PIMCO employees who are involved in marketing or soliciting these products are also licensed, registered representatives of PI. These employees, in appropriate circumstances and consistent with Clients' objectives, recommend to investment management Clients or prospective clients the purchase of shares in PIMCO Funds or other PIMCO-managed investment companies or pooled investment vehicles that PI distributes or underwrites or PIMCO advisory services.

With the exception of the Access Funds, these investment companies or pooled investment vehicles typically pay investment management and supervisory and administrative fees to PIMCO, and certain share classes pay distribution and/or service fees to PI, including 12b-1 fees, sales loads, and/or contingent deferred sales charges. In addition to these fees and charges, PIMCO

pays, from its own profits, a fee to PI for marketing and related services that PI provides to certain PIMCO Registered Funds. Certain of PI's registered representatives are employees of PI, in which case such PI employees are supervised persons of PIMCO.

Certain PI employees receive commissions or other compensation for the sale of certain products, such as certain PIMCO-managed open-end funds, closed-end funds (including interval funds), exchange traded funds, separately managed accounts, and private funds. The compensation may be paid at different levels for different products, and takes a number of variables into account, which may provide an incentive to PI employees to promote, recommend or solicit the sale of a particular product over another. Pursuant to policy, no PI employee is permitted to promote, recommend or solicit the sale of one product over another solely because that product will provide higher revenue or compensation to the employee, PI or PIMCO.

Certain affiliates of PIMCO (in particular, PI) act as broker-dealers and may manage or otherwise participate in underwriting syndicates and/or selling groups with respect to portfolio investments, including in connection with mergers, acquisitions, and restructurings, the structuring and offering of asset backed securities and other securitizations, or otherwise be involved in the private placement of debt or equity securities or instruments issued by portfolio investments. Similarly, these affiliates may arrange or provide financing for such investments alone or with other lenders, which could include Accounts managed by PIMCO or its affiliates. Affiliated broker-dealers may also source, structure or otherwise originate investment opportunities for Accounts and receive compensation (from the Account, the issuer or otherwise) in connection with such activities. Affiliated broker-dealers could, as a consequence of such activities, hold positions in instruments and securities issued by portfolio investments and engage in transactions that could be appropriate investments for an Account. In addition, it is possible that through these activities PIMCO and/or its affiliates will come into the possession of information that limits an Account's ability

to engage in potential transactions. Subject to applicable law, affiliated broker-dealers engaging in such activities will generally receive underwriting fees, placement commissions, financing fees, interest payments or other compensation with respect to such activities, which are not required to be shared with an Account, and which will not reduce or otherwise offset other fees paid or otherwise borne by an Account. Where an affiliated broker-dealer serves as underwriter with respect to an investment's securities, an Account will generally be subject to a "lock-up" period following the offering under applicable regulations or agreements during which time its ability to sell any securities that it continues to hold is restricted. This could prejudice an Account's ability to dispose of such securities at an opportune time.

In addition, in circumstances where a portfolio investment becomes distressed and the participants in an offering undertaken by such investment have a valid claim against the underwriter, an Account would have a conflict in determining whether to sue an affiliated broker-dealer. In circumstances where an unaffiliated broker-dealer has underwritten an offering, the issuer of which becomes distressed, an Account will also have a conflict in determining whether to bring a claim on the basis of concerns regarding PIMCO and/or its affiliates' relationship with the broker-dealer.

PIMCO's relationship with affiliated broker-dealers gives rise to conflicts of interest between it and Funds and Accounts managed by PIMCO or its affiliates. In general, PIMCO and its affiliates have an incentive to cause an Account to retain or otherwise transact with affiliated broker-dealers instead of unaffiliated broker-dealers or other counterparties. PIMCO and its affiliates could also have an incentive to structure certain investment transactions so that the transactions require the use of an affiliated broker-dealer. In addition, an affiliated broker-dealer could cause investors that are strategically important to PIMCO or its affiliates to receive an allocation ahead of others. Furthermore, affiliated broker-dealers may also provide services, including those described above, to third parties, including competitors of PIMCO, an Account, one or more of its investments, or

their affiliates. This may create additional conflicts of interest, including where such affiliated broker-dealer is acting as a placement agent or underwriter of third-party securities that could otherwise be acquired by an Account.

Other Investment Advisers or Financial Planners. In rendering investment management services to Clients, including U.S. registered investment companies, PIMCO uses the resources of the investment adviser affiliates listed in Appendix C (the “Investment Adviser Affiliates”) and the Non-U.S. Advisers to provide portfolio management, research, and trading services. Client fees are allocated between PIMCO and/or the Investment Adviser Affiliate and the Non-U.S. Adviser based on a number of factors, including but not limited to relevant U.S. and foreign tax laws and the types of services provided in the relevant jurisdiction. Under Memoranda of Understanding (“MOUs”) between PIMCO and the Non-U.S. Advisers, each of the Non-U.S. Advisers are Participating Affiliates of PIMCO as that term is used in relief granted by the staff of the SEC allowing U.S. registered advisers to use investment management and trading resources of unregistered advisory affiliates subject to the regulatory supervision of the registered adviser.

Each Participating Affiliate and any of their respective employees who provide services to clients of PIMCO are considered under the MOUs to be “associated persons” of PIMCO as that term is defined in the Advisers Act for purposes of PIMCO’s required supervision. The Participating Affiliates have agreed to submit to the jurisdiction of the SEC and to the jurisdiction of the U.S. courts for actions arising under the U.S. securities laws in connection with the investment management services they provide for any PIMCO Clients. To the extent an associated person of a Participating Affiliate has discretionary authority over the assets of a Client contracted with PIMCO, the Client will receive a brochure supplement for such associated person. The names and biographical information for other employees of the Participating Affiliates who provide services to Clients under an MOU is available upon request.

PIMCO also acts as a sub-adviser for certain open-end registered investment companies sponsored by third parties. In addition, PIMCO and/or certain of the Investment Adviser Affiliates act as sub-adviser to accounts advised by the Non-U.S. Advisers. Certain of the Non-U.S. Advisers also provide administrative services in relation to Accounts advised by PIMCO and/or the Investment Adviser Affiliates.

Management of Affiliated Assets. PIMCO manages assets for Allianz and other direct and indirect equity holders in Allianz Asset Management of America LLC and other Allianz affiliates. The amounts of such assets managed by PIMCO may from time to time be material to PIMCO’s investment management business and may present potential conflicts of interest relating to PIMCO’s activities involving its affiliates, the allocation of PIMCO’s personnel or other resources among Clients, trade allocations and other matters. Please see Item 11, “Code of Ethics, Participation or Interest in Client Transactions and Personal Trading,” for additional information.

Other Activities and Relationships. Certain employees or consultants of PIMCO and its affiliates serve on (or as an advisor or observer to) the boards of directors of portfolio companies of investment management Clients and other employees may serve on such boards in the future. In addition, certain PIMCO employees may serve on the advisory boards of investment management clients and other institutions. Serving in such capacities may give rise to conflicts to the extent that an employee’s fiduciary duties to a portfolio company as a director may conflict with the interests of an investment management Client or the employee’s duties to such other institution and may increase the risk that the relevant Clients will be subject to control person liabilities. Any such conflicts will be handled on a case-by-case basis. In addition, Accounts or investments held in those Accounts may be required to indemnify PIMCO employees for liability associated with serving as a director.

Many PIMCO Fund and other Account offering or governing documents provide for the indemnification or limitation of liability of PIMCO and its affiliates or

employees against losses relating to PIMCO's provision of advisory or other services. Such indemnification provisions may result in investors in such Accounts having a more limited right of action in certain cases than they would in the absence of such standards. As a result, the application of these provisions may result in such Account bearing significant financial losses even where such losses were caused by the negligence (even if heightened) of such covered PIMCO employees.

ITEM 11. Code Of Ethics, Participation Or Interest In Client Transactions and Personal Trading

Code of Ethics

We have implemented policies and procedures relating to, among other things, portfolio management and trading practices, personal investment transactions and insider trading that are designed to prevent or address conflicts of interest. Our policies and procedures, including the PIMCO Code of Ethics (the "Code"), apply to all PIMCO supervised persons and are intended to help appropriately mitigate conflicts of interest with respect to Clients if they occur. The Code is available to any Client or prospective client upon request. In addition, PPRE LLC has implemented policies and procedures that apply to all PPRE LLC employees and are designed to prevent or address the conflicts of interest specific to PPRE LLC's real estate business.

The Code sets out standards of conduct and is reasonably designed to help us detect and prevent or address potential conflicts of interest. The Code covers personal investment transactions of all supervised persons and their immediate family members, which includes most persons sharing the same household as the employee. Although the Code permits supervised persons to trade in securities for their own accounts, the Code contains preclearance procedures, reporting requirements and other provisions that restrict trading by supervised persons. Supervised persons are required to disclose their personal securities accounts upon commencing employment at PIMCO and must submit duplicate securities account statements and confirmations. We also conduct an active monitoring

program of personal trading. Supervised persons must agree to use a broker-dealer that has been approved by our Compliance Department and must grant our Compliance Department access to personal securities account information. The Code also contains disclosure and preclearance procedures with respect to certain personal real estate investments to the extent supervised persons focus on real estate investing on behalf of Clients, and disclosure, preclearance, and other procedures with respect to digital asset investments to the extent supervised persons focus on or have access to certain information regarding digital asset investing on behalf of Clients.

Blackout Periods. Certain supervised persons who are involved in executing Client transactions or who are involved in researching or recommending securities are subject to more restrictive trading prohibitions when such supervised persons or the firm is also trading in the security for Clients.

Violations of the Code of Ethics. Any supervised person who violates the Code may be subject to remedial actions including, but not limited to, profit disgorgement, a percentage reduction in discretionary performance compensation that would otherwise be awarded, censure, demotion, suspension or dismissal. Supervised persons are also required to promptly report any violation of the Code of which they become aware and complete a certification regarding their compliance with the Code at least annually.

Gifts and Entertainment

Our Policy on Gifts, Entertainment and Related Anti-Corruption Measures limits the giving and receiving of certain meals, gifts and entertainment by our employees. Our personnel occasionally receive, participate in or provide entertainment for legitimate business purposes, subject to applicable law and limitations set forth in our policies.

Political and Charitable Contributions

PIMCO's policies prohibit PIMCO from directly or indirectly making, soliciting or coordinating any political or charitable contributions for the purpose of obtaining

or retaining potential or existing public clients or their personnel. Employees are permitted to make personal political or charitable contributions in accordance with applicable law and PIMCO's policies. Employees are required to obtain pre-approval before they (or their immediate family members) make, solicit, or coordinate any contributions to a political candidate, government official, political party or political action committee.

Potential Conflicts Relating to Advisory Activities

PIMCO is a leading global investment management firm that offers a wide variety of products and services to a diverse global client base. In addition, PIMCO is affiliated with Allianz. Accordingly, there are numerous conflicts of interest that may arise in connection with PIMCO's and its affiliates' advisory and other activities, including, but not limited to, those identified below.

The results of our investment activities for a Client may differ significantly from the results achieved by us for other Clients, or by our affiliates for Affiliate Clients. We will manage the assets of a Client in accordance with the investment mandate and investment guidelines selected by such Client.

However, we may give advice, and take action, with respect to a Client that may compete or conflict with the advice we may give to, or an investment action we may take on behalf of, other Clients or with the advice our affiliates may give to or take on behalf of Affiliate Clients. For example, we may buy or sell positions for one Client while we or our affiliates are undertaking for another Client or Affiliate Client the same or a different, including potentially opposite, strategy or position. In addition, to the extent permitted by applicable law, Clients may engage in investment transactions that may result in other Clients or Affiliate Clients being relieved of obligations, or that may cause other Clients or Affiliate Clients to divest certain investments. The purchase, holding, and sale of investments by Clients may enhance or reduce the profitability or increase or decrease the value of other Clients' or Affiliate Clients' investments. Similarly, our management of Client assets may benefit us or our affiliates. For example, and as discussed further herein, Clients may, to the extent permitted by applicable

law, invest directly or indirectly in the securities of companies in which PIMCO or an affiliate or other employees, for itself or its clients, has an equity, debt, or other interest. In addition, because certain Clients are affiliates of PIMCO (including Allianz) or have investors who are affiliates or employees of PIMCO, we will have incentives to resolve conflicts of interest in favor of these Clients over other Clients. In addition, PIMCO manages strategies on behalf of its Clients that are similar to the strategies managed by our affiliates on behalf of Affiliate Clients, which gives rise to certain other potential conflicts of interest, as discussed in more detail below. We have established a Conflicts Committee and related policies and procedures that seek to identify, manage and/or mitigate such potential conflicts of interest, although they may not be successful in doing so.

Overview of Trade Aggregation Process. PIMCO typically aggregates Client orders where appropriate in an effort to obtain more favorable execution, to the extent permitted by internal policies and procedures, Client investment management agreements, and applicable law.

From time to time, order aggregation may not be possible because a security or other instrument is thinly traded or otherwise not able to be aggregated and allocated among all Clients and Affiliate Clients eligible for and seeking the investment opportunity; therefore, Clients and Affiliated Clients may be limited in, or precluded from, participating in an aggregated trade. Also, an issuer in which Clients or Affiliated Clients wish to invest may have threshold limitations on aggregate ownership interests arising from legal or regulatory requirements or company ownership restrictions (e.g., poison pills or other restrictions in organizational documents), which may have the effect of limiting the potential size of the investment opportunity and thus the ability of Clients to participate in the opportunity.

Fixed Income. Subject to our policies and procedures, PIMCO will, in appropriate circumstances, aggregate fixed income trades for a Client with trades in the same security for other Clients. Please refer to Item 12, "Overview of Trade Allocation Process" below for a discussion of PIMCO's trade

allocation policies and procedures and potential conflicts associated with such activities.

Equity. Subject to our policies and procedures, we may also, in appropriate circumstances, aggregate equity trades for a Client with trades in the same security for other Clients. If there are multiple orders in the same security placed at or around the same time and on the same terms, the orders will generally be aggregated if it is determined that aggregation is consistent with our duty of best execution. When transactions are aggregated and it is not possible, due to prevailing trading activity or otherwise, to receive the same price or execution on the entire volume of securities purchased or sold (or if an aggregated order is filled in parts on a given day), the participating Accounts will generally receive the weighted average execution price and will generally bear commissions, fees and charges on a pro rata basis.

Trading for quantitative strategies is generally not aggregated with other PIMCO strategies because these transactions are executed systematically in accordance with the particular strategy's quantitative investment model through the use of Systems, including, in many cases, without human intervention. Accordingly, PIMCO may execute transactions in the same investments at or around the same time on behalf of Clients with a quantitative strategy and Clients with other PIMCO strategies. In such instances, PIMCO Clients may not achieve the same level of execution, and transactions executed on behalf of quantitative strategies may adversely affect the execution of transactions on behalf of non-quantitative strategies and vice versa. Further, to the extent trading for quantitative strategies is not aggregated with other PIMCO strategies, non-quantitative strategies will not be able to participate in or receive allocations of certain investment opportunities, and vice versa; however, allocation of investment opportunities will otherwise be consistent with PIMCO's trade allocation policy as described further below. Because of the use of these Systems by some Accounts and not others, or for other reasons, Accounts may compete with one another for investment opportunities,

which may decrease Account returns. Certain Accounts engaged in non-quantitative strategies may also use similar Systems; in these cases, trading will generally not be aggregated with other Accounts, even if those other Accounts utilize a similar investment strategy. Such trading may not achieve the same level of execution – both more and less favorable – as trades that are aggregated with other PIMCO Clients.

Overview of Trade Allocation Process. The objective of PIMCO's trade allocation policy is to allocate investment opportunities across Accounts in a manner that is fair and equitable over time. PIMCO's procedures are designed to ensure that trade allocations are timely, that no set of trade allocations is accomplished to unfairly advantage one Client over another and that over time PIMCO's Accounts are treated equitably, even though a specific trade or series of trades might have the effect of benefiting one Account over another when viewed in isolation.

Each portfolio manager allocates trades among his or her eligible Accounts. PIMCO's trade allocation policy does not mandate a single method for allocation of investments to Accounts. In allocating trades, portfolio managers seek to allocate orders across Accounts with similar investment guidelines and objectives fairly and equitably over time, taking into consideration relevant factors, including without limitation: the nature of the security or instrument and associated risk characteristics, applicable Account investment restrictions and guidelines, including regulatory restrictions, and other Client instructions; risk tolerances; amounts of available cash; the need to rebalance an Account's portfolio (e.g., due to investor contributions and redemptions); whether the allocation would result in an Account receiving a trivial amount or an amount below the established minimum quantity; regulatory requirements; the origin of the investment; the bases for an issuer's allocation to PIMCO; the availability of certain trading platforms for an Account; and other Account-specific factors. In the event that an allocation decision is not approved in time to meet internal or external timelines, including, but not limited to, delays in confirming that a particular

investment is acceptable under an Account's guidelines, PIMCO will allocate to another Account or Accounts, pending resolution of the issue, but may reallocate to the original intended allocation if the issue is resolved with sufficient time prior to settlement. In these circumstances, if PIMCO is not able to resolve the issue in a timely manner prior to settlement, an affected Account will not receive an allocation, and the Account may be adversely impacted. On a regular basis, portfolio managers review all Accounts to identify any whose current risk exposures and/or portfolio characteristics deviate from targets, as described further below.

Fixed Income. Fixed income investments present certain allocation considerations because of the variety of fixed income securities, including securities that offer similar attributes and exposures. PIMCO's fixed income portfolios are managed to target ranges for portfolio risk exposures and performance characteristics, which will typically be similar for Accounts with similar investment guidelines and objectives, but because of the features of fixed income securities, and other factors including Account specific factors, the specific fixed income securities in the Accounts often differ. Portfolio managers are responsible for allocating among their Accounts with the general purpose of maintaining consistent concentrations across similar Accounts and achieving, as nearly as possible, portfolio characteristic parity among such Accounts, and subject to the additional factors described above. Although Accounts with similar investment guidelines and objectives generally share common target ranges for risk exposures and performance characteristics, differences in actual risk exposures and performance characteristics may occur for a variety of reasons, including, without limitation, subsequent valuation differences in securities that, at the time of acquisition, had similar risk exposures and portfolio characteristics, the timing of purchases needed to construct portfolios for new Accounts, Account rebalancing due to contributions or withdrawals and/or excess cash in existing accounts, Account sensitivities, preferences, guidelines or restrictions that require variation from target ranges, or measurement benchmarks unique to some Accounts.

When an Account varies from a relevant risk exposure or performance characteristic target and such variance is not expected based on factors relevant to the Account, a goal of portfolio management, upon identifying any such variance, is generally to manage that Account toward portfolio characteristic parity with targets. When executing a transaction, whether for the purpose of aligning an Account or group of Accounts within a prescribed risk target range or in connection with an opportunistic transaction, portfolio managers may identify a particular risk characteristic or "common target" for participating Accounts to achieve within the relevant risk target range. In such circumstances, the portfolio managers will instruct that the transaction be allocated among Accounts with similar investment guidelines and objectives to align, as nearly as possible, each Account to the relevant risk target range. Accordingly, the Accounts that may be farthest from parity, as compared to other participating Accounts, for the relevant target range may receive priority in such allocation.

As part of PIMCO's trade allocation process, portions of new fixed income investment opportunities are distributed among Account categories where relevant portfolio managers seek to participate in the investment. Those portions are then further allocated among the Accounts within such categories pursuant to PIMCO's trade allocation policy, as described above. Portfolio managers managing quantitative strategies and specialized Accounts, such as Accounts focused on international securities, mortgage-backed securities, bank loans, or other specialized asset classes, will likely receive an increased distribution of new fixed income investment opportunities where the investment involves a quantitative strategy or specialized asset class that matches the investment objective or focus of the Account category, which may adversely affect an Account. In addition, quantitative strategies and certain other Accounts or types of Accounts will have access to certain trading platforms in PIMCO's discretion that may result in priority of trade allocations over other Accounts or more favorable execution.

Some Private Funds or other Accounts may be limited or restricted in their ability to participate in certain investment products, including initial public offerings (“IPOs”) pursuant to certain restrictions, such as IPO allocation rules issued by FINRA or certain privately offered securities that may only be purchased by certain entities. This may result in some Accounts not being able to fully participate, or to participate at all, in such opportunities. Where applicable, the offering documents for relevant Private Funds contain more information about how investment opportunities may be allocated with respect to such funds.

Equity. With respect to an order to buy or sell an equity security in the secondary market, a portfolio manager is responsible for allocating the order across Accounts with similar investment guidelines and investment styles fairly and equitably over time, taking into consideration the relevant factors discussed above.

Non-Standard Transactions. Non-standard transactions (“NSTs”) often involve bespoke investments that involve direct negotiations of terms other than price with a borrower, issuer, originator, or other counterparty. An NST may result in majority or minority ownership control interests in assets, such as operating companies and real estate joint ventures, or may include private equity deals, whole loan deals, deals involving new origination, negotiated deals in emerging markets, certain restructurings and negotiated deals with state-owned enterprises or entities closely related to senior public officials, among other types of transactions. Although NSTs may involve fixed income or equity securities, they may involve unique, new and/or non-standard allocation considerations. In seeking to achieve fair and equitable treatment of Client Accounts over time, certain allocation methodologies may be adopted from time to time based on a variety of factors including, without limitation, the nature of the instrument, divisibility of the investment, whether the proposed investment is a “follow-on” investment, contractual terms, liquidity profile and risk profile of the investment, tax-related considerations, leverage constraints and related expenses.

Potential Conflicts of Interest Stemming from Trade Aggregation and Allocation. Allocating orders among

Accounts can create potential conflicts of interest, particularly in circumstances where the availability of investment opportunities is limited. These conflicts include, without limitation, the receipt of greater fees or compensation (including performance fees or similar incentive compensation) from some Accounts, or because we are affiliated or have other relationships with certain Accounts. To address these potential conflicts of interest, PIMCO has developed allocation policies and procedures that are reasonably designed to achieve fair and equitable allocations of investment opportunities among Accounts over time. Notwithstanding the foregoing, any particular allocation decision among Accounts may be more or less advantageous to any one Account or group of Accounts and certain allocations will, to the extent consistent with our fiduciary obligations, deviate from a pro rata basis among Accounts in order to address, for example, variances from risk exposure, portfolio characteristic parity, or target ranges, differences in legal, tax, regulatory, risk management, concentration, exposure, investment management agreements and Account guideline limitations and/or mandate or strategy considerations for the relevant Accounts. We may determine that an investment opportunity or particular purchases or sales are appropriate for one or more Accounts, but not appropriate for other Accounts, or are appropriate or suitable for, or available to, Accounts but in different sizes, terms, or timing than is appropriate or suitable for other Accounts. For example, some Accounts have higher risk tolerances than other Accounts, such as Private Funds, which, in turn, allows PIMCO to allocate a wider variety and/or greater percentage of certain types of investments (which may or may not outperform other types of investments) to such Accounts. Further, participating Accounts may not receive a pro rata portion of a transaction because the portfolio manager is seeking to achieve portfolio characteristic parity, as discussed above, and certain Accounts participating in the transaction are outside of or farther from a designated risk exposure or performance characteristic target range than other participating Accounts. Those Accounts receiving an increased allocation as a result of the effect

of their respective risk tolerance may be Clients that pay higher investment management fees or that pay incentive fees or that PIMCO otherwise has an incentive to benefit. Please refer to Item 11, "Performance-Based Fees and Side-By-Side Management" for additional information. In addition, certain Account categories focusing on certain types of investments or asset classes (e.g., emerging market securities, mortgage-backed securities, bank loans, commercial real estate equity investments, data center investments or other specialized strategies) will be given priority in new issue distribution and transaction allocation with respect to the investments or asset classes that are the focus of their investment mandate. Similarly, portfolio managers who are responsible for structuring or monitoring certain investments may be given priority in the allocation process for the Accounts they manage. With respect to certain commercial real estate equity investments, PPRE Legacy Accounts have an allocation priority relative to other PIMCO Accounts that are permitted to invest in the same type of real estate investment. As a result, PIMCO Accounts may be disadvantaged in the competition for applicable real estate investment or disposition opportunities. PIMCO does not expect this allocation priority to have a material impact on other Accounts. We may also take into account the bases for an issuer's allocation to PIMCO, for example, by giving priority allocations to Accounts holding existing positions in the issuer's debt if the issuer's allocation to PIMCO is based on such holdings. We also may determine not to allocate to or purchase or sell for certain Accounts all investments for which all Accounts may be eligible. In addition, legal, contractual, or regulatory issues and/or related expenses applicable to PIMCO or one or more Accounts may result in certain Accounts not receiving securities or other instruments that may otherwise be appropriate for them or may result in PIMCO selling securities or other instruments out of Accounts even if it might otherwise be beneficial to continue to hold them. Additional factors that are taken into account in the distribution and allocation of investment opportunities to Accounts include, without limitation: ability to utilize leverage and risk tolerance of the Account; the amount of discretion

and trade authority given to us by the Account; availability of other similar investment opportunities; the Account's investment horizon and objectives; hedging, cash and liquidity needs of the portfolio; minimum increments and lot sizes; and underlying benchmark factors. Given all of the foregoing factors, the amount, timing, structuring, or terms of an investment by an Account may differ from, and performance may be lower than, investments and performance of other Account, including those that may provide greater fees or other compensation (including performance-based fees or allocations) to PIMCO. To mitigate these potential or actual conflicts and assure compliance with PIMCO's trade allocation policy, PIMCO has developed and maintains reporting systems that: (1) monitor Accounts for relative performance and other surveillance measures as compared to other Accounts with similar investment guidelines and objectives, and (2) assist portfolio managers in determining each Account's eligibility to participate in particular trades, based on their respective investment guidelines and objectives, and (3) monitor variances in overall risk and performance characteristics across Accounts with similar investment guidelines and objectives.

Certain conflicts of interest may arise from situations in which PIMCO does not aggregate and allocate trades among Clients and Affiliate Clients. Although PIMCO coordinates its trading activities with certain Investment Adviser Affiliates and Non-U.S. Advisers, for other Investment Adviser Affiliates and Non-U.S. Advisers, PIMCO and those affiliates trade separately. In such case, PIMCO and these advisers will generally not coordinate their trading activities or allocate opportunities to the other's clients. Because PIMCO manages strategies for its Clients that are similar to strategies managed by PIMCO's affiliates for Affiliate Clients, this could result in Clients of PIMCO and Affiliate Clients of Investment Adviser Affiliates and Non-U.S. Advisers competing for investment or disposition opportunities. In addition, PIMCO's affiliates will not have an incentive to share investment recommendations or analysis with PIMCO, in order to protect investment opportunities for Affiliate Clients. For example, certain PIMCO Clients are permitted to invest in the same type

of commercial real estate investments as PPRE GmbH, an affiliate whose investment management operations operate autonomously from PIMCO. Investment opportunities available to PPRE GmbH or PPRE GmbH clients will not necessarily be made available to PIMCO or PIMCO Clients notwithstanding the fact that certain investment professionals may be dual personnel of PIMCO and PPRE GmbH. As a result, an Account may be disadvantaged in the competition for applicable investment or disposition opportunities.

In addition, investment opportunities that are made available to PPRE GmbH, an affiliate whose investment management operations operate autonomously from PIMCO, will not necessarily be made available to PIMCO or PIMCO Clients. It will not always be clear whether a particular investment opportunity should be allocated to a PIMCO Client or to accounts managed by PPRE GmbH. As a result, a PIMCO Client and other investment vehicles managed or advised by PIMCO may be disadvantaged in the competition for applicable investment or disposition opportunities.

Certain individuals are dual personnel such that they are providing services on behalf of both PIMCO and PPRE GmbH. PIMCO and PPRE GmbH have implemented controls intended to address the conflicts associated with these arrangements. However, it is possible that not all conflicts will be identified or, if identified, addressed in a way that is favorable to PIMCO's clients.

As noted in Item 8 above, PIMCO engages Research Affiliates, LLC ("RA") to develop and offer products for certain investment vehicles which may include PIMCO Funds, Separate Accounts and/or Wrap Programs ("RA Strategies"). In connection with the RA Strategies, RA will provide PIMCO, or counterparties designated by PIMCO (or, in the case of Wrap Programs, sub-advisers engaged by PIMCO), with relevant proprietary model portfolio or portfolios for purposes of developing equity total return swaps based on such model portfolio or portfolios, as applicable. PIMCO may sub-license to financial intermediaries certain model portfolio information it obtains from RA ("RA model portfolio information"). It is expected that such intermediaries will be provided

updates to RA model portfolio information on a different schedule than PIMCO receives such updates. Accordingly, PIMCO Funds or Accounts that follow an RA Strategy may be competing for applicable investment or disposition opportunities with accounts managed by financial intermediaries who receive RA model portfolio information. Transactions ultimately placed by such intermediaries for their investors or by the Funds or Accounts may be subject to price movements, particularly with large orders relative to the given security's trading volume, that may result in execution prices that are less favorable. Further, while PIMCO takes reasonable steps in an effort to mitigate the market impact caused by transactions for accounts over which PIMCO has investment or trading authority, because PIMCO does not control the intermediary's execution of transactions for its clients, PIMCO cannot control the market impact of such transactions to the same extent that it may be able to for accounts over which PIMCO has trading authority. Such intermediaries are expected to have sole authority and responsibility for the selection of broker-dealers and the execution of transactions for their client accounts. PIMCO is not responsible for placing orders for the execution of transactions involving assets of such intermediary client accounts or for giving instructions to the intermediary with respect thereto.

Wrap Program Allocations. Generally, a Wrap Program's fee arrangements include structural features, such as "all inclusive" fee arrangements that effectively discount commissions to zero on trades executed with the Sponsor or the Sponsor's designated broker-dealers in consideration of the Wrap Program fee paid. These arrangements cause transactions executed away from the Sponsor or the Sponsor's designated broker-dealer to be more costly to a Wrap Program Client from a commission viewpoint than the same order would be if not executed away. As a result, Wrap Program Clients may receive less favorable net prices or poorer executions than might be the case if PIMCO had full discretion to select broker-dealers to execute these transactions. However, with regard to transactions in fixed income securities, commissions, commission equivalents (such as markups or markdowns) or other transaction-related expenses are

generally not included in Wrap Program fee arrangements. In such cases, PIMCO will typically aggregate fixed income securities orders among the Wrap Programs of different Sponsors and then execute such orders according to its trade allocation policy and procedures. As set forth in Item 11 under "Overview of Trade Aggregation Process" and "Overview of Trade Allocation Process", the overriding objective of our trade allocation policy is to achieve fair and equitable treatment of Accounts over time. PIMCO seeks to ensure that trade allocations are timely, that no set of trade allocations is accomplished to unfairly advantage one client over another and that over time our Clients are treated equitably, subject to any contractual or other considerations, including the considerations discussed in more detail under "Trade Allocation" as may be applicable in the particular circumstance. Our apportionment of trades may not be strictly pro rata depending on our determination of all relevant factors such as lot size, relative liquidity of the position, existing or targeted account weightings in particular securities, account size, cash availability, diversification requirements and investment objectives, restrictions and time horizons, which may result in more particularized allocations. Please see Item 12, "Brokerage Practices."

Conflicts Relating to Non-Discretionary Advisory Services. We provide non-discretionary investment management services, pursuant to which we may advise a Client with respect to purchasing, selling, holding, valuing, or exercising rights associated with particular investments. In these circumstances, we generally do not execute purchases or sales on behalf of the Client, or a Client may require that PIMCO seek the Client's approval prior to executing any buy or sell transactions for the Client's Account. Discretionary and non-discretionary Clients may hold the same or similar instruments. Where PIMCO is given authority to execute transactions upon the approval of a non-discretionary Client, there could be timing differences related to the provision of advice to a non-discretionary Client for consideration and that Client's determination of whether or not to act on the advice. As a result, trades may be executed for discretionary Clients in advance of executions for non-discretionary Clients, potentially disadvantaging the non-discretionary Clients.

Non-discretionary Clients may not be able to participate in aggregated transactions due to such timing differences. As a result, non-discretionary Clients may not be able to benefit from the most favorable price for a particular investment or may not be able to participate in certain investment opportunities. This may also occur with respect to trades executed for Non-Discretionary Wrap Programs where PIMCO provides a model portfolio to be analyzed and implemented by the Sponsor or another manager.

Inconsistent Investment Positions, Timing of Competing Transactions and Other Conflicts. From time to time, we take an investment position or action for one or more Clients that may be different from, or inconsistent with, an action or position taken for one or more other Clients or Affiliate Clients having similar or differing investment objectives, mandates or guidelines. These positions and actions may adversely impact, or in some instances may benefit, one or more affected Clients (including Clients that are our affiliates) or Affiliate Clients in which we have an interest, or which pay us higher fees or a performance fee. For example, a Client or Affiliate Client may buy a security, and another Client or Affiliate Client may establish a short position in that same security. Such inconsistent positions may arise with respect to quantitative/systematic strategies, for example, when the investment model establishes a short position, and one or more other Clients maintain a long position. The subsequent short sale may result in a decrease in the price of the security that the other Client or Affiliate Client holds. Similarly, transactions or investments by one or more Clients or Affiliate Clients may have the effect of diluting or otherwise disadvantaging the values, prices or investment strategies of another Client or Affiliate Client. In addition, a Client or Affiliate Clients may engage in or otherwise participate in transactions that have the effect of providing financing to other Accounts (or their portfolio companies) or to PIMCO or its affiliates. A Clients or Affiliate Clients may also enter into sell protection credit default swap transactions in which PIMCO has caused or may cause other Clients or Affiliate Clients to enter into buy protection credit default swap transactions in the same underlying issuer. In these situations, potential

conflicts may arise should the underlying issuer undergo a credit event and PIMCO must exercise discretion whether to elect physical or cash settlement at the eventual CDS auction for participating Accounts. For example, PIMCO's settlement election on behalf of Accounts with sell protection positions could have an adverse effect on Accounts with buy protection positions. When we implement for one Client a portfolio decision or strategy ahead of, or contemporaneously with, similar portfolio decisions or strategies of another Client or Affiliate Client, market impact, liquidity constraints or other factors could result in one or more Clients or Affiliate Clients receiving less favorable trading results, the costs of implementing such portfolio decisions or strategies could be increased or such Clients or Affiliate Clients could otherwise be disadvantaged. On the other hand, potential conflicts may also arise because portfolio decisions regarding a Client or Affiliate Client may benefit other Clients or Affiliate Clients. For example, the sale of a long position or establishment of a short position for a Client or Affiliate Client may decrease the price of the same security sold short by (and therefore benefit) other Clients or Affiliate Clients, and the purchase of a security or covering of a short position in a security for a Client or Affiliate Client may increase the price of the same security held by (and therefore benefit) other Clients or Affiliate Clients.

Under certain circumstances, a Client could invest in a transaction in which one or more other Clients or Affiliate Clients are expected to participate, or already have made or will seek to make, an investment. Such Clients or Affiliate Clients may have conflicting interests and objectives in connection with such investments, including with respect to views on the operations or activities of the issuer involved, the targeted returns from the investment and the timeframe for, and method of, exiting the investment. When making such investments, PIMCO may do so in a way that favors one Client or Affiliate Client over another Client or Affiliate Client, even if both Clients and Affiliate Clients are investing in the same security at the same time. Certain Clients or Affiliate Clients (typically, certain Private Funds) may invest on a "parallel" basis (i.e., proportionately in all transactions at

substantially the same time and on substantially the same terms and conditions). In addition, other Clients invest in many of the same types of investments as another Client or Affiliate Client. However, there may be investments in which one or more of such Clients do not invest (or invest on different terms or on a non-pro rata basis) due to factors such as legal, tax, regulatory, business, contractual, financial or other similar considerations or due to the provisions of a Client's or Affiliate Client's governing documents. Decisions as to the allocation of investment opportunities among such Clients and Affiliate Clients present numerous conflicts of interest, which may not be resolved in a manner that is favorable to a Client's interests. To the extent an investment is not allocated pro rata among such entities, as described above, a Client could incur a disproportionate amount of income or loss related to such investment relative to such other Client.

In addition, certain Clients and or Affiliate Clients invest alongside one another in the same underlying investments or otherwise pursuant to a substantially similar investment strategy as one or more other Clients or Affiliate Clients. In such cases, certain Clients (such as Separate Accounts) or Affiliate Clients may have preferential liquidity and information rights relative to other Clients or Affiliate Clients holding the same investments, with the result that such Clients or Affiliate Clients will be able to withdraw/redeem their interests in underlying investments in priority to Clients or Affiliate Clients who may have more limited access to information or more restrictive withdrawal/redemption rights. Similarly, certain Clients and/or Affiliate Clients are expected to invest in an Account, such as a Private Fund, and that Account may have access to additional or different information regarding the portfolio and its activities relative to other investors, which information may inform such Client or Affiliate Client's decision to invest in or withdraw from the Account. Clients with more limited information rights or more restrictive liquidity may therefore be adversely affected in the event of a downturn in the markets.

Although we generally do not actively trade or manage assets on our own behalf, from time to time, PIMCO or an affiliate may invest on its own behalf, as principal, for strategic or other reasons (a proprietary investment). This may occur, for example, when the investment is an equity interest (e.g., stock or warrants) made in connection with PIMCO's use of a product or service supplied by the issuer. In connection with these proprietary investments, PIMCO may eventually hold common stock or other publicly traded equity and may ultimately dispose of or hedge its exposure, as principal, to such proprietary investment. Such proprietary investments may be suitable for, or alternatively competitive with, an Account. In either case, PIMCO is permitted to allocate such investments away from an Account to PIMCO.

These proprietary investments can ultimately result in conflicts with Accounts that also invest (including debt and equity investments) in or transact with the issuer or with other companies which may be transacting with the issuer. In other cases, an Account may be prohibited from making or disposing of an investment in the proprietary investment, or a related instrument, even when it would be in the Account's best interest to do so. Although PIMCO will seek to mitigate and address such conflicts in a fair and reasonable manner, it may not be able to do so, and will have an incentive to favor PIMCO's interests over the Account's interests. PIMCO generally seeks to avoid committing to such investments if they would otherwise be suitable for and there is an investment interest on behalf of an Account; however, there is no guarantee that such measures will adequately mitigate the potential or actual conflicts, and PIMCO will have an incentive to favor its interests over an Account's interests.

Further, potential conflicts may be inherent in our use of multiple strategies. For example, conflicts will arise in cases where different Clients or Affiliate Clients invest in different parts of an issuer's capital structure, including circumstances in which one or more Clients or Affiliate Clients may own private securities or obligations of an issuer and other Clients or Affiliate Clients may own or seek to acquire securities of the same issuer. For

example, a Client or Affiliate Client may acquire a loan, loan participation or a loan assignment of a particular borrower in which one or more other Clients or Affiliate Clients have an equity investment or may invest in senior debt obligations of an issuer for one Client or Affiliate Client and junior debt obligations or equity of the same issuer for another Client or Affiliate Client.

We may also, for example, direct a Client to invest in a tranche of a structured finance vehicle, such as a CLO or CDO, where we or an affiliate are also, at the same or different time, directing another Client or Affiliate Client to make investments in a different tranche of the same vehicle, which tranche's interests may be adverse to other tranches, either now or in the future. We may also cause a Client or Affiliate Client to purchase from, or sell assets to, an entity, such as a structured finance vehicle, in which other Clients or Affiliate Clients may have an interest, potentially in a manner that will have an adverse effect on the other Clients or Affiliate Client. There may also be conflicts where, for example, a Client holds certain debt or equity securities of an issuer, and that same issuer has issued other debt, equity or other instruments that are owned by other Clients or Affiliate Client or by an entity, such as a structured finance vehicle, in which other Clients or Affiliate Client have an interest. PIMCO may also cause Clients to invest in structured finance vehicles or other entities managed or serviced by PIMCO or its affiliates to which PIMCO, its affiliates or other Clients or Affiliate Clients contributed assets. This could lead to conflicts where, for example, Clients that own securities of the issuer may benefit from pursuing claims against the Clients or Affiliate Clients or PIMCO affiliates that contributed assets. PIMCO may also structure and/or cause Clients to invest in or otherwise transact with vehicles whose purpose is to mitigate PIMCO's or its affiliates' "risk retention" requirements. PIMCO may also cause Clients or Affiliate Clients to invest in or otherwise engage in transactions that have the effect of supporting the growth of new lines of business being developed by PIMCO and/or its affiliates generally. In each of the situations described above, we may take actions with respect to the assets held by one Client or Affiliate Clients that are adverse to the other

Clients or Affiliate Clients, for example, by foreclosing on loans, disposing of equity or by putting an issuer into default, or by exercising rights to purchase or sell to an issuer or liquidate an issuer, causing an issuer to take actions adverse to certain classes of securities, or otherwise. In negotiating the terms and conditions of any such investments, or any subsequent amendments or waivers or taking any other actions, we may find that the interests of a Client or Affiliate Client and the interests of one or more other Clients or Affiliate Clients could conflict. In these situations, decisions over items such as whether to make the investment, exercise certain rights, or take or determine not to take an action, proxy voting, corporate reorganization, how to exit an investment, or bankruptcy or similar matters (including, for example, whether to trigger an event of default or the terms of any workout) may result in conflicts of interest. In addition, decisions over the operations or activities of the issuer involved, the target returns from the investment, the timeframe for or method of, exiting the investment, or bankruptcy matters (including, for example, decisions over whether to trigger an event of default or over the terms of any workout), may result in conflicts of interest. Similarly, if an issuer in which a Client and one or more other Clients or Affiliate Clients directly or indirectly hold different classes of securities (or other assets, instruments or obligations issued by such issuer or underlying investments of such issuer) encounters financial problems, decisions over the terms of any workout will raise conflicts of interests (including, for example, conflicts over proposed waivers and amendments to debt covenants). For example, a debt holder may be better served by a liquidation of the issuer in which it may be paid in full, whereas an equity or junior bond holder might prefer a reorganization that holds the potential to create value for the equity holders. Although in some cases PIMCO may refrain from taking certain actions or making certain investments on behalf of Clients in order to avoid or mitigate certain conflicts of interest or to prevent adverse regulatory or other effects on PIMCO, or may sell investments for certain Clients or Affiliate Clients (in each case potentially disadvantaging the Clients or Affiliate Clients on whose behalf the

actions are not taken, investments not made, or investments sold). In other cases, PIMCO may not refrain from taking actions or making investments on behalf of certain Clients or Affiliate Clients that have the potential to disadvantage other Clients or Affiliate Clients. In addition, PIMCO may take actions or refrain from taking actions in order to mitigate legal risks to PIMCO or its affiliates or another Client or Affiliate Client even if disadvantageous to a Client.

Examples of when PIMCO may determine to refrain from or proceed with pursuing investments that could have conflicting effects on Clients include, but are not limited to, when (i) PIMCO or its affiliates are providing (or may provide) advice or services to an entity involved in such activity or transaction; (ii) PIMCO or an affiliate may be engaged in the same or a related activity or transaction to that being considered on behalf of the Client; (iii) there are political, public relations, or other reputational considerations relating to counterparties or other participants in such activity or transaction; or (iv) such activity or transaction on behalf of or in respect of a Client could affect in tangible or intangible ways PIMCO, its affiliates, and/or other Clients or Affiliate Clients.

Certain investments may engage in activities or take actions that adversely impact the Account or its investments. With respect to investments for which it does not exercise influence or control, PIMCO will likely have limited or no ability to impact such matters. In addition, if other clients of PIMCO have a controlling interest and exercise influence or control over the management or operational decisions of an investment, such decisions may, at times, be in direct conflict with the interests of the Account. Furthermore, with respect to investments for which it does exercise influence or control, there can be no assurance that PIMCO will be able to impact matters that adversely impact the Account or its investments; for example, directors appointed by PIMCO on behalf of an Account will have duties to persons other than the Account and/or may recuse themselves from matters presenting actual or potential conflicts of interest.

PIMCO and its clients have received exemptive relief from the SEC relating to possible side-by-side investments by an Account and Registered Fund(s). The terms of the relief may

limit investment opportunities available to an Account, the terms, conditions and structure of such investment opportunities, and an Account's ability to make follow-on investments or dispose of investments except in compliance with the relief. Alternatively, in some cases, an Account may be constrained in its ability to negotiate the terms of an investment, even if it could be advantageous to do so, in order that it may invest alongside Registered Funds in certain investments without relying upon the relief.

It is expected that Accounts will compete with PIMCO, PIMCO-sponsored funds or entities or other affiliates of PIMCO with respect to investment opportunities; similarly, it is expected that certain portfolio investments will be in competition with investments owned by or affiliated with PIMCO, PIMCO-sponsored funds or entities or other affiliates of PIMCO (e.g., investments in similar geographic regions or markets may compete with respect to customers, tenants and/or purchasers). PIMCO will be subject to conflicts of interest in resolving such matters; for instance, PIMCO may be incentivized to use Account information for the benefit of a competitor entity, or to direct business to entities with respect to which PIMCO expects to receive higher fees or other compensation.

Additionally, certain conflicts may exist with respect to portfolio managers who make investment decisions on behalf of several different types of Clients. Such portfolio managers have an incentive to allocate trades, time or resources to certain Clients, including those Clients who pay higher investment management fees or that pay incentive fees or allocations, over other Clients. These conflicts may be heightened with respect to portfolio managers who are eligible to receive a performance allocation under certain circumstances as part of their compensation. For example, when a portfolio manager receives compensation in the form of incentive fees or allocations with respect to an Account for which they do not manage, the portfolio manager may be incentivized to take actions that are not in the best interests of the Account the portfolio manager manages. To mitigate these conflicts, PIMCO's policies and procedures seek to ensure that all Clients are treated fairly and equitably over time without consideration of PIMCO's

or its affiliates' (or such personnel's) pecuniary, investment or other financial interests.

Portfolio managers may also have an incentive to temporarily improve the appearance of an Account's performance before the end of a reporting period. For example, a portfolio manager may (i) place market-moving orders in a security that is held in an Account to increase the market price and, as a result, the value of the holdings in the Account; and/or (ii) sell holdings that have experienced losses and purchase high-performing securities at the end of the period so that the list of holdings reported includes the securities that performed well and excludes the securities that performed poorly. Such trading practices, also known as "portfolio pumping" and "window dressing," are prohibited.

In addition, certain strategies are only able to accommodate a limited amount of capital or can become more challenging to implement as assets increase above certain levels. In situations where PIMCO is paid asset-based fees, PIMCO has an incentive to accept new assets or form products with qualities similar to existing products in situations that may disadvantage existing Clients.

PIMCO may conduct litigation or engage in other legal actions on behalf of one or more Clients. In such cases, Clients may be required to bear certain fees, costs, expenses and liabilities associated with the litigation. Other Clients or Affiliate Clients that are or were investors in, or otherwise involved with, the subject investments may or may not (depending on the circumstances) be parties to such litigation actions, with the result that certain Clients may participate in litigation actions in which not all Clients or Affiliate Clients with similar investments may participate, and such non-participating Clients or Affiliate Clients may benefit from the results of such litigation actions without bearing or otherwise being subject to the associated fees, costs, expenses and liabilities. PIMCO, for example, typically does not pursue legal claims on behalf of its Separate Accounts. Furthermore, in certain situations, litigation or other legal actions pursued by PIMCO or its affiliates on behalf of a Client or Affiliate Client may be brought against or

otherwise adverse to a portfolio company or other investment held by a Client or Affiliate Client.

PIMCO or its affiliates may have conflicts with respect to the exercise of proxies, consents and similar rights. In addition, PIMCO may restrict or otherwise limit its governance or voting rights with respect to a Client investment in order to avoid certain regulatory consequences that could result in additional costs and disclosure obligations for, or impose restrictions on PIMCO, its affiliates and/or other Clients or Affiliate Clients. This could have a negative impact on the Clients whose voting rights are limited.

Similarly, PIMCO proprietary entities, as applicable, could be allocated (and if structured as a U.S. operating company, are expected to be allocated) at least half or more of the voting rights or governance rights (including the right to elect at least half of the board of directors) with respect to an aggregating entity (which could be a limited liability company) even where other Funds (or Other Clients or third-party co-investors) own a majority of the economics or equity in the entity. Where PIMCO proprietary entities, other Accounts or other co-investors have interests or requirements that do not align with those of a different Account, including in particular differing liquidity needs or desired investment horizons, conflicts of interest relating to the manner in which the voting or governance rights of an aggregating entity (or similar entity) are exercised, will in certain cases arise, potentially resulting in an adverse impact on an Account.

Please refer to Item 17, "Voting Client Securities" for additional detail on PIMCO's proxy voting policy.

While we have highlighted what we believe to be reasonably foreseeable actual or potential material conflicts, the foregoing is not a complete list of conflicts to which PIMCO or Clients may be subject. Any conflict of interest will be reviewed on a case-by-case basis. Any review will take into consideration the interests of the relevant Clients, the circumstances giving rise to the conflict, applicable PIMCO policies and procedures, and applicable laws. Clients (and investors in PIMCO Funds) should be aware that conflicts will not necessarily be resolved in favor of their interests and may in fact be

resolved in a manner adverse to their interests. PIMCO will attempt to resolve such matters fairly, but even so, matters may be resolved in favor of other Clients or Affiliate Clients, which pay PIMCO higher fees or performance fees or in which PIMCO or its affiliates have a significant proprietary interest. There can be no assurance that any actual or potential conflicts of interest will not result in a particular Client or group of Clients receiving less favorable investment terms or returns from certain investments than if such conflicts of interest did not exist.

Conflicts of the nature described above may also occur between Clients, on the one hand, and PIMCO or its affiliates, on the other. These conflicts will not always be resolved in favor of the Client. In addition, because PIMCO has numerous affiliates, including Allianz, a large multi-national financial institution, conflicts similar to those described above may occur between PIMCO's Clients and these affiliates or clients and accounts managed by these affiliates. These affiliates (or their clients), certain of which generally operate autonomously from PIMCO, may take actions that are adverse to PIMCO's Clients. In many cases, including on account of their autonomous operations, PIMCO will have limited or no ability to mitigate those actions or address those conflicts, which could adversely affect Client performance. In addition, certain regulatory restrictions may prohibit us from using certain brokers or investing in certain companies (even if such companies are not affiliated with Allianz) because of the applicability of certain laws and regulations applicable to PIMCO, Allianz SE or their affiliates. An Account's willingness to negotiate terms or take actions with respect to an investment may also be, directly or indirectly, constrained or otherwise impacted to the extent Allianz SE, PIMCO, and/or their affiliates, directors, partners, managers, members, officers or personnel are also invested therein or otherwise have a connection to the subject investment (e.g., serving as a trustee or board member thereof).

Clients (including investors in the PIMCO Funds) should also be aware that a Client may experience losses associated with decisions or actions directly or indirectly

attributable to PIMCO, and PIMCO may determine whether compensation to the Client for such losses is appropriate in view of its standard of care. PIMCO will attempt to resolve such matters fairly subject to applicable PIMCO policies and procedures, and applicable laws, but even so, such matters may not be resolved in favor of Clients' (including Fund investors') interests and may in fact be resolved in a manner adverse to their interests.

Performance-Based Fees and Side-By-Side

Management. As discussed above and under Item 6, "Performance-Based Fees and Side-by-Side Management," we manage different types of Accounts having different fee arrangements. Side-by-side management of different types of Accounts raises potential conflicts of interest. Registered Funds, for example, generally pay management fees based on a fixed percentage of assets under management, while Separate Accounts and Private Funds may have more varied fee structures, including a combination of asset- and performance-based compensation (for example, carried interest), while Wrap Fee Clients are subject to wrap fees of which PIMCO receives a portion for its advisory services. Where (i) the actions taken on behalf of one Account may affect other similar or different Accounts (e.g., because such Accounts have the same or similar investment styles or otherwise compete for investment opportunities, have potentially conflicting investments or investment styles, or have differing ability to engage in short sales and economically similar transactions) and (ii) PIMCO and its personnel have different interests in such Accounts (e.g., PIMCO or its related persons are exposed to differing potential for gain or loss through different compensation structures – including circumstances where some Accounts pay only asset-based fees while others are subject to performance-based or incentive fees or allocations), PIMCO has an incentive to favor certain Accounts over others that are less lucrative to PIMCO or its affiliates, or to favor Accounts in which it or its affiliates have a significant proprietary interest.

In addition, although PIMCO is not the book of record for Accounts, PIMCO has incentives to influence the valuation of certain investments. For example, where applicable, PIMCO could be incentivized to employ valuation methodologies or take other actions that: (i) improve an Account's track record; (ii) minimize losses from investments that have experienced a permanent impairment that must be returned prior to receiving performance-based or incentive fees or allocations; or (iii) increase fees payable to PIMCO or its affiliates. Similarly, when PIMCO receives performance-based fees or allocations, or PIMCO portfolio management personnel have a financial incentive to achieve gains in excess of the disincentive to suffer losses (e.g., through incentive compensation arrangements), PIMCO and/or such personnel have an incentive to choose investments that are riskier or more speculative than might otherwise be chosen. PIMCO may also be incentivized to hold on to investments that have poor prospects for improvement in order to receive ongoing fees in the interim and, potentially, additional compensation (for example, carried interest) if such asset's value appreciates in the future. Depending on the structure of the arrangement, performance-based fees and allocations provide for compensation to PIMCO on unrealized gains and provide a financial disincentive to the client to terminate the advisory arrangement. To mitigate these conflicts, PIMCO's policies and procedures seek to provide that investment and valuation decisions are made based on the best interests of Clients, in accordance with applicable law, and without consideration of PIMCO's (or such personnel's) pecuniary, investment or other financial interests.

Certain Principal Transactions in Connection with the Organization of a Private Fund.

On occasion and subject to applicable law and a Private Fund's governing documents, PIMCO or a related person (including its affiliates, officers, directors or employees) may purchase investments on behalf of and in anticipation of opening a Private Fund to hold such investment. Such investments may be transferred to the Private Fund. Generally, to the extent permitted by law, the Private Fund would pay a rate of interest and purchase the investment at cost.

Additionally, certain Private Funds that are generally expected to invest on a “parallel” basis (i.e., proportionately in all transactions at substantially the same time and on substantially the same terms and conditions) may engage in transactions at the end of the offering period that are intended to rebalance the portfolio in accordance with the final size and/or available capital of each respective entity. In some cases, a Fund or Account may similarly “warehouse” investments for Funds or future co-investors that are not in the same structure. More information on these arrangements can be found in the offering documents of the particular Private Fund.

In other cases, and subject to applicable law and a Private Fund’s governing documents, PIMCO or a related person (including its affiliates, officers, directors or employees) may invest in a Private Fund (the “Affiliated Initial Investor”) prior to the admittance of other non-affiliated investors to facilitate potential investments by such Private Fund, with the Affiliated Initial Investor being repaid (at cost plus, in PIMCO’s discretion, an interest charge) and withdrawing from the Private Fund. The potential repayment to the Affiliated Initial Investor gives rise to conflicts of interest. In particular, PIMCO may be incentivized to have the Private Fund admit non-affiliated investors as soon as possible, to enable the Affiliated Initial Investor to be repaid and withdraw. In addition, the Private Fund will repay the Affiliated Initial Investor regardless of the performance of or any developments relating to the investment at the time of repayment, which could result in the Affiliated Initial Investor receiving proceeds in excess of the investment’s current valuation or the investment being subject to material issues when non-affiliated investors are admitted.

For the purposes of determining if 25% or more of a pooled vehicle, is represented by PIMCO or a related person, PIMCO will calculate based upon the assets of the pooled vehicle as a whole and not any particular class of interests.

Potential Restrictions and Conflicts Relating to Information Possessed or Provided By PIMCO

Availability of Proprietary Information. In connection with its activities, certain persons within PIMCO at times will receive information regarding proposed investment activities for PIMCO, its affiliates, Clients or Affiliate Clients that is not generally available to the public. There will be no obligation on the part of PIMCO to make available for use by a Client, or to effect transactions on behalf of a Client on the basis of, any such information. In many cases, such persons will be prohibited from disclosing or using such information for their own benefit or for the benefit of any other person, including Clients. Similarly, one or more Clients will have, as a result of receiving client reports or otherwise, access to information regarding PIMCO’s transactions or views that are not available to other Clients and may act on such information through accounts managed by persons other than PIMCO. Such transactions could negatively impact Clients through market movements or by decreasing the pool of available securities or liquidity. Clients may also be adversely affected by cash flows and market movements arising from purchase and sale transactions, as well as increases of capital in, and withdrawals of capital from, Accounts of other Clients. These effects can be more pronounced in thinly traded securities and less liquid markets.

A potential conflict of interest may arise as a result of the portfolio manager’s day-to-day management of an Account. Because of their role in managing Client Accounts, the portfolio managers know the size, timing and possible market impact of a Client’s trades. It is possible that the portfolio managers could use this information, or other information (including material non-public information (“MNPI”)) learned from the investments made by the Client to the advantage of other Clients or Affiliate Clients they manage and to the possible detriment of a Client.

Material Non-Public Information/Insider Trading.

From time to time, PIMCO personnel may come into possession of material, non-public information (“MNPI”) which, if disclosed, might affect an investor’s decision to buy, sell or hold a security. Employees may obtain such information through PIMCO’s investment management

activities or through employees' outside activities. Under applicable law, PIMCO personnel generally will be prohibited from improperly disclosing or using such information for their personal benefit or for the benefit of any other person, regardless of whether that person is a Client. Accordingly, should a PIMCO employee come into possession of MNPI with respect to an issuer, he or she generally will be prohibited from communicating such information to, or using such information for the benefit of, Clients, which could limit the ability of Clients to buy, sell or hold certain investments, thereby limiting the investment opportunities or exit strategies available to Clients. In addition, holdings in the securities or other instruments of an issuer by PIMCO or its affiliates may affect the ability of a Client to make certain acquisitions of or enter into certain transactions with such issuer. PIMCO shall have no obligation or responsibility to disclose such information to, or use such information for the benefit of, any person (including Clients). Moreover, restrictions imposed by or through third-party automated trading platforms could affect a Client's ability to transact through, or the quality of execution achieved through, such platforms. We have implemented procedures, including those described herein relating to information barriers, that are designed to control the flow of and prohibit the misuse of such information (e.g., illegal securities trading based on the information) by PIMCO, our employees and on behalf of our Clients. Similarly, no employee who is aware of MNPI that relates to any other company or entity in circumstances in which such person is deemed to be an insider or is otherwise subject to restrictions under federal securities laws may buy or sell securities of that company or otherwise take advantage of, or pass on to others, such MNPI in violation of applicable law.

Information Barriers. To control the flow of MNPI within the PIMCO organization and to prevent its misuse, PIMCO has established policies and procedures that are designed to control receipt of MNPI and, where appropriate, erect information barriers. These information barriers include, as dictated by the applicable facts and circumstances, the physical, technological and operational separation ("walling off") of certain of

PIMCO's business units or personnel, as well as other policies and procedures designed to prevent the unauthorized access to, or dissemination of, MNPI. Information barriers have been established between certain groups of designated personnel who often have access to confidential information, including MNPI, and the rest of PIMCO, which is not intended to have access to such information. The purpose of these information barriers is, among other things, to limit the receipt of MNPI to such personnel who often have access to confidential information, such that the investment activities of the rest of PIMCO are not otherwise restricted because the designated personnel may have MNPI that would be imputed to the rest of PIMCO in the absence of an information barrier. PIMCO has established and is expected to continue to establish, additional information barriers when appropriate, including in connection with certain investments or business units. As a result, MNPI may not be transmitted to PIMCO personnel even if the information would be beneficial (and otherwise not conflict with relevant securities laws) for Accounts managed by other PIMCO personnel.

Other Trading Restrictions. In addition, PIMCO maintains certain restricted lists of securities and issuers that are subject to certain trading restrictions due to PIMCO's and its affiliates' business activities. We generally will restrict trading in an issuer's securities if the issuer is on a restricted list or if we otherwise have MNPI about that issuer. In some situations, we may restrict Clients from trading in a particular issuer's securities, in order to allow PIMCO or its affiliates to receive MNPI on behalf of other Clients or Affiliate Clients. An Account may be unable to buy or sell certain securities until the restriction is lifted, which could disadvantage the Account. In some situations, PIMCO could be restricted from making (or divesting of) investments in respect of some Clients but not others. In some cases, we may not initiate or recommend certain types of transactions or may otherwise restrict or limit our advice relating to certain securities if a security is restricted due to MNPI or if we are seeking to limit receipt of MNPI. In addition, PIMCO will, in many cases, rely on public information in connection with the valuation of certain securities when

another business unit within PIMCO or one of its affiliates may be otherwise in possession of MNPI suggesting that such valuations may be inaccurate.

Other Conflicts

Clients, Service Providers, and Vendors. As a general matter, PIMCO will provide an Account with ongoing research, analysis, advice and judgments regarding individual investments, general economic conditions and trends and long-range investment policy, including by providing oversight and advice with respect to the management of and strategy relating to an Account's assets, and will oversee the placement of purchase and sale orders on behalf of the Account. On the other hand, PIMCO and its affiliates provide, and will be compensated by an Account or its investments for providing, a variety of services for, and render advice to, various Clients and Affiliate Clients, including issuers of securities that PIMCO or its affiliates may recommend for purchase or sale to Clients or Affiliate Clients. From time to time, we recommend to or purchase or sell on behalf of Clients or Affiliate Clients, securities or other investment products in which PIMCO, its affiliates, or other related persons have a financial interest as the investment manager, broker-dealer, general partner (or equivalent), or trustee, or as a co-investor in such investment products. For instance, PIMCO may from time to time trade in investments issued by our Clients or Affiliate Clients. PIMCO has a potential conflict in such circumstances because PIMCO or its affiliates may be incentivized to favor its Clients or Affiliate Clients that issue securities over the Client or Affiliate Clients on whose behalf PIMCO is making the investment. Similarly, some of our Service Providers, certain distributors or placement agents of our Funds, and/or vendors are issuers of securities that PIMCO may trade in from time to time. We may determine that it is in the best interests of our Clients to purchase securities issued by one of these entities. Where appropriate and permitted under an Account's governing documents, we may from time to time recommend that certain of our Clients file claims or threaten action against other parties. To the extent such party is a Client or Affiliate Client, Service Provider,

distributor or other vendor, we may have a disincentive to recommend such action. It is PIMCO's general policy when making investment decisions not to take into account the fact that an issuer is our Client, Affiliate Client, Service Provider, distributor, or vendor.

Service Providers may be engaged to perform multiple functions in respect of investments, which will give rise to certain conflicts of interest. For instance, any servicer that also functions as valuation agent in respect of an investment will be incentivized to produce higher valuations for the investment.

PIMCO may cause a Client to (directly or indirectly) engage or otherwise transact with Affiliated Service Providers (including, without limitation, PIMCO Aurora) and operating companies that are owned by, affiliated with, or otherwise related to PIMCO or its affiliates (or their respective personnel) or other Clients or Affiliate Clients. For example, a Client may acquire mortgages from an affiliated origination company or other affiliated entity, and/or utilize an affiliated servicer (or affiliated special servicer) to service mortgages. Similarly, because certain services provided by Service Providers, such as the identification or analysis of investments and/or legal, accounting or tax services, might otherwise be provided by PIMCO employees, PIMCO has an incentive to retain such Service Providers and have them be paid by an Account rather than hiring employees or otherwise paying for these services out of its own resources, particularly since the fees, costs, expenses, and liabilities of these parties may be substantial.

A Client's involvement with Affiliated Service Providers (including PIMCO Aurora) will also give rise to conflicts of interest. For example, (i) while PIMCO has an incentive to cause a Client to utilize Affiliated Service Providers, there can be no guarantee that such Affiliated Service Providers will have a positive impact on the Client or its investments, or that they will have more expertise or produce results better than unaffiliated Service Providers; (ii) PIMCO may be less incentivized to pursue remedies and enforce rights against an Affiliated Service Provider as compared to an unaffiliated Service Provider; (iii) PIMCO may be incentivized to utilize an Affiliated Service

Provider in order to support such entity, benefit or reduce amounts owed by the other users of or purchasers from such entity, and/or benefit the PIMCO-affiliated owners of such entity (which may not include the Client), including by generating fees or other compensation paid to such entity (which may not offset or reduce fees or other amounts paid by the Client); (iv) PIMCO may be incentivized to agree to more favorable compensation terms with an Affiliated Service Provider than with an unaffiliated Service Provider, and such terms will not necessarily be confirmed as being comparable to the market rates for such services; (v) to the extent any Affiliated Service Provider is owned by or services multiple PIMCO-affiliated entities, the allocation of opportunities and expenses among the relevant entities will require the exercise of discretion, and (vi) the apportionment of working time of and/or other services performed by dual personnel and the determination of amounts charged will be subject to PIMCO's discretion. In addition, any such Affiliated Service Provider may have duties to parties other than the Client, and the Client may not be able to control or influence the standards or actions of such Affiliated Service Provider notwithstanding its affiliation. Any such Affiliated Service Provider may also be acquired by one or more third parties, which could reduce or eliminate any benefits the Client previously received by virtue of its prior affiliation. Fees paid to an affiliated service provider will be determined in PIMCO's commercially reasonable discretion.

An Account may invest in or acquire entities (directly or indirectly) that provide services to, or are used for investing by, PIMCO, Clients or Affiliate Clients and their respective affiliates (such investments, "Platform Investments"). An Account may make such investments alone or together with other affiliated and non-affiliated entities, including other Clients or Affiliate Clients. With respect to any affiliated co-investors, conflicts will arise in connection with allocating the economic interests, costs, expenses and liabilities of Platform Investments and in negotiating the terms of such investments, including indemnification and risk- and cost-sharing provisions. In addition, conflicts will arise with respect to such

investments' ongoing operations, including with respect to the management of assets, financing matters and the timing and nature of the investment's disposition. An Account may not have ultimate control of a Platform Investment, which may affect its ability to fully utilize such platform. Given that the co-investors may have different investment horizons (or for other reasons), they may seek to buy or sell interests in the Platform Investment to one another, which will give rise to conflicts particularly since the interests in any Platform Investment are likely to be illiquid and difficult to value. With respect to the provision of services to affiliates, a Platform Investment may be less inclined to negotiate terms or enforce remedies against affiliates or related parties. The entities that utilize a Platform Investment may be different than the ones that own the Platform Investment (or may utilize the Platform Investment to a different extent than their ownership interests), which will further elevate such conflicts.

A Platform Investment may compensate its management team in a number of ways, including through cash payments, annual salaries and bonuses, incentive-based compensation, fees for services or a combination of the foregoing. An Account would bear the cost of such compensation and all other Platform Investment expenses (including start-up, operating and overhead expenses) through its direct or indirect interest in the Platform Investment. Moreover, such compensation and any fees payable to a Platform Investment will not reduce or otherwise offset fees borne by an Account, notwithstanding that a Platform Investment's services and personnel may in some cases be similar to or overlap with the services provided by or personnel of PIMCO.

A Platform Investment may generate investment opportunities for Clients or Affiliate Clients, including an Account. For example, a Platform Investment that is a loan originator may be a potential source of loan investments. Whether or not an Account invests in a Platform Investment, PIMCO will have an incentive to cause an Account to acquire investments from or otherwise transact with a Platform Investment even if

similar or more favorable investment opportunities can be acquired from other sources.

PIMCO and its affiliates may arrange for or provide financing or leverage for a Private Fund's investment program and/or investments, and the Private Fund may pledge or sell assets (including pursuant to reverse repurchase agreements) to PIMCO and its affiliates in connection therewith. Additionally, certain Accounts may invest in securities for which Allianz, or its affiliates may have a relationship, such as by providing principal protection, insurance or other services.

Additionally, PIMCO or certain PIMCO Funds or other Accounts may contract with one or more broker-dealers or placement agents to assist in the placement of interests in a Fund or Account. Such broker-dealers or placement agents typically receive a flat fee or in some cases a percentage of the investments they bring to the respective Fund. Basing the placement agent's compensation on an investor's decision to invest creates a conflict of interest by incentivizing the placement agent or broker-dealer to attract investors when it may not be in the investors' best interests to subscribe.

PIMCO believes that the nature and range of or Affiliate Clients to whom PIMCO's affiliates render investment banking and other services, as well as the nature and range of PIMCO's own Clients, is such that it generally would be inadvisable to exclude such Clients or Affiliate Clients that are also issuers or that act as distributors of PIMCO products from a Client's portfolio. Accordingly, unless a Client's governing documents prohibit such investments, it is likely that the Client holdings will include the securities of issuers for whom PIMCO or its affiliates perform investment management and other services. Moreover, Client portfolios may include the securities of companies in which PIMCO's affiliates make a market or in which PIMCO or its affiliates, its officers and employees and its affiliates' other related persons and their officers or employees have positions.

In addition, PIMCO and its Clients may engage common legal counsel and other advisers in a particular transaction, including a transaction in which there may be conflicts of interest. Members of the law firms or

other Service Providers engaged to represent Clients may be investors in a PIMCO Fund and may also represent one or more portfolio companies or investors in a PIMCO Fund. In the event of a significant dispute or divergence of interest between PIMCO, its Clients and/or its affiliates, the parties may engage separate counsel in the sole discretion of PIMCO and its affiliates, and in litigation and other circumstances separate representation may be required.

Additionally, PIMCO, its Clients and its portfolio companies engage other common Service Providers. In certain circumstances, the Service Provider may charge varying rates or engage in different arrangements for services provided to PIMCO, its Clients, and/or the portfolio companies of a Fund. Service Providers often charge varying amounts or otherwise have different fee arrangements for different types of services provided. For instance, fees for various types of work often depend on the complexity of the matter, the expertise required, and the time demands of the Service Provider. This may result in PIMCO or its affiliates receiving a more favorable rate on services provided to it by such a common Service Provider than those payable by the Clients and/or the portfolio company, or PIMCO receiving a discount on services even though its Clients and/or the portfolio companies receive a lesser, or no, discount. This creates a conflict of interest between PIMCO, on the one hand, and its Clients and/or portfolio companies, on the other hand, in determining whether to engage such Service Providers, including the possibility that PIMCO will favor the engagement or continued engagement of such persons if it receives a benefit from such Service Providers, such as lower fees, that it would not receive absent the engagement of such Service Provider by its Clients and/or the portfolio companies.

Information Sharing. Subject to applicable legal, regulatory and contractual requirements, PIMCO, its affiliates, and certain other third parties may obtain or have access to information about Clients and their Accounts or personnel associated with an Account, including information relating to an Account's identity, transactions, and holdings. For example, PIMCO provides

such information to custodians, counterparties, and Service Providers so that they may process transactions or provide services to Accounts. In addition, and in all cases subject to a confidentiality and non-disclosure agreement, PIMCO shares Client and Account information with affiliated technology companies, HUB and Beacon Platform Inc., for the purpose of developing and testing systems and/or operating platforms that PIMCO expects to use to provide services with respect to Accounts. Although it is anticipated that such technologies will deliver operational efficiencies to Clients (among other potential benefits), this information sharing involves a conflict of interest. For example, because PIMCO has a financial interest in HUB, PIMCO is incentivized to grow and develop HUB technologies, including through the use of PIMCO Client and Account information.

In addition, PIMCO may enter into formal or informal arrangements with portfolio investments or other parties to facilitate the sharing of data and/or data analytics. This information may allow PIMCO, its Clients and/or other portfolio companies to better discern economic or other trends and developments. However, information sharing may involve conflicts of interest between Clients and/or between Clients and PIMCO. For example, data analytics based on inputs from one portfolio investment may inform business decisions by other portfolio investments, or investment decisions by PIMCO and its affiliates, without the source of the data being directly compensated.

PIMCO and its affiliates may utilize such data outside of Client activities in a manner that could provide a material benefit to PIMCO, without directly compensating or otherwise benefiting Clients. As a result, PIMCO may have an incentive to pursue investments based on the data that may be accessible as a result of owning such investments, and/or to utilize such data in a manner that benefits PIMCO and/or investments held by other Clients.

It is impractical, and in many cases impossible, to measure exactly the benefits that any individual entity may derive from access to or receipt of this type of data, or to provide for specific and direct monetary

compensation from the recipients of a particular benefit to the sources of the data or the purchasing power (as applicable) that enabled the benefit to be obtained.

Co-Investments. Although it is under no obligation to do so, PIMCO from time to time will offer co-investment opportunities to investors in its Private Funds, Clients, employees, former employees and/or to third parties (which may be unaffiliated or affiliated with PIMCO (including Allianz and its affiliates or employees), and which may include Service Providers). Participants in a co-investment may be required to pay carried interest and fees (including management, administration fees, and placement fees and similar compensation) in connection with such co-investment (and, for the avoidance of doubt, any such fees or amounts are not considered transaction fees and will not or otherwise offset any fees or carried interest payable to PIMCO or its affiliates). The terms and conditions of any such co-investment may vary among the co-investors. Co-investments are subject to PIMCO's non-standard transaction, allocation, and other policies and procedures.

Subject to the relevant Private Fund's governing and offering documents and any contractual co-investment requirements or rights, co-investment opportunities will be allocated as determined by PIMCO in its sole discretion, and any such allocations as between investors may not correspond to their pro rata interests in the relevant Private Fund or the size of their Accounts. In determining such allocations, PIMCO will take into account any facts or circumstances it deems appropriate, including the size of the prospective co-investor's investment in the Private Fund and any other PIMCO-advised Funds or Accounts, as well as prospective future investments therein; whether and the extent to which the prospective co-investor has expressed an interest in co-investment opportunities; PIMCO's evaluation of the financial resources, sophistication, experience and expertise of the potential co-investor, with respect to the execution of co-investment transactions generally, and with respect to the geographic location or business activities of the applicable co-investment opportunity;

perception of past experiences and relationships with each prospective co-investor; whether or not such person has co-invested previously and the ability of any such co-investor to respond promptly and appropriately to potential investment opportunities; perception of the legal, regulatory, reporting, public relations, competitive, confidentiality or other issues that could potentially arise with respect to any prospective co-investor (including whether the prospective co-investor has a complicated tax structure that would require particular structuring implementation or covenants that would not otherwise be required and any interests a prospective co-investor has in any competitors of the portfolio investment); and any strategic value or other benefit to PIMCO or its affiliates resulting from offering such co-investment opportunity to a prospective co-investor, including potential benefits to the growth of PIMCO or its affiliates' franchise and whether the prospective co-investor has demonstrated a long-term and/or continuing commitment to the potential success of the Fund, PIMCO and/or its affiliates.

Co-investment opportunities may also be provided to existing or new investors into PIMCO-advised Funds or Accounts. Subject to any specific agreements to the contrary, PIMCO may use co-investment opportunities to benefit the growth of its franchise PIMCO expects to grant certain investors a priority right to participate in co-investment opportunities. The existence of such priority co-investment rights could result in other investors receiving fewer or no co-investment opportunities.

Co-investments result in conflicts between a Fund and other co-investors, some of whom may be investors in the Fund (for example, over the price and other terms of such investment, exit strategies and related matters, including the exercise of remedies of their respective investments). Furthermore, to the extent that a Fund holds interests that are different (or more senior) than those held by such other co-investors, PIMCO may be presented with decisions involving circumstances where the interests of such co-investors are in conflict with those of the Fund. To the extent any affiliate or employee

of PIMCO (including Allianz SE and its affiliates or employees) co-invests with a Fund, such conflicts will be heightened. For example, the PIMCO may be incentivized to resolve conflicts in favor of an affiliate that pays higher fees to PIMCO or that PIMCO views as strategically important.

Further, because co-investors may not be identified and/or may not agree to invest until relatively late in the investment process, or for other reasons, co-investors may not bear their proportionate share of investment-related expenses (including "broken deal" expenses). In certain cases, where permitted by the governing documents, an Account may be required to bear all of the "broken deal," "dead deal" or diligence expenses related to unsuccessful co-investment opportunities, as well as the organizational expenses of a related co-investment vehicle. If a proposed transaction is not consummated, no such co-investment vehicle generally will have been formed, and the full amount of any expenses relating to such proposed but not consummated transaction ("Dead Deal Costs") would therefore be borne by the Fund or funds selected by PIMCO as proposed investors for such proposed transaction. Furthermore, even if a proposed transaction is not consummated and a co-investment vehicle has been formed for the purpose of making an investment in such proposed transaction (or co-investors have otherwise committed to invest in the proposed transactions), some or all of the Dead Deal Costs may, where permitted by the applicable governing documents, nevertheless be borne solely by a Fund or funds selected by PIMCO as proposed investors for such proposed transaction. Similarly, co-investment vehicles (and co-investors) are not typically allocated any share of break-up fees received in connection with such an unconsummated transaction.

In respect of certain co-investments, a Fund may be required to incur indemnification or other obligations that are joint and several in nature, including when one or more co-investors does not (for legal, regulatory, commercial or other reasons) incur such obligations. In such cases, the Fund may need to seek recourse from its

co-investors for their respective shares of such obligations and may not always be successful in doing so.

On occasion, a Private Fund or other Account will “warehouse” an investment whereby it acquires more of an investment than it otherwise would have on behalf of a co-investor in anticipation of a future transfer to such co-investor. The co-investor will, but not always, pay a financing fee or similar compensation in respect of such arrangement in such cases.

There can be no assurance that PIMCO will be successful in offering a co-investment opportunity to a potential co-investor, in whole or in part, that the closing of such co-investment will be consummated in a timely manner, that the co-investment will take place on terms and conditions that will be preferable for a Fund or that expenses incurred by a Fund with respect to the syndication of the co-investment will not be substantial. In the event that PIMCO is not successful in offering a co-investment opportunity to potential co-investors, in whole or in part, a Fund or Account will hold a greater concentration and have exposure in the related investment opportunity than was initially intended, which could make the Fund or Account more susceptible to fluctuations in value resulting from adverse economic and/or business conditions with respect thereto. PIMCO has adopted policies and procedures otherwise designed to manage or mitigate such conflicts.

To the extent a co-investor is an affiliate, employee, client or strategic partner of, or otherwise has a relationship with, PIMCO or its affiliates, the conflicts of interest described herein will be elevated. For instance, PIMCO may be incentivized to allocate co-investment expenses to the Fund instead of such co-investor.

Consistent with PIMCO’s policies and procedures, the determination of whether a particular transaction represents a co-investment opportunity is often subjective. PIMCO will determine whether investments represent co-investment opportunities, including for purposes of interpreting any priority or other co-investment rights, in its sole discretion.

Investments in Affiliated Funds. As noted above, if permitted by the relevant investment guidelines and applicable law, we purchase for Accounts (including Wrap Program Accounts) interests in PIMCO Funds or vehicles that are offered by PIMCO or its affiliates for short-term investment purposes (i.e., a cash management vehicle), as part of the Account’s investment strategy, or when we otherwise believe it is in the relevant Client’s best interest to do so. The details of any fee offsets, rebates or other reduction arrangements in connection with such investments are provided in the documentation relating to the relevant Account and/or underlying fund or vehicle. Wrap Program Clients should be aware that fee offsets are not always offered including but not limited to situations where the Sponsor, or another manager within the Wrap Program, elects to invest in certain PIMCO-affiliated funds.

In choosing between funds and managers affiliated with PIMCO, including the Investment Adviser Affiliates, and those not affiliated with PIMCO, we will have a financial incentive to choose PIMCO-affiliated funds and managers over third parties by reason of the additional investment management, advisory and other fees or compensation we or our affiliates may earn. Under certain conditions, we may offset, rebate or otherwise reduce our fees or other compensation with respect to investments in PIMCO-affiliated funds and managers; however, this reduction or rebate, if available, will not necessarily eliminate the conflict, and PIMCO will nevertheless have a financial incentive to favor investments in PIMCO-affiliated funds and managers (for example, to increase the assets under management of, or otherwise provide support to, certain funds, products or lines of business). Furthermore, although we may be permitted to invest in PIMCO-affiliated funds, Clients should not expect us to have better information with respect to such PIMCO-affiliated funds than other investors have. Even if we have such information, we may not be permitted to act upon it in a way that disadvantages the other investors in such funds.

As noted in Item 4, “Wrap and Similar Program Services,” a Wrap Program Client or Sponsor may authorize PIMCO

to invest in the PIMCO ETF for cash management purposes. To the extent a Sponsor or Client has provided such authorization and the Client's Account invests in the PIMCO ETF, the Client will bear the fees and expenses of the PIMCO ETF in addition to the fees and expenses the Client pays for the management of the Client's Account, and the PIMCO ETF's fees will include fees that are paid to PIMCO for services PIMCO provides to the PIMCO ETF. PIMCO's authority to invest Wrap Program Client assets in the PIMCO ETF creates conflicts of interest. For example, investing in the PIMCO ETF will cause a Wrap Program Client to incur higher fees and cause PIMCO to receive greater compensation and increase assets under management of the PIMCO ETF.

Expenses. The appropriate allocation of fees and expenses among Clients will often be unclear and require the exercise of discretion. In certain circumstances, a Client will bear expenses related to investments that it does not consummate; such investments may ultimately be made by other Clients, which in certain circumstances will not reimburse the Client initially bearing such expenses. While PIMCO has adopted policies and procedures designed to fairly and equitably allocate expenses, PIMCO will be subject to conflicts of interest in making such determinations, and there can be no assurance that errors will not arise in such allocations, or that any allocations (i) will reflect a Client's pro rata share of such expenses based on the amounts invested (or anticipated to be invested)/market value of the investment held (or anticipated to be held) by each Client; or (ii) be in proportion to the number of participating Clients or the proportion of time spent on each Client, or that such allocations will not confer an economic benefit on other entities at a Client's expense. For example, PIMCO will have an incentive to allocate expenses to a Client that does not pay incentive compensation.

In addition, PIMCO or its affiliates may receive management consulting fees, investment banking fees, advisory fees, breakup fees, servicing fees, directors' fees, closing fees, transaction fees related to the negotiation of the acquisition of a portfolio investment and similar

fees (including interest, commitments or other fees received in connection with a bridge financing), whether in cash or in kind, including options, warrants and other non-cash consideration by any third-party in connection with certain Clients' actual or contemplated investments (collectively, "Special Fees") provided that, in each case, Special Fees will not include any amounts paid as reimbursement for out-of-pocket expenses incurred in connection with providing services in respect of which such Special Fees were paid or any amounts paid to Service Providers. Special Fees are generally allocated among Clients participating in the applicable investment. Certain Clients or investors may be entitled to apply all or a portion of Special Fees allocated to them to reduce management fees otherwise payable to PIMCO. Special Fees not allocated to a participating Client or allocated to a Client without a management fee offset, will be retained by PIMCO or its affiliates, as applicable.

From time to time, PIMCO or its affiliates, will compensate financial firms or their affiliated companies for certain services, including technology, operations, tax or audit consulting services, or may pay or reimburse financial firms for certain technology enhancements relevant to selling or servicing the Funds, and will pay such firms for permitting PIMCO to attend investment forums and conferences sponsored by such consultants, or for access to studies, surveys, industry data, research and access to information about, and contact information for, particular financial advisors who have sold, or may in the future sell, shares of the Registered Funds (i.e., "leads"). If permitted by an Account's documentation or organizational documents, PIMCO may cause a Client to pay for these services.

The determination of whether an expense (for instance, the fees and expenses of consultants, contract employees, outside legal counsel and temporary employees (as well as secondees and any of the foregoing) who work on Client-related matters) is appropriately borne by the Client or PIMCO often cannot be resolved by reference to a pre-existing formula and will require the exercise of discretion, and PIMCO will be subject to conflicts of interest in making such

determinations. In particular, PIMCO will be incentivized to (i) classify expenses as borne by a Client as opposed to PIMCO and (ii) decrease the level or quality of third-party services provided to a Client to the extent such services are paid for by PIMCO. PIMCO has adopted policies and procedures designed to mitigate this conflict.

For administrative and other reasons, PIMCO may (i) cause one or more Clients to be invoiced for, advance or otherwise bear on a temporary basis all or a portion of an expense ultimately intended to be borne in whole or in part by another Client and/or (ii) make corrective allocations of expenses among Clients to reflect their appropriate share of such expenses. Such measures generally will not include the imposition of an interest charge or other payments designed to compensate (whether for time value, opportunity cost or otherwise) a particular Client for temporarily bearing a disproportionate share of expenses.

PIMCO may determine it is appropriate to forego certain amounts otherwise payable to an Account if the costs of continuing the Account (e.g., tax reporting expenses) exceed the amounts payable to the Account, or if the PIMCO determines that the likelihood of receiving such amounts is low, or the length of time it would take to receive such amounts does not justify the costs of continuing the Account. In addition, to the extent permitted by applicable law, for similar reasons, PIMCO may determine to liquidate an Account prior to the receipt of amounts payable to the Account, and if such amounts are received following the complete liquidation of the Account, PIMCO will determine in good faith how to dispose of such amounts (which may include donating such amounts to charity). Similar conditions may apply with respect to any liquidating trust or other vehicle established by an Account in connection with dissolving the Account.

An Account, PIMCO, its affiliates and each of their respective direct and indirect partners, members, managers, officers, directors, employees and agents may become involved in litigation or regulatory inquiries because of their connection to Account activities. Such involvement could, by way of example and without

limitation, involve litigation with third parties (including limited partners, co-investors, owners and other stakeholders of portfolio investments and entities in which an investment was contemplated but not ultimately consummated) and where an Account, PIMCO and/or its affiliates may be named as defendants, formal and informal proceedings related to litigation (including being called as a witness, being deposed and being required to comply with extensive document production requests) or investigations by regulators in connection with the Account's investment activities or matters involving actual or potential investments. The risk of litigation with third parties will be elevated in situations where an Account exercises control or significant influence over an issuer's direction, including where the Account owns or is otherwise affiliated with a loan servicer or originator, becomes involved in official or unofficial creditor committees or becomes involved in activities that may be considered hostile in nature to an issuer. Any expense incurred in connection with any actual or potential third-party claims or litigation, regulatory inquiries or any other of the foregoing, including any settlement, disgorgement or judgment, as well as fees and expenses associated with engaging experts and other providers in connection with such matters, will generally be borne by the Account. Such expenses would reduce net assets of the Account. In addition, an Account's investment activities may subject it to certain risks inherent in restructuring, bankruptcy and similar proceedings.

Intangible and Other Benefits. PIMCO and its personnel can be expected to receive certain intangible and/or other benefits arising or resulting from their activities on behalf of Clients that will not be offset by fee reductions or otherwise shared with Clients, investors and/or portfolio companies. For example, airline travel or hotel stays incurred as Client expenses may result in "miles" or "points" or credit in loyalty/status programs, and such benefits and/or amounts will, whether or not de minimis or difficult to value, inure exclusively to PIMCO and/or such personnel (and not the Clients, investors and/or portfolio companies) even though the cost of the underlying service is borne by the Clients, investors

and/or portfolio companies. In addition, PIMCO and its personnel and/or other affiliates may, in certain instances, receive discounts on products and services provided by portfolio companies owned by Funds managed by PIMCO and/or the customers or suppliers of such portfolio companies.

Managing Proprietary Capital. We generally do not actively trade or manage assets on our own behalf. However, we manage assets for our affiliates, including, as noted above in Item 10, insurance and other assets of our indirect parent company, Allianz and other Allianz affiliates. In addition, our affiliates trade or manage assets on their own behalf. Subject to applicable legal requirements, PIMCO employees are generally permitted to invest in certain Clients and Affiliate Clients. From time to time, we buy or sell the same securities and products for Affiliate Clients that we also buy or sell for our Clients, or we pursue investment strategies for our Affiliate Clients that are the same as those of our Clients. We serve as investment adviser to certain Funds and Model Portfolios where PIMCO, our employees, or an affiliate provides the initial investment, or seed capital. As described in Item 5, "Fees and Compensation" fees paid to PIMCO, including by seed investors, may be waived, modified, rebated or reduced, or calculated differently with respect to an investor, as determined by PIMCO in its discretion. Please refer to "Investments By PIMCO, Our Employees and Affiliates" for additional information. We also from time to time recommend to or purchase or sell on behalf of Clients, certain Private Funds in which PIMCO, our affiliates or other related persons serve as the general partner, managing member, or trustee to the fund. We may hedge the exposure of affiliated investments in Private Funds to the extent we manage such affiliates' assets, by trading in other Private Funds or affiliated Accounts or through other methods. The foregoing activities give rise to a potential conflict of interest in the allocation of investment opportunities (such as limited offerings) as between our Affiliate Clients and our Accounts. As previously described, we have adopted trade allocation policies and procedures that seek to ensure that all Clients are treated fairly and equitably over time. Additionally, in connection with our

employee benefits plans, certain PIMCO employees, or employees of our affiliates, hold interests in funds that we recommend to or purchase or sell on behalf of Clients.

Related Persons. PIMCO is a related person of Allianz, our indirect parent, and as such, under certain circumstances may be restricted from entering into agency and other transactions with affiliates of Allianz. PIMCO has undertaken certain procedures to identify broker-dealers affiliated with Allianz and certain affiliates of Allianz. For certain of our Clients, PIMCO also adopted a policy to generally prevent the purchase of securities that have been issued by Allianz, its insurance company subsidiaries, or any control affiliate. Other Clients may, however, transact with Allianz and such subsidiaries and affiliates in connection with their investment activities, including their investments in insurance-linked instruments and other insurance-related transactions, and these transactions will give rise to various conflicts of interest. In addition, PIMCO may be restricted from making certain investments on behalf of some (but not necessarily all) Clients as a result of these affiliations or as a result of PIMCO or its Clients owning a certain percentage of an underlying issuer. PIMCO may also be subject to additional restrictions based upon the particular characteristics of the Account. In addition, these affiliates may take actions, on their own behalf or on behalf of their clients or other related persons, which are adverse to our Clients (including many of the actions discussed above). PIMCO will typically not have any advance knowledge of these actions by its affiliates and, even if it does, will typically not have any ability to influence its affiliates' actions.

Cross Trades. In an effort to reduce transaction costs, increase execution efficiency, and capitalize on timing opportunities, PIMCO and its affiliates are likely to execute cross trades, or sell a security or other instrument for one of its or their Clients to another Client without the use of a broker-dealer.

PIMCO will perform a cross trade only when it complies with its cross-trade policies and procedures, when it is not prohibited under the applicable Client's investment

restrictions or applicable law, and when we believe it is in the best interests of both the selling Account and the buying Account. However, cross trades present an inherent conflict of interest because PIMCO or its affiliates represent the interests of both the selling party and the buying party in the same transaction. As a result, Clients for whom we execute cross trades bear the risk that one or more Clients or Affiliate Clients in the cross trade may be treated more favorably by us than another party, particularly in cases where a party pays us a higher management or performance-based fee or allocation. Additionally, there is a risk that the price of a security or other instrument bought or sold through a cross trade may not be as favorable as it might have been had the trade been executed in the open market or that a Client receives a security that is difficult to dispose of in a market transaction. This could happen, for example, if market quotations used to determine the cross-trade price do not reflect the price that would be obtained in an actual market transaction. The identities of the parties engaging in a cross trade generally will be reported to any registered investment company that also participates in that cross trade.

Under certain circumstances set forth in our policies we are likely to execute cross trades on behalf of our Private Funds in securities or other assets that may be illiquid and difficult to value; while PIMCO may (but is not required to) engage an independent valuation firm selected by PIMCO that would either value such investments or review PIMCO's valuations, there can be no assurance that such valuations will be utilized or accurate. In addition, PIMCO may be incentivized to have an Account engage in cross trades to enable the Account or another PIMCO Client to liquidate in a timely manner, including to forego the expenses and other matters associated with such entity's continuing operations that might otherwise be borne by PIMCO.

To address these and other concerns associated with cross trades, our policies generally require that cross trades be affected at the independent "current market price" of the security or other instrument, as determined by reference to independent third-party sources, and

that we will execute cross trades only in the best interests of both the buying Account and the selling Account.

For regulatory or other reasons, PIMCO may choose not to execute cross trades for an Account, which could disadvantage the Account as compared to funds or affiliated clients for whom PIMCO performs cross trades. Under our policies, cross trades are not permitted in Accounts that are subject to ERISA except pursuant to PIMCO's individual exemption from the Department of Labor that permits the in-kind purchase of Fund shares by an ERISA Client Account or pursuant to another prohibited transaction exemption or applicable rule or regulation. We may not engage in cross trades for Accounts in which we act as principal in the transaction without appropriate consent.

For regulatory or other reasons, we may choose not to execute cross trades for one or more Clients, which could disadvantage those Clients as compared to Clients for whom we perform cross trades.

In certain limited circumstances, with client consent and if permitted by and in accordance with applicable law, we will engage in principal trades between PIMCO affiliated entities, including Allianz and its affiliates, and PIMCO Clients, including buying securities and other investments as principal from, and selling securities and other investments as principal to, an Account. PIMCO and its affiliates may retain any profits that they make in such transactions. PIMCO and its affiliates may also act as broker or agent for such transactions and receive and retain fees in connection therewith without offsetting other fees paid to PIMCO or its affiliates. These other relationships may also result in securities laws restrictions on transactions in these instruments by an Account and otherwise create potential conflicts of interest for PIMCO.

Risk Retention Requirements. Certain Account investments (including investments which the Account, PIMCO and/or their respective affiliates create or otherwise sponsor) may be subject to certain risk retention requirements, which may be satisfied (directly or indirectly) by the Account, its affiliates and/or third parties. In addition, certain Accounts are expected to invest in, sponsor or create funds, vehicles, investment

structures, capitalized manager vehicles and/or other opportunities intended to provide financing or other support to sponsors and other eligible risk retainers (including PIMCO and/or its affiliates); PIMCO, its affiliates, other PIMCO clients and/or their affiliates are expected to also invest in such funds, vehicles, investment structures, capitalized manager vehicles and/or other opportunities.

Allocation of PIMCO Resources. In order for us to adhere to applicable fiduciary obligations to our Clients as well as to address and/or mitigate conflicts of interest or regulatory issues, it may not be possible or appropriate to make available all of our resources that might be relevant to particular investment decisions by the investment professionals responsible for a particular portfolio or investment program. Such restrictions could result in such investment professionals making investment or other decisions for a particular portfolio or investment program that are different from the decisions they would make if there were no such limits or restrictions. Although our personnel will devote as much time to each portfolio and investment program as we deem appropriate, they will have conflicts in allocating their time and services among each portfolio and investment program and the other Clients or Affiliate Clients now or in the future advised by us and/or our affiliates. Our personnel will also have ownership or other interests in other Accounts as well as other outside interests, all of which may influence their decisions on Account-related matters.

To the extent that PIMCO receives performance fees or allocations from a Client or otherwise receives higher performance fees or allocations or investment management fees than it does with respect to Clients generally, PIMCO will have an economic incentive to allocate additional resources or investment professionals to such Client and, to the extent such resources are limited, away from other Clients.

PI registered representatives receive differing levels of compensation from the sale of various products (including Wrap Programs), which may create potential conflicts of interest.

Under policies applicable to all registered representatives of PI, no registered representative is permitted to recommend one Fund or Wrap Program over another solely because the recommended Fund or Wrap Program will provide higher revenue or compensation to PIMCO, PI, or to the registered representative.

On occasion PIMCO will retain third parties, such as accountants, administrators, lenders, bankers, brokers, attorneys, consultants and independent contractors to provide services to Clients. These services may relate to sourcing, conducting due diligence on or developing potential investments, as well as structuring, valuing, modeling, managing, monitoring and disposing of investments. Some consultants or independent contractors that PIMCO hires may have general industry and/or regional expertise, and may serve on the boards of directors of, or in other capacities at, portfolio companies. These consultants may have close business or personal relationships with PIMCO. PIMCO may also utilize other similar consultants with, for example, more narrow expertise in a particular field. Such consultants and contractors may have tailored compensation arrangements specific to their engagement. They may, for example, receive compensation in multiple forms, depending on their individual arrangement and the services they provide, including cash payments from PIMCO or its affiliates, a Client or Affiliate Client or a portfolio company, carried interest payments, profit interests in a portfolio company, equity or stock option grants from a portfolio company, and/or fees relating to a particular transaction. As independent contractors, such consultants are generally not affiliates or employees of PIMCO and therefore would not generally be subject to certain restrictions and conditions in a Client's or Account's governing documents that relate specifically to employees and affiliates of PIMCO.

Furthermore, in some cases, PIMCO hires third-party Service Providers, including PIMCO Aurora, to perform services that PIMCO's employees could also provide or have in the past provided. Determining whether to engage a Service Provider or a PIMCO employee gives rise to conflicts of interest. For example, in some

situations, PIMCO will have an incentive to retain Service Providers rather than hire additional employees and/or to outsource to Service Providers functions that our employees could perform or have previously performed.

Personal Relationships with Persons at other Financial Services Firms and Companies. PIMCO seeks to avoid potential conflicts of interest arising from personal relationships employees may have with individuals at other financial services firms. PIMCO's policies and procedures require employees to disclose such relationships and prohibit employees from allowing personal relationships to influence any work-related recommendations or decisions for Clients, including decisions to select broker-dealers.

Certain personnel and other professionals of PIMCO have friends or relatives that are actively involved in industries and sectors in which an Account invests or has business, personal, financial or other relationships with companies in such industries and sectors. For example, such friends or relatives might be officers, directors, personnel or owners of companies or assets, which are actual or potential investments of an Account, Service Providers to the Account or other counterparties of an Account. Any transactions involving such persons will give rise to conflicts of interest; for instance, PIMCO may be less incentivized to negotiate or pursue enforcement measures against such persons and/or the associated entities and may be more incentivized to engage or transact with such persons and/or the associated entities and to provide them with favorable fee, compensation or other economic terms.

Investments By PIMCO, Our Employees and Affiliates.

Certain of our qualified employees and affiliates invest in certain vehicles managed by us (or our affiliates) either through general partner entities or as limited partners, shareholders or otherwise. Such investments may represent a "seed investment" and/or significant amount of these vehicles. These vehicles may in their discretion reduce all or a portion of the management fee, performance allocation, or other costs and expenses related to the investments held by such persons. In addition, such vehicles, especially those with particularly

high concentrations of employees, give rise to potential conflicts of interest, including by creating a heightened incentive to allocate investment opportunities to, and expenses away from, such vehicles.

In addition, PIMCO and its affiliates expect to continue to sponsor and manage new investment vehicles as PIMCO and its affiliates continue to develop their investment management and related businesses, including by engaging in strategic transactions involving the acquisition of or investment in other financial services companies or investment vehicles. Strategic transactions pursued by PIMCO or its affiliates for their own accounts may overlap or compete with potential investment opportunities for PIMCO Clients and Accounts. Furthermore, any overlap among investment vehicles and businesses could give rise to additional conflicts of interest, such as those related to competition for the same or related investment opportunities, allocation of resources and competition for capital from investors.

An Account is expected to make investments involving, or engage in activities with, parties that have relationships with, or who are employed by, PIMCO, its affiliates and/or their respective personnel, including their actual or prospective clients or fund investors. For example, an Account may (directly or indirectly, including through an investment, joint venture or other instrument) make loans to such parties, or offer products or services for purchase by such parties. In addition, personnel of PIMCO or its affiliates may invest in a personal capacity alongside an Account in certain investments. Such investments and activities will involve conflicts of interest; in particular, (i) an Account may be less incentivized to negotiate transaction terms with, or exercise enforcement or default rights against, such parties and (ii) investments or other actions by an Account may, directly or indirectly, benefit such parties and/or their investments.

Certain Accounts expect to invest in funds or products advised by or affiliated with PIMCO, including those where PIMCO or an affiliate is attempting to establish new products and/or lines of business. For example, an Account may invest in a REIT or a structured investment

that is established by, and the investors of which are, one or more other PIMCO-advised funds or accounts. Such investments may involve multiple additional levels of fees and other asset-based or performance-based compensation, and PIMCO may or may not (depending on the circumstances) reduce or waive its management, administration and incentive fees or other compensation, as applicable, so that Clients do not indirectly bear the economic burden of such amounts in excess of what they would have borne if such Account were not subject to management, administrative and incentive fees, as applicable, and PIMCO will be incentivized to structure such transactions in a manner that avoids any such reduction or waiver. Even if PIMCO does reduce or waive such fees or other compensation, PIMCO may still be incentivized to invest in funds and products advised by or affiliated with PIMCO (for example, to increase the assets under management of, or otherwise provide support to, such funds, products or lines of business), and may be incentivized to delay the disposition or liquidation of such investments.

Account Capacity. Potential conflicts of interest may arise when an Account reaches its investment capacity, i.e., when it gets to a point where accepting additional Accounts or increasing Account size would not be in the best interests of existing Accounts or investors. PIMCO may have an incentive to accept additional investments to increase its assets under management and fees payable to PIMCO when doing so may not be in the best interests of Accounts or investors following a particular strategy or invested in a particular vehicle.

ITEM 12. Brokerage Practices

We have policies and procedures that are reasonably designed to ensure that our trading practices are conducted in our Clients' best interests.

PIMCO's Broker-Dealer Selection Process

An important aspect of our discretionary investment management services includes the selection of broker-dealers, as well as automated trading platforms ("ATPs"), for the execution of Client transactions. It is our policy to seek to obtain best execution on Client transactions and

to execute client trades on the most advantageous terms reasonably available under the circumstances. Best execution is not limited solely to the consideration of the lowest available price or commission rate. For example, complicated high-volume transactions in securities, derivatives, or other investments require a broker-dealer with a higher level of competence and infrastructure to help ensure Client transactions are executed without error, delay or needless expense. As a result, in seeking to obtain best execution, we take into account a number of factors and criteria, based on information available at the time, including but not limited to price of the security; any mark-up or mark-down on the security; any commission paid to the broker-dealer (including, as relevant to a particular Wrap Program, the extent to which the Wrap Program fee includes commissions or commission equivalents when executed through the Sponsor or a designated broker-dealer while transactions executed away from the Sponsor or the Sponsor's designated broker-dealer may incur these and other expenses) or fees charged by the ATP (such as access or transaction fees) similar to commissions or mark-ups; the speed and likelihood of execution within a desired time frame; characteristics of the instrument, including liquidity and the nature of the order; market conditions; the ability and willingness of a broker-dealer or ATP to execute in desired volumes; settlement considerations; responsiveness; the ability of a broker-dealer or ATP to act on a confidential basis; the ability of a broker-dealer or ATP to act with minimal market effect; the creditworthiness of a broker-dealer or ATP in relation to risk created by the transaction; the level and experience of operational coordination between the broker-dealer or ATP and PIMCO; the willingness and ability of the broker-dealer to make a market in particular securities; the broker-dealer's or ATP's reputation for ethical and trustworthy behavior; infrastructure; the willingness of a broker-dealer to commit capital to a particular transaction; the market knowledge of the broker-dealer; the ability of a broker-dealer to execute difficult transactions in unique and/or complex securities; available methods of execution, including execution venues (such as ATPs); the ability of a broker to execute

on an automated basis; the adequacy and reliability of recordkeeping; whether the broker-dealer or ATP treats PIMCO fairly in resolving disputes; any contractual arrangements with the broker-dealer or ATP; whether the broker-dealer can provide access to underwritten offerings and secondary markets; under appropriate circumstances, the availability of research and brokerage services provided by the broker-dealer; client guidelines, including broker limitations; and other considerations relevant to the execution of an order. In addition, we periodically and systematically review the execution performance of the broker-dealers and ATPs we use to execute Client trades.

Soft Dollars. Under current U.S. regulations, an investment manager may cause clients to pay a broker-dealer effecting a securities transaction a commission (which includes a markup, markdown, commission equivalent or other fee) that is higher than the commission another broker-dealer might have charged if the investment manager determines in good faith that the commission paid was reasonable given the research and/or brokerage services provided by the broker-dealer. An investment manager is typically in a position to make the necessary determination with agency transactions in equity securities and in other circumstances where there is sufficient transparency to objectively determine the transaction price and commission (e.g., where the commission and transaction price are fully and separately disclosed on the confirmation and the transaction is reported under conditions that provide independent and objective verification of the transaction price), which currently does not exist generally with principal transactions in fixed income securities.

Specifically, Section 28(e) of the Securities Exchange Act of 1934, as amended (the "1934 Act") and SEC interpretations thereunder, permits investment managers such as PIMCO to cause a Client to pay a broker-dealer a commission that is higher than another broker-dealer might have charged when the investment manager believes that is reasonable given the value of any research and/or brokerage services provided by the broker-dealer that provide lawful and appropriate

assistance to the investment manager in its investment decision-making or trade execution processes. In such circumstances, the investment manager may be deemed to be paying for such research and/or brokerage services with client commissions (sometimes called "soft dollars"). PIMCO generally does not negotiate specific soft dollar commission payment amounts with broker-dealers or have arrangements with broker-dealers under which a specified portion of a commission is set aside for PIMCO to use in paying for third-party research and/or third-party brokerage services. Nevertheless, broker-dealers may and do provide PIMCO with research and/or third-party brokerage services, including, among other things, research reports, analyses of credit, economic and market data, access to senior executives of companies, access to broker-dealer research analysts and analyst earnings estimates, which may be created or developed by the broker-dealer, including at our request. There may be circumstances where PIMCO determines that it is appropriate to use a broker-dealer that has provided research on a topic of interest or other products or services and to pay commission rates higher than those that would have been charged by other broker-dealers for the transaction or by other broker-dealers who may not offer such services. PIMCO may do this when it believes a higher commission is reasonable given the value of the research or brokerage services received. From time to time PIMCO may ask, or may accept certain offers from, brokers to arrange for meetings with senior management of corporate issuers. In such instances, PIMCO compensates the broker directly for any agreed upon costs and does not pay for such services with client commissions. In certain circumstances, our Private Funds may be permitted to pay for all or a portion of these costs directly. When PIMCO believes a number of broker-dealers are capable of providing best execution for Client transactions and PIMCO has negotiated commission rates with those broker-dealers that are similarly favorable to Clients, we may select a broker-dealer that provides us with research or brokerage services that, in our view, offers value in connection with our investment decision-making and trading processes. Research or other brokerage services received may not always be used by or for the benefit of

the Client that pays the commissions used to obtain the research or brokerage services.

In selecting broker-dealers that provide research or brokerage services that are paid for with soft dollars, potential conflicts of interest may arise between PIMCO and its Clients because PIMCO does not produce or pay for these research or brokerage services but rather uses brokerage commissions generated by Client transactions to pay for them. In these circumstances, PIMCO will have an incentive to select a broker-dealer based upon the broker dealer's research or brokerage services instead of the broker-dealer's ability to achieve best execution.

Brokerage for Client Referrals. PIMCO does not consider as a factor in selecting or recommending broker-dealers, whether it or a PIMCO affiliate receives client or investor referrals from the broker-dealer. However, PIMCO executes transactions through Wrap Program Sponsors or other broker-dealers that also bring clients to PIMCO, which incentivizes PIMCO to transact with that Sponsor or broker-dealer. Additionally, as noted below, a Client may direct PIMCO to use the services of a particular broker-dealer in executing transactions for that Client's Account. In some cases, the directed broker may have recommended PIMCO as a manager for that Account.

Directed Brokerage. Some Clients direct us to use specific broker-dealers for their Account transactions. If a Client directs us to use a specific broker-dealer, it could lose any discounts that we may negotiate on aggregated transactions, pay higher transaction costs or brokerage commissions, and be unable to achieve the most favorable execution. We typically can negotiate better prices or terms with broker-dealers when we include a Client's trade as part of a larger block of Clients trading the same security. A Client also might not be able to participate in certain investment opportunities because the Client's broker-dealer may not have access to certain securities, such as new issues or limited inventory bonds. For many securities, it is often to a Client's advantage to transact with the broker-dealer who is a known market-maker in the security. Directing us to use a particular broker-dealer might also affect the timing of a Client's

transaction. There may be times when we may not trade with a Client's directed broker-dealer until all non-directed brokerage orders are completed and this can result in the Client's order being executed on less favorable terms than we obtain for non-directed orders. In addition, not all broker-dealers have the systems or expertise to effectively process transactions that may be beneficial for an Account. An Account also may achieve lower returns compared to Accounts of Clients that do not ask us to use a specific broker-dealer. As discussed above, Wrap Program fees typically include transaction-specific commissions on agency trades executed by the Sponsor or a broker-dealer designated under the Wrap Program (i.e., such trades executed through the Sponsor or designated broker-dealer are effectively at a zero commission rate), but generally do not include dealer commissions, commission equivalents or spreads on fixed income security transactions. PIMCO will typically execute fixed income security transactions for Wrap Program Client Accounts according to its trade allocation policy and procedures, which will in most cases result in such trades being executed away from the Sponsor or its designated broker-dealer. Discretionary Wrap Program Clients generally will pay transaction-specific commissions, commission equivalents or spreads on such trades in addition to the Wrap Program fees. These transaction fees or charges may be separately charged to the Account or reflected in the security net price paid or received. Transactions in mutual fund shares purchased for Accounts will typically be submitted directly to the transfer agent or distributor of the mutual fund. To the extent PIMCO invests in securities other than fixed income securities, or mutual funds for a Discretionary Wrap Program Client, it is anticipated that PIMCO will typically affect a large percentage of those transactions for a Discretionary Wrap Program Client's Account with the Sponsor or its designated broker-dealer. In some Wrap Programs, PIMCO may be prohibited from effecting transactions away from the Sponsor or the designated broker-dealer or a Wrap Program Client may direct that the Sponsor or the designated broker-dealer be used.

Counterparty Review Process. Our Counterparty Risk Committee sets standards and criteria for the review of the creditworthiness of our counterparties. For certain NSTs (such as commercial real estate transactions) we will evaluate the creditworthiness of a counterparty in the context of the transaction rather than having the counterparty considered by the Counterparty Risk Committee. In addition to information provided by credit agencies, our team of experienced credit analysts evaluates each approved counterparty using various methods of analysis, including company visits, earnings updates, the broker-dealer's reputation, our past experience with the broker-dealer, market levels for the counterparty's debt and equity, the counterparty's liquidity and its share of market participation.

In certain limited circumstances, private credit transactions will be permitted without counterparty pre-approval by the Counterparty Risk Committee. Such transactions must adhere to specific criteria established by the Counterparty Risk Committee.

Claims Process. From time to time custodians or counterparties make claims or claim payments in connection with transactions entered into by PIMCO for an Account. Claims are typically transaction expenses assessed by custodian banks as overdraft charges or by counterparties for compensation related to the counterparty's use of funds (such as claims that result from failed or late settlement of transactions) or other related claims unique to certain markets. PIMCO addresses such claims according to standardized procedures. Any claims over \$500 at market rate are reviewed to determine the source of the charge for appropriate resolution, but a fail or claim under \$500 at market rate will not generally be reviewed unless PIMCO determines it is appropriate under the circumstances and consistent with applicable law. From time-to-time PIMCO will reimburse an Account for claims under \$500, such as when PIMCO has reviewed and determined that it is responsible for the fail or claim but is under no obligation to conduct such review, and for ERISA accounts on claims under \$500 and greater than \$15 regardless of fault. Similarly, PIMCO will generally not

seek to recover on defaulted securities guaranteed by an agency or instrumentality of the U.S. government if the expected recovery is less than \$500.

The European Union has adopted the CSDR settlement regime. If in-scope transactions are subject to additional expenses and penalties as a consequence of the CSDR settlement discipline regime, such expenses and penalties may be charged to the Account depending upon their characterization. For additional information regarding CSDR, please see Item 8, "CSDR Related Risks."

Foreign Currency Transactions. In managing an Account PIMCO may engage in foreign currency transactions consistent with a Client's investment guidelines or instructions to PIMCO. Where available, we believe it is in a Client's best interests to deal directly with a broker-dealer; however, third-party transactions may not be available for certain emerging market or certain restricted foreign currencies. In these instances, we may trade foreign currency through a Client's custodian via fax and/or standing instructions. Where a Client has delegated responsibility for cash management of their Account to their custodian, including for cash sweeps and FX transactions, PIMCO has no role in and no control over executions, and clients may not receive the same execution as they do for other transactions in their Account. Clients should contact their custodians directly for this information.

Aggregation of Orders

Please see Item 11, "Code of Ethics, Participation or Interest in Client Transactions and Personal Trading," for a discussion of our trade aggregation policies.

Trade Errors. PIMCO has policies and procedures that address identification and correction of errors that may occur in connection with PIMCO's management of Accounts and PIMCO Funds ("Trade Errors"), consistent with applicable standards of care and any relevant governing documents. Not all mistakes or errors that are caused by PIMCO will be considered Trade Errors, and not all Trade Errors will be considered compensable to the Account or PIMCO Fund. PIMCO makes its determinations regarding Trade Errors pursuant to its

policies and procedures on a case-by-case basis, in its discretion. PIMCO's discretion with respect to the identification, resolution and notification of Trade Errors is a conflict of interest which may be resolved in a manner adverse to a Client.

PIMCO's policies and procedures generally do not require perfect implementation of investment management decisions, trading, processing or other functions performed by the Adviser. Generally, errors in judgment in making investment decisions for clients—which include errors in securities analysis and, for quantitative/systematic strategies, System Incidents (as defined above), including errors in writing computer code or other model construction and implementation activities that relate to the process by which investment decisions are made for an Account (i.e., errors that reflect subjective judgments or mistakes made at the time of developing, testing or implementing a System or Systems or mistakes that concern the process of constructing an investment strategy)—are not considered to be Trade Errors. Similarly, errors in process or other mistakes in implementation will not generally constitute compensable Trade Errors, including, without limitation: (i) an incorrect trade order that is identified and corrected prior to settlement or otherwise corrected in a manner that does not harm a Client; (ii) an error that is the fault of an executing broker-dealer, custodian, or counterparty or other third-party (irrespective of whether PIMCO seeks compensation on behalf of the Client from such parties); (iii) a purchase or sale of a security or financial instrument that violates restrictions arising from a contractual obligation to a third-party other than the applicable Client; (iv) an incorrect over- or under-allocation of an investment to a Client that does not otherwise violate that Client's investment guidelines or that is otherwise corrected without harming a Client; (v) an error that does not result in a transaction in a Client Account (such as an error that results in the loss of an investment opportunity); (vi) an investment that does not perform favorably but otherwise complies with applicable contractual requirements; (vii) errors that PIMCO cures in accordance with express provisions in an applicable Account's governing documents; (viii) errors resulting

from unavailability of (or disruptions in) electronic services or other force majeure events; (ix) the purchase of a security for which a Client is ineligible under the issuer's prospectus, offering documents or other issuer-related rules; and/or (x) a failure to follow any formal or informal internal targets, risk or other internal guidelines, or other parameters that may be used to manage risk or otherwise guide decision-making by investment professionals.

When PIMCO determines that a Trade Error has occurred for which reimbursement is appropriate, the Account or PIMCO Fund will be compensated as determined by PIMCO in its discretion. Resolution of Trade Errors may include, but is not limited to, permitting Accounts and PIMCO Funds to retain gains or reimbursing Accounts or PIMCO Funds for losses resulting from the Trade Error. The calculation of the amount of any gain or loss will depend on the particular facts surrounding the Trade Error, and the methodology used by PIMCO to calculate gain or loss (for example, with respect to the payment of interest) may differ based on the facts and circumstances and type of Client, regulatory or other reasons, even for the same error or errors that otherwise appear similar. Compensation is generally expected to be limited to direct and actual out-of-pocket monetary losses (in certain circumstances, net of any associated gains) and will not include any amounts that PIMCO deems to be uncertain or speculative, nor will it cover investment losses not caused by the Trade Error or other opportunity costs. With respect to errors in PIMCO's trade allocation process, whether the result of a System Incident or otherwise, PIMCO will generally seek to take steps it deems appropriate to achieve the intended allocation; however, PIMCO may determine that such intended allocation is no longer possible or desirable. Accounts will bear the economic impact, if any, associated with any change to the allocation, subject to PIMCO satisfying its standard of care. Please see Item 11, "Code of Ethics, Participation Or Interest In Client Transactions and Personal Trading," for additional information on PIMCO's trade allocation process. Clients will not always be notified of Trade Errors or circumstances that might be considered Trade Errors.

ITEM 13. Review Of Accounts

PIMCO strives to ensure compliance with a Client's investment guidelines consistent with its fiduciary responsibility to manage the Client's portfolio in the best interest of the Client. Accordingly, PIMCO maintains a proprietary compliance system that captures the investment parameters from each Client's guidelines and facilitates automated pre-allocation and post-trade testing for compliance with those parameters. Manual reviews are also performed on a periodic basis for those investment guidelines that cannot be tested automatically. For certain transactions in Accounts, PIMCO will test for compliance on a pre-trade basis and the trader may not immediately execute the relevant transaction. In these instances, to the extent an Account receives compliance approval to participate in the transaction, such approval will be effective for the remainder of the trading day. PIMCO's account managers also work closely with the portfolio management team to make sure each Client's guidelines are implemented where applicable. As part of the review process, account managers or product managers review key risk characteristics (e.g., portfolio duration) across all of their portfolios for consistency as compared with firm-wide targets for each of our investment strategies and discuss any potential issues with the relevant portfolio managers. Certain aspects or portions of Client guidelines will be subject to reasonable interpretation by PIMCO, and PIMCO may revise such interpretations from time to time based on a variety of factors, including but not limited to changes to market practices or internal or external market or trading conventions, the availability of information, or changes in applicable law. Such interpretations create potential conflicts of interest because of the effect an interpretation may have on PIMCO's ability to invest in certain securities on behalf of a Client's Account and/or with respect to guideline compliance. PIMCO has implemented processes that are designed to help appropriately mitigate conflicts of interest with respect to guideline interpretations that PIMCO makes on behalf of Client accounts.

Reviews of Accounts also occur when investment strategies and objectives are changed by the Client or PIMCO and when significant events occur that are expected to affect the value of the Accounts. PIMCO typically furnishes to Separate Account Clients written quarterly reports concerning their Accounts. Separate Account reports may include a detailed inventory of all holdings, a performance summary, a written review of past and present strategy together with a current economic forecast and statistical portfolio analyses. Monthly accounting reports are also provided upon request by Separate Account Clients. From time to time, certain Clients request that PIMCO monitor for gain/loss requirements in their Accounts. PIMCO will undertake reasonable efforts to monitor for such activity; however, because PIMCO is not the official accounting agent for any Account, any such calculations have inherent limitations and may differ from the records of a Client's accounting agent.

In situations where PIMCO acts as a myTDF Manager, plan participant accounts will be reviewed on such frequency as PIMCO, and the applicable plan provider may agree from time to time. For the avoidance of doubt, the foregoing does not apply where a third-party acts as a myTDF Manager. In those cases, PIMCO does not provide any fiduciary services.

For Wrap Program Clients, Account reviews and reports may differ and are discussed in Item 4.

ITEM 14. Client Referrals And Other Compensation

Compensation from Non-Clients

From time to time, PIMCO engages consultants for investment-related consulting services, including in connection with the identification, analysis and execution of investment opportunities or to provide overall strategic guidance for certain Clients. These consulting firms may include our Clients or their affiliates. We may execute brokerage transactions for our Clients or engage in other transactions with such investment consultants or their affiliates, and consultants or their affiliates may invest in our Funds or other Accounts with us. These consultants or

their affiliates may, in the ordinary course of their business, recommend that their clients ("Consultant Clients") hire us or invest in products that we, or one of our affiliates, sponsor. In some circumstances, a Consultant Client might not compensate PIMCO directly. Rather, PIMCO may be compensated by the Consultant Client's investment consultant or its affiliates out of fees paid by the Consultant Client to the consultant or its affiliates.

Referral and Other Compensation Arrangements

Although not a general practice, PIMCO, from time to time, pays compensation for client referrals. To the extent required by law, we require that the person referring a client to us (the "Referral Agent") enter into a written agreement with us. Under this written agreement, the Referral Agent would be obligated to provide the prospective client with a separate disclosure document before an Account is opened for such prospective client that is designed to be consistent with the requirements of the SEC Marketing Rule. This separate disclosure document provides the prospective client with information regarding the nature of our relationship with the Referral Agent and any referral fees we pay to such Referral Agent. Referral fees are paid by PIMCO and not by our clients.

PIMCO employees and employees of affiliates of PIMCO, as well as persons unaffiliated with PIMCO, may serve as Referral Agents and may be compensated by us or our affiliates for referral activities. However, when our employees or affiliates serve as Referral Agents, we will not necessarily provide the separate disclosure document mentioned above. Similarly, PIMCO employees may serve as Referral Agents for certain of PIMCO's affiliates.

PIMCO, the Registered Funds (with respect to fees payable in connection with plans adopted pursuant to or in accordance with Rule 12b-1 under the 1940 Act only) and/or PI may also pay various fees to broker-dealers and other financial intermediaries that provide distribution and other services related to such funds, including but not limited to distribution and servicing fees payable in connection with plans adopted pursuant to or in accordance with Rule 12b-1 under the 1940 Act, upfront commissions on sales of certain classes of the

Registered Funds, administrative, recordkeeping, sub-accounting and/or networking fees, marketing support payments, platform payments (see below), and payments in support of training and educational seminars sponsored by such financial intermediaries, as well as occasional tickets to events or other entertainment, meals, as well as small gifts to such firms' representatives and charitable contributions to charitable organizations to the extent permitted by applicable law, rules and regulations. Furthermore, PIMCO and/or PI may pay investment consultants or their affiliated companies for certain services including technology, operations, tax, or audit consulting services and may pay such firms for PI's attendance at investment forums sponsored by such firms. PIMCO and/or PI may also pay intermediaries for various studies, surveys, industry data, research and leads. PIMCO and/or PI may pay intermediaries to make available on their platforms or affiliated platforms certain Model Portfolios. PIMCO and/or PI may pay or reimburse intermediaries for certain technology enhancements relevant to selling or servicing the Funds and Model Portfolios. Certain of the technology payments may be described as "platform payments." These payments may be used for an intermediary's development, maintenance and availability of services including, but not limited to, platform education and communications, relationship management support, development to support new or changing products, trading platforms and related infrastructure/technology and/or legal risk management and regulatory compliance infrastructure in support of investment-related products, programs and services.

In addition, PIMCO and/or PI may also make payments to intermediaries in connection with certain transaction fees (also referred to as "ticket charges") incurred by such intermediaries. A more complete description of the additional payments made by PIMCO and/or PI in connection with the Registered Funds is available in the Registered Funds' prospectuses. Additionally, a Private Fund may contract with one or more broker-dealers or placement agents to assist in the placement of interests in such Private Fund. Information about any such engagement, including the compensation payable by PIMCO, PI and/ or the Private Fund to the broker-dealer or

placement agent, is disclosed in the Private Fund's offering documents or is otherwise disclosed to the relevant investors. For certain financial intermediaries who receive or whose clients receive Model Portfolios, PIMCO may make payments to such intermediaries related to set-up, maintenance, servicing, marketing, support, or other costs. Financial intermediaries who receive such payments have an incentive to recommend PIMCO's Model Portfolios over other managers' model portfolios, which creates conflicts for the recipients(s) of such payments. In addition, PIMCO has retained a third-party wholesale firm that is compensated to market the Models to financial professionals at various financial intermediaries, as directed by PIMCO. Similarly, with respect to investment consultants we may engage from time to time, as described above, if any referral arrangements existed between PIMCO and such consultants, we would require the consultant to disclose to clients any compensation they receive for their referrals.

ITEM 15. Custody

We do not act as a custodian for Client assets. However, under the Advisers Act, PIMCO may, as described further below, be deemed to have constructive custody of Client assets in certain instances.

In the case of Registered Funds and Private Funds advised by PIMCO, such Funds have made arrangements with qualified custodians as disclosed in the relevant offering and other Fund documents.

In the case of Separate Accounts, appointment of a custodian is a prerequisite to PIMCO's management of Client assets. Clients must select and appoint their own custodian, whose services and fees will be separate from our fees. As a general matter, clients are responsible for independently arranging for all custodial services, including negotiating custody agreements and fees and opening custodial accounts. We have a process to confirm that custodians selected by Separate Accounts satisfy the requirements applicable to qualified custodians. Under a Client's investment management agreement, PIMCO's authority is generally limited to trading authority with respect to the Account in the

instruments and subject to the investment limits as specified in the investment management agreement. Notwithstanding anything in a Client's custody agreement with a third-party custodian that purports to give PIMCO powers that may be construed as custody over such Client's assets, PIMCO typically unilaterally disclaims such authority in order to avoid being deemed to have custody over such assets. For Separate Accounts where we may be deemed to have constructive custody with regard to the payment of fees or Clients have authorized PIMCO to debit fees from their Accounts, we confirm on an annual basis that each Separate Account's custodian sends required periodic account statements. Certain Clients will authorize PIMCO to direct their custodian to transfer Account assets to specific third-party accounts pursuant to letters of authorization. PIMCO will not be liable for a custodian's failure to properly implement such transfers. In these instances, PIMCO will implement policies and procedures reasonably designed to comply with applicable law and regulatory guidance applicable to such arrangements.

Whether PIMCO is deemed to have custody or not, if a Separate Account Client does not receive its custodian statements, the Client should contact its PIMCO account representative, and we will work with the Client and the Client's custodian to ensure that the Client receives this information. Clients should carefully review their custodian statements to ensure they reflect appropriate activity in their Account. Separate Accounts may also receive statements from PIMCO. Clients should compare the account statements that they receive from their qualified custodian with those that they receive from PIMCO.

If there are discrepancies between a Client's custodian statement and their PIMCO account statement, Clients should contact their custodian or PIMCO account representative for more information.

Consistent with PIMCO's policies and procedures, certain types of Client assets may not be held through a custodian and instead ownership records may be kept by the issuer or agent. In other cases, investments may be certificated and may be evidenced by agreements or

instruments which may be difficult or impossible to custody. These custody issues are more common for alternative investments.

In the case of Wrap Programs where the Wrap Program Client contracts with the Sponsor and not with PIMCO, PIMCO typically will not be deemed to have custody of such Wrap Program Client assets, although under certain fee payment arrangements for such Wrap Programs, PIMCO could be deemed to have constructive custody of Wrap Program Client assets. In such circumstances, PIMCO confirms on an annual basis that the relevant custodian sends required periodic account statements.

From time to time, PIMCO will advise that certain Wrap Program Clients or Direct Managed Account Clients establish brokerage accounts at certain custodial institutions with whom we have a relationship, to maintain custody of clients' assets and to effect trades for their Accounts, but that decision is solely that of the Client. Clients should carefully review their custodian statements to ensure they reflect appropriate activity in their Account.

ITEM 16. Investment Discretion

PIMCO provides discretionary investment management services to a Client only if the Client or its agent and PIMCO have signed a written investment management agreement or other document showing the Client's grant of discretion or other authority for its portfolio. PIMCO generally receives discretionary authority from Clients (or a Client's agent, such as the Sponsor in the context of Discretionary Wrap Programs) to select, and to determine the quantity of, securities or financial instruments to be bought or sold for the Client's portfolio. In exercising its discretionary authority to make investment decisions for a Client's portfolio, PIMCO adheres to the investment policies, limitations and restrictions of the portfolio. For Wrap Program Accounts, PIMCO's discretionary authority is limited by the selected mandate's investment strategy and can be further limited by reasonable, client-imposed restrictions, as described in Item 4. With respect to certain Accounts, such as Registered Funds, PIMCO's authority to trade securities may also be limited by certain securities, tax,

and other laws that may, for example, require diversification of investments and impose other limitations.

Unless otherwise instructed by a Client, PIMCO typically utilizes Agency Ratings for purposes of credit quality limitations or, in the absence of such ratings, Internal Ratings or Implied Ratings. Some Clients authorize PIMCO to utilize Internal Ratings as a primary credit quality source. In such instances, a Client may allow PIMCO to invest in securities or financial instruments that have Agency Ratings that are lower than those permitted by the Client's guidelines (if the Internal Rating is higher than the Agency Rating).

As discussed in Item 4, "Non-Discretionary Services," PIMCO also furnishes investment management services to some Clients on a non-discretionary basis, which may include, without limitation, evaluation and risk assessment of Client portfolios.

ITEM 17. Voting Client Securities

PIMCO's Proxy Voting Policies and Procedures

PIMCO has adopted a written proxy voting policy (the "Proxy Policy") as required under the Advisers Act.

It is PIMCO's policy to exercise any voting or consent rights with respect to securities held in accounts over which PIMCO has discretionary voting authority consistent with PIMCO's fiduciary obligations and applicable law. PIMCO shall neither have nor accept any right or authority to vote proxies with respect to securities on loan pursuant to a securities lending arrangement between a Client and the Client's custodian, unless PIMCO accepts express contractual authority over the client's securities lending activities and this authority includes the ability to recall leased securities). Each proxy is voted on a case-by-case basis, taking into account relevant facts and circumstances in the best interest of the Client. When considering Client proxies, PIMCO may determine not to vote a proxy in certain circumstances in accordance with its fiduciary duties or its agreement with a Client. Additionally, there may be operational circumstances that prevent PIMCO's proxy voting elections from being processed, and in such

circumstances, PIMCO will take reasonable steps to submit votes on behalf of clients.

PIMCO has retained an Industry Service Provider ("ISP") to provide research and voting recommendations for proxies relating to equity securities in accordance with the ISP's guidelines. In furtherance of its fiduciary obligations, PIMCO performs due diligence and oversight of the ISP, which includes, but is not limited to, the periodic evaluation and review of the ISP's capacity and competency to provide research and voting recommendations, the ISP's process for seeking timely input from issuers, voting methodologies, and the ISP's policies, procedures and practices, including those regarding conflicts of interest. By following the guidelines of an independent third-party, PIMCO seeks to mitigate conflicts of interest PIMCO could have with respect to proxies covered by the ISP. PIMCO can determine to override the ISP's voting recommendation. In such cases or when the ISP does not provide research or a voting recommendation, PIMCO will review the proxy to determine whether a conflict of interest, or the appearance of one, exists. PIMCO will also consider relevant facts concerning the relationship between the ISP and an issuer, and evaluate additional information that may become available from the ISP regarding a particular proxy event, including additional information from the issuer, before providing a vote recommendation.

Fixed income securities can be processed as proxy ballots or corporate action-consents at the discretion of the issuer/custodian. When processed as proxy ballots, the ISP generally does not provide a voting recommendation, and its role is limited to election processing and recordkeeping. When processed as corporate action-consents, PIMCO will review all election forms to determine whether a conflict of interest, or the appearance of one, exists with respect to the PM's consent election. PIMCO's Credit Research and Portfolio Management Groups are responsible for providing recommendations on how to vote proxy ballots and corporation action-consents with respect to fixed income securities.

PIMCO will vote client (including ERISA Accounts) proxies relating to an interest in a Fund in accordance with the offering or other disclosure, or governing documents or any applicable contract for the Account holding shares of the Fund. Where such documents are silent on the issue, PIMCO will generally vote client proxies relating to an interest in a Fund by "echoing" or "mirroring" the vote of the other shareholders in the underlying Fund, or by applying other appropriate methods in the Policy, unless such practice is prohibited by law, regulation, or the contractual arrangements between the Account and PIMCO.

The Proxy Policy permits PIMCO to seek to resolve or mitigate material conflicts of interest by pursuing any one of several courses of action. With respect to material conflicts of interest between PIMCO and an Account, the Proxy Policy permits PIMCO to either: (i) convene a working group to assess and resolve the conflict (the "Proxy Working Group"); or (ii) vote in accordance with protocols previously established by the Proxy Policy, the Proxy Working Group and/or other relevant procedures approved by PIMCO's Legal and Compliance department with respect to specific types of conflicts. These conflicts can favor one Client over another, or favor PIMCO over a Client. This may also result in PIMCO exercising proxies or consents for some Clients in a different manner than it does for other Clients. Similarly, PIMCO may exercise investment decision consents differently for some Clients than for others. For additional information regarding such potential conflicts, please see Item 11, "Code of Ethics, Participation or Interest in Client Transactions and Personal Trading." PIMCO will supervise and periodically review its proxy voting activities and the implementation of the Proxy Policy.

Except as required by law, PIMCO will not disclose to third parties how it voted on behalf of a Client. However, upon request from an appropriately authorized individual, PIMCO will disclose to its Clients how PIMCO voted such Client's proxy. In addition, a Client may obtain copies of PIMCO's Proxy Policy and information as to how its proxies have been voted by contacting PIMCO.

Sub-Adviser Engagement

As an investment manager, PIMCO may exercise its discretion to engage a sub-adviser to provide portfolio management services to certain Accounts. Consistent with its management responsibilities, the sub-adviser will assume the authority for voting proxies on behalf of PIMCO for these Accounts. Sub-advisers may utilize third parties to perform certain services related to their portfolio management responsibilities. As a fiduciary, PIMCO will maintain oversight of the investment management responsibilities performed by the sub-adviser and contracted third parties.

Alternative Proxy Voting Arrangements

With respect to those Client portfolios for which PIMCO is not authorized to vote proxies or give consents in connection with corporate actions, including with respect to securities contributed in-kind to an Account by Wrap Program Clients, such Clients should arrange to receive proxy solicitation materials directly from their custodian. If Clients have questions with respect to a particular proxy solicitation, please contact your PIMCO account representative. In certain Wrap Programs, PIMCO will not be delegated the responsibility to vote proxies held by the Wrap Program Accounts and, instead, the Sponsor or another service provider will generally vote such proxies. Clients in such Wrap Programs should contact the Sponsor for a copy of the Sponsor's proxy voting policies.

ITEM 18. Financial Information

Because PIMCO does not require or solicit prepayment of more than \$1,200 in fees per Client six months or more in advance, this item is inapplicable.

Appendix A Principal Owners

The following affiliated entities own 25% or more of PIMCO directly or indirectly.

Principal Owner of PIMCO	Entity in Which Interest is Owned
Allianz SE (publicly-held company)	Allianz Europe B.V.
Allianz Europe B.V.	Allianz of America Inc.
Allianz of America Inc.	Allianz Asset Management of America LLC
Allianz Asset Management of America LLC	Pacific Investment Management Company LLC

Appendix B Fee Schedules

Our basic Separate Account fee schedules are listed below and are based on a percentage of an Account's assets. The fee schedules, which are subject to change, may be negotiated under certain circumstances. When determining fee rates, we will take into account, among other things, a Client's composite, strategy, account discretion, servicing levels and contracting counterparties. Fee rates are listed on a per annum basis. Clients may pay higher or lower fees than outlined below. The fee schedules for Direct Managed Accounts as well as Wrap Programs where we contract directly with a Wrap Program Client for advisory services (as opposed to a Wrap Program where our advisory fee is included within the Wrap Program fee) can be found after the Separate Account fee schedules as follows.

Appendix D Methods of Analysis and Investment Strategies

Introduction

PIMCO combines top-down macroeconomic forecasting with rigorous bottom-up credit analysis in its investment process. PIMCO's cyclical and secular economic forums drive the top-down element of the firm's investment process which begins with an annual secular forum in which investment professionals from all our offices convene. Industry experts give presentations on various global economic and financial topics, followed by discussions among PIMCO's investment professionals regarding the outlook for the global economy and interest rates over the next three to five years. At the completion of the discussions, the investment professionals collectively determine a bullish, neutral or bearish outlook. In addition to the secular three to five year horizon, PIMCO's investment professionals hold quarterly economic forums to discuss near term trends and to establish a cyclical outlook. The portfolio management group considers these outlooks in a separate quarterly meeting to translate global economic themes and specific views on market conditions and relative value into interest rate, sector, quality, and volatility strategies. PIMCO's bottom-up research on individual securities generally considers such factors as finances, credit quality, call risks and structures. Additionally, PIMCO is a signatory to the United Nations-backed Principles for Responsible Investment ("UNPRI"). The UNPRI recognize that ESG issues can affect the performance of investments and should therefore be given appropriate consideration by investors. Accordingly, PIMCO considers relevant ESG factors in its investment research process with the goal of enhancing our clients' risk-adjusted returns, including in Accounts that do not employ an ESG Investment Strategy. Integrating relevant factors into the evaluation process does not mean that ESG related information is the sole or primary consideration for an investment decision. PIMCO's portfolio managers and analyst teams consider a variety of factors including the materiality of those factors to make investment decisions. Where material, ESG factors are important considerations when evaluating long-term investment opportunities and risks for asset classes in both public and private markets, where applicable. The materiality of ESG considerations to investment decisions varies across asset classes, strategies, products and valuations. Individual PIMCO strategies are discussed below.

PIMCO also offers alternative strategies, primarily through private investment vehicles such as private equity funds and hedge funds. These strategies encompass long/short, private equity, private credit, distressed debt, commercial real estate and other alternative strategies. The details of these investment strategies can be found in the offering documents of the applicable private investment vehicles. PIMCO also provides a customized target date service to participating retirement plans using a proprietary methodology to construct various portfolios that include PIMCO-advised CITs. This strategy incorporates certain demographic factors to seek to assign more personalized investment allocations for plan participants of retirement plans that use the myTDF Models. The details of a CIT's investment strategies can be found in the CIT's declaration of trust, disclosure memorandum and/or other offering documents (as applicable). The details of a participating retirement plans' use of myTDF are available from the participating retirement plan.

I. Traditional Fixed Income Strategies

Convertible Bond Strategy portfolios seek to add value through in-depth fundamental credit

research and analytical modeling of equity options and warrants, within the context of our macro-economic forecasting process. We seek to

maintain a balanced risk/reward profile; emphasize modest participation with rising equity prices while shielding against significant declines; emphasize issues with capital appreciation potential and good credit fundamentals; diversify risk across multiple industries and sectors; and use an option-adjusted duration, which will typically not exceed three years. The portfolio's weighted average delta (a measure of the portfolio's sensitivity to changing equity values) will generally not exceed 70%.

We assess the value of convertible bonds by considering trends in demographics, political factors, and structural changes in the global economy refined by quarterly cyclical economic forecasts. We seek to identify companies with stable or improving credit fundamentals and prospects for improving equity prices by evaluating the strength and predictability of each company's cash flow, the quality of assets, the strength of the management team, the company's competitive stance and financial flexibility, and the covenants of the convertible security. Finally, we analyze the convertible's attached equity option or warrant using financial models. Traditionally, we limit investment in any given issuer to under 5% and in a single industry to under 15%. Although higher concentrations may provide enhanced relative performance in the short run, over our secular horizon, broad diversification seeks to add value without additional risk.

Investment-Grade Credit Strategy portfolios invest primarily in creditworthy corporate issuers having a debt rating of BBB-or greater by at least one of the nationally recognized credit rating agencies or, if unrated, determined by PIMCO to be of comparable quality. This strategy utilizes a disciplined approach in the credit selection process, as issuer and industry decisions will contribute meaningfully to the performance of the product. In addition to corporate bonds, the

strategy may invest in investment-grade sovereign bonds, as well as supranational issuers. While macroeconomic strategies that influence sector and industry decisions are important, bottom-up security selection will most likely be the primary driver of long-term performance.

PIMCO's credit strategy focuses on adding value through a disciplined approach to credit selection combined with top-down macroeconomic forecasts for region and sector rotation. PIMCO's philosophy and approach to global credit markets is consistent with our conservative, yet innovative, approach toward fixed income markets.

Specifically, the philosophy for investing in corporate and sovereign credit markets embodies three key principles:

- Major shifts in portfolio strategy are driven by longer-term or secular trends as opposed to short-term aberrations in market conditions.
- An emphasis is placed on adding value through combining bottom-up fundamental credit research with top-down macroeconomic analysis.
- Consistent investment performance is pursued by emphasizing independent research and prudent diversification with respect to industries and issuers.

The strategy is managed in the context of the PIMCO outlook for the global economy and markets, but investment decisions and value-added opportunities come primarily from traditional bottom-up credit analysis.

Credit Absolute Return Strategy uses a global approach to credit selection with a focus on generating attractive absolute returns without the constraint of a benchmark. In an effort to achieve this goal, the strategy's portfolio is constructed from PIMCO's best bottom-up corporate credit

ideas across investment grade, high yield, bank loans and other corporate securities. While the strategy is designed to adhere to PIMCO's investment philosophy and risk management process, it will have significant flexibility to increase and reduce its sensitivity to credit markets in an effort to achieve its absolute return objective in various market environments. Long term performance is expected to be driven both by macroeconomic strategies that influence sector and industry decisions and by bottom-up security selection. In periods when credit offers attractive relative value, for example, the strategy will likely have a greater exposure to the credit markets. In periods where credit spreads are likely to widen, the strategy would likely significantly reduce its sensitivity to credit markets through various hedging strategies and focus more on relative value between sectors in an effort to achieve its absolute return objective.

Total Return Strategy portfolios use a core bond strategy that seeks to maximize price appreciation and current income with index-like volatility. We use all major sectors of the bond market to implement a diversified set of strategies including sector rotation, yield curve positioning, and duration management. Duration is managed within a moderate range (between three and six years) around the broadest bond market indices. Our investment process uses both "top-down" strategies focused on duration, yield curve positioning, volatility, and sector rotation, and "bottom-up" strategies driving security selection process and facilitating the identification and analysis of undervalued securities.

The Dynamic Bond Strategy is an absolute return-oriented fixed income strategy that is not tied to a benchmark nor has significant sector/instrument limitations. The strategy is

designed to offer the traditional benefits of a core bond approach – capital preservation, liquidity and diversification – but with higher alpha potential and the opportunity to mitigate downside risk to a greater degree than what is reasonably possible from traditional active fixed income management approaches. The strategy focuses on long-term economic, social and political trends that may have lasting impacts on investment returns. Over shorter cyclical time frames, the strategy's guidelines allow us flexibility to take on more risk when we identify tactical opportunities, and it allows for reduction and diversification of risk when the outlook may be more challenging for traditional fixed income benchmarks.

II. Asset-Backed Strategies

The Mortgage SOFR Plus Strategy aims to generate consistent excess returns over a LIBOR benchmark with limited volatility through active cash management and relative value strategies in mortgages, governments and derivative instruments. The strategy seeks to capture relative value through long/short strategies by opportunistically extracting value from structural and tactical market mispricings. While we emphasize agency pass-throughs, our mortgage investment process still looks to all segments of the vast MBS market to add value.

The Mortgage-Backed Securities Strategy emphasizes actively managed exposure to Agency MBS holdings. We seek securities that offer the highest total return potential for the lowest amount of risk. We take a multi-faceted approach to MBS valuation, with three major components:

- **Option-Adjusted Spread ("OAS"):** We use OAS modeling as a relative valuation tool when comparing securities, together with supplemental analysis.

- **Empirical Modeling:** Empirical modeling serves as a tool designed to systematically exploit market opportunities. Market prices can reflect prepayment information, and the extent of prepayment information embedded in market prices combined with the liquidity of MBS make empirical analysis a useful tool.
- **Technical Analysis:** The major MBS investors, such as banks, mortgage servicers and insurance companies, are often driven by accounting motives rather than value. As a total return value investor PIMCO seeks to profit from this type of trading.

III. Duration Strategies

Our duration philosophy is founded on the principle of diversification, and we seek to maximize total return, consistent with the preservation of capital. PIMCO focuses on credit analysis by performing country, industry, company and issue analysis to determine which credits to add to the clients' portfolios. We limit risk taking by focusing on managing excess return versus tracking error, seeking to minimize the volatility of portfolios' excess returns in relation to their benchmarks.

Long Duration/Long Credit Strategy portfolios are primarily composed of long-term investment grade credit fixed income securities that seek to maximize total return, consistent with the preservation of capital and prudent investment management. The strategy utilizes a disciplined approach in the credit selection process and focuses on credits demonstrating solid or improving fundamentals, as issuer and industry decisions will contribute meaningfully to the performance of the product. In addition to long-term corporate bonds, the credit universe includes long-term investment grade sovereign bonds, as well as supranational issuers. While

macroeconomic strategies that influence duration, sector and industry decisions are important, bottom-up security selection will most likely be the primary driver of long-term performance.

Moderate Duration Strategy portfolios are intermediate core portfolios that seek maximum total return through both current income and price appreciation, consistent with the preservation of capital and prudent risk taking. We utilize all major sectors of the bond market while managing an average portfolio duration ranging between two and five years. This strategy seeks to consistently add value, while maintaining an overall risk level similar to the Barclays Capital Intermediate Government/Credit Index.

Low Duration Strategy portfolios seek low volatility of returns and minimal credit risk without sacrificing liquidity. Low duration strategies invest within a diversified range of fixed income securities while maintaining average portfolio duration of one to three years under most market conditions. The strategy extends duration beyond traditional money market and short-term vehicles to develop a greater opportunity set from which to invest. The Low Duration strategy focuses on the higher yielding sectors while attempting to maximize expected total return.

IV. Enhanced Equity Strategies

PIMCO offers two broad styles of equity solutions. First, StocksPLUS combines passive index replication with alpha from fixed income markets. Second, equity strategies that are sub-advised by Research Affiliates, a global leader in asset allocation and a pioneer in value equity and smart beta solutions.

PIMCO's investment philosophy for the StocksPLUS Strategy is based on the principle that equity swaps and futures, when used to obtain

long-term equity exposure, offer an attractive means for seeking to enhance equity market returns. As the equity swaps/futures that capture the returns of the equity exposure typically require very little capital, the majority of the cash that an investor allocates to the strategy is available to be invested in a bond alpha strategy. This bond alpha strategy is designed to capitalize on PIMCO's experience in active fixed income management. The StocksPLUS strategies may appeal to investors for the following reasons:

- **Magnitude of excess returns:** Drawing on PIMCO's core competencies, the enhanced equity approach benefits from tapping into structurally based sources of alpha that allows PIMCO to achieve a reasonably high magnitude of excess returns which we believe may be particularly attractive to clients.
- **Consistency of outperformance:** The combination of passive replication of equity exposure and independent, structurally based alpha strategies allows us to outperform the market with a high degree of consistency over three-year periods.

StocksPLUS AR Strategy combines the absolute return bond alpha strategy described above with traditional, capitalization weighted index exposures.

StocksPLUS is the original version of enhanced equity at PIMCO and combines a short duration fixed income portfolio with capitalization weighted index exposures. StocksPLUS is designed to appeal to clients seeking modest excess returns with low tracking error.

StocksPLUS Long Duration is an additional specialty strategy, in which capital not deployed to equity index exposures is invested in a long duration style bond portfolio.

PIMCO also offers equity strategies in partnership with Research Affiliates, a global leader in asset allocation strategies and a pioneer in value equity and smart beta solutions. The Research Affiliates Equity ("RAE") strategy builds on Research Affiliates' groundbreaking work on Fundamental Indexation by adding additional enhancements and active insights utilizes fundamental weighting and a quantitative rules-based approach to equity investing.

PIMCO's RAE Strategies are sub-advised by industry pioneer Research Affiliates and seek to provide meaningful excess returns at bottom quartile fees. RAE is a rules-based, systematic, active approach to value investing with a long-term record of outperformance and consistency. The strategy seeks to provide the following potential benefits:

- **Captures robust sources of excess returns:** RAE is a systematic strategy that selects undervalued stocks using valuation metrics designed by Research Affiliates, while also incorporating quality and momentum signals to improve performance. The RAE strategy combines several well-researched measures of each signal to achieve higher returns over time.
- **Capitalizes on market inefficiencies:** Selected stocks are weighted based on fundamental measures of company size such as sales, cash flows, dividends and book value. This weighting methodology allows the fund to capitalize on market inefficiencies by systematically buying low and selling high and benefit from long-term mean reversion in stock prices.
- **Offers the benefits of a systematic equity strategy:** The strategy's unique rules-based approach seeks a consistent investment process, and a contrarian portfolio designed to deliver market outperformance.

RAFI Research Affiliates Fundamental Index (RAFI) is an investment approach that seeks to systematically rebalance portfolio weights back to fundamental size, allowing mean reversion to drive returns. RAFI Dynamic Multi-Factor ETFs incorporate smart beta research from Research Affiliates and seek to provide diversification and structural sources of returns through an in-depth methodology designed to introduce a buy-low, sell-high discipline to factor investing. The strategy offers the following potential benefits:

- Exposure to multiple equity factors that theory and research have linked to higher returns, a combination intended to offer less variance than single factor approaches.
- Stocks in each factor portfolio are weighted by fundamental measures such as company size, breaking the link between price and portfolio weight.
- A dynamic weighting process that overweights factors that may be more attractive on a forward-looking basis, reducing the potential risk associated with buying expensive factors.

V. Global Bond Strategies

PIMCO offers a number of developing markets, emerging markets, and global strategies. PIMCO's approach to global bond investing has three key principles:

- Multiple Strategies. We employ multiple concurrent strategies and take only moderate risk in each, thereby seeking to reduce risk of poor performance arising from any single source. Strategies utilized include duration management, yield curve or maturity structuring, sector rotation and all bottom-up techniques using our in-house credit and quantitative research.
- Long-Term Orientation. We maintain a disciplined focus on our secular views to better identify long-term value and prevent our trading decisions from being overly influenced by emotion and short-term market sentiment.
- Broad Universe. We select from a broad universe that includes all conventional fixed income sectors as well as newer, less traditional sectors, PIMCO considers a developing market to be any non-U.S. country, excluding those countries that have been classified by the World Bank as high-income Organization for Economic Cooperation and Development ("OECD") economies. PIMCO may consider additional countries as developing market countries, based on a broader assessment on their development stage. Our emerging markets and developing markets strategies emphasize high quality countries that offer the most attractive risk-adjusted-return opportunities over a market cycle. We seek to avoid countries with a high risk of default or credit deterioration. The following key principles guide our disciplined investment process:
 - Favor countries with strong or improving underlying fundamentals, attractive valuations, and potential return catalysts.
 - Synthesize PIMCO's top-down macroeconomic forecasts with individual country assessments to gauge risks from the external environment and global economy.
 - Avoid countries that lack an economic and policy framework supportive of their fundamentals as well as those that are susceptible to a de facto deterioration in credit quality or financial contagion due to imbalanced market technicals.
 - Complement fundamental analysis with a rigorous security selection process to both

ensure consistency between views and portfolio positioning and take advantage of relative value opportunities across and within markets.

The Emerging Local Bond Strategy invests primarily in fixed income instruments denominated in the currencies of the emerging markets using processes similar to the Emerging Markets Bond Strategy.

The Emerging Markets Bond Strategy uses a multi-step process to guide our emerging markets investment decisions. First, we identify countries' underlying credit fundamentals (including favoring strong fiscal positions, stable/improving political situations, comfortable reserve levels, and debt profiles that can withstand financial shocks, among others). We then consider the impact of our global outlook on these countries, including prospects for demand from advanced economies, commodity prices, interest rate trends and other components of the external environment. Finally, we evaluate the technical conditions of the credit to identify both the upside and the imbalances that could potentially lead to market dislocations. This process provides the basis for our country weighting, duration, curve, currency and instrument selection decisions, as well as relative value assessments.

Emerging Markets Corporate Bond Strategy is designed for investors seeking to capitalize on the secular factors which favor a strategic allocation to emerging markets more generally: their rising contribution to global economic activity and a trend improvement in creditworthiness. Continued growth--a high priority--will require investment, particularly in infrastructure. In addition, as emerging country governments seek to utilize the fiscal credibility, they have built over the past decade to preserve growth amidst a global recession, their fiscal stimulus measures have been largely directed at infrastructure. This suggests

that the strategy may benefit further from cyclical forces currently at work in emerging markets.

Emerging markets infrastructure bonds, used tactically, seek to increase performance within both core total return type bond portfolios and dedicated emerging markets accounts. Strategically, the characteristics of emerging markets infrastructure bonds complement traditional asset classes in terms of alpha generation, while providing the additional benefit of diversification.

The Global Advantage Strategy is designed to help fixed-income investors seize opportunities produced by dramatic secular shifts in the global economy. The strategy invests in fixed-income securities from both developed and developing markets and is benchmarked to the proprietary PIMCO Global Advantage Bond Index (GLADI™), a GDP-weighted index intended to offer investors an improved fixed-income market "beta."

The Global Bond Strategy is designed to help fixed-income investors seize opportunities produced by dramatic secular shifts in the global economy. The strategy invests in fixed-income securities from both developed and developing markets and is benchmarked to the proprietary PIMCO Global Advantage Bond Index (GLADI™), a GDP-weighted index intended to offer investors an improved fixed-income market "beta."

VI. High Yield Strategies

High Yield and High Yield Spectrum Strategies seek to lower portfolio volatility while enhancing returns by investing in below-investment grade fixed income securities. Our global fixed income philosophy embodies these key principles:

- Bottom-up credit research incorporating top-down economic framework.
- Total return approach, not just yield focused.

- Focus on credits with best risk/return profile.
- Seek to limit risk through issuer and industry diversification.

In addition, the High Yield Spectrum Strategy focuses on global credit opportunity set resulting from expertise in many regions and credit sectors. PIMCO's credit analysts focus on: 1) business model 2) cash flow 3) balance sheet, and 4) security structure. The specific metrics and financial ratios will vary based on the industry and as a result the format of reporting the analysis will also vary. In addition, emphasis on the four factors listed above will also depend on the industry.

VII. Income Strategies

The Diversified Income Strategy is a multi-sector strategy that invests across a broad spectrum of credit market sectors including global corporate credit both in investment grade and high yield, and emerging market debt. The allocation among each of these markets will vary based on PIMCO's assessment of global trends and relative valuations. This active and dynamic approach allows for increased responsiveness in asset allocation to changing economic and market conditions while remaining anchored by PIMCO's investment process and longer-term orientation. The ability to invest globally helps to improve diversification and may allow investors to benefit from differences in business cycles across regions and credit quality trends across credit sectors.

VIII. Short-Term Strategies

PIMCO's Short-Term strategies seek to enhance short term yields with a diversified portfolio of high quality money market and other short maturity, fixed income investments. Emphasis is on principal preservation and maintaining liquidity.

The Government Money Market Strategy traditionally invests in short-term, high-quality

fixed income securities issued by the U.S. government or its agencies. These include Treasury notes and bills, agency debentures and discount notes, and repurchase agreements collateralized by these securities. Our government money market investment strategy combines a simple core investment philosophy, extensive research analytics, and a highly effective decision-making process. We have traditionally used internal modeling and our knowledge of broad market sectors, both domestic and non-U.S., to construct portfolios consistent with client return and volatility objectives. To contain relative performance volatility, we have attempted to manage portfolio return volatility to approximate that of an associated benchmark.

The Short-Term Strategy is designed to improve on the return provided by a typical money market vehicle. The strategy invests in high quality money market and short maturity fixed income securities and also may invest a very modest portion of the portfolio in global securities issued outside of the U.S. and can have non-U.S. dollar currency exposure. It differs from traditional money market strategies because it invests in longer maturities and a broader opportunity set of securities which may generate excess relative returns with only a modest increase in risk compared to traditional money market instruments.

U.S. Government Short-Term portfolios of varying maturity ranges that are designed to help investors meet liquidity needs.

IX. Municipal Bond Strategies

We manage municipal bond portfolios with the same core investment process used for all of our strategies: maximize after-tax total returns; minimize tax liabilities; use a longer-term horizon for decision making; employ extensive risk

analytics; and emphasize multiple value-added techniques.

We customize our analytics for municipal-specific factors, such as municipal yield volatility, call option costs, and tax exposures. We concentrate on relative value opportunities across global debt sectors, selecting the most fairly valued securities. We seek to hold well-structured municipal bonds, being compensated appropriately for risks relating to calls, credit quality, liquidity, tax liabilities, and market supply-demand conditions. We avoid undue reliance on a limited set of strategies, which could lead to greater return volatilities and large tracking errors relative to the stated benchmark.

We offer a variety of municipal bond strategies and custom solutions including the following municipal bond strategies: California, High Yield, National, New York, Short Duration, and Tax-Managed Real Return.

National Municipal Bond Strategy portfolios seek to generate and retain a competitive after-tax rate of interest income. A secondary, and important, goal is to generate long-term capital appreciation, consistent with capital preservation.

Short Duration Municipal Bond Strategy portfolios are designed to be appropriate for investors seeking tax-exempt income. The strategy consists of a diversified portfolio of primarily short duration, high credit quality municipal bonds that carry interest income that is exempt from federal tax and in some cases state tax.

X. Real Asset Strategies

Real Return Strategies incorporate real assets that have a positive correlation to inflation. These assets diversify traditional stock and bond holdings, which historically have not performed well in higher inflationary environments. The key real assets we focus on are: TIPS and global inflation-linked

securities; commodities, which historically have provided both diversification and inflation hedging; and real estate, with a focus on securitized real estate. All of PIMCO's real return products rely on our core competency in fixed income management, with the objective of maximizing real return while seeking preservation of the real capital of a portfolio.

Commodities-Based Strategies use indices that calculate the returns to a hypothetical portfolio that contain only long positions in commodity futures contracts, passively managed, on a fully collateralized basis. The index represents holding positions according to a set of rules that we passively administer. These rules typically require that commodities that are more important in world trade have greater weight in the index. The index also assumes that positions are consistently rolled forward, so that the investor seeking index-like returns is always exposed to changes in the expected future prices of the actual commodities. Moreover, the index assumes unleveraged investment. Finally, a commodity index captures return from multiple sources, including the return on assets that collateralize the futures positions and the price risk assumed by long positions in commodity futures markets that commodity producers seek to avoid. Exposure to commodity indices is obtained through positions in commodity interests, which may consist of swaps, baskets of futures contracts or options on futures contracts designed to replicate the index.

The Diversified Real Asset Strategy seeks to gain strategic exposure to TIPS, commodities, and real estate. These asset classes individually and collectively achieve the goals of diversification and inflation-hedging. Diversified Real Asset provides actively managed, strategic exposure to these real return asset classes by tracking a benchmark that is composed of 40% Bloomberg U.S. TIPS Index,

25% Bloomberg Commodity Index, and 35% Dow Jones U.S. Select REIT Index.

Global Real Return Strategies include several types of non-U.S. inflation-adjusted products.

Real Estate Strategies seek to capture the performance potential of real estate through investing in derivatives on the Dow Jones U.S. Select Real Estate Investment Trust (REIT) Index or individual REIT securities. Investments in real estate-linked derivative instruments may subject the portfolio to greater volatility than investments in traditional securities. We attempt to enhance this approach by fully collateralizing those derivatives, and then managing the collateral in a way that seeks to outperform the financing rate built into the derivatives. We back our REIT swaps with actively managed TIPS, which should provide an effective inflation hedge. With a longer duration than money markets, TIPS also provide a closer match to the longer duration of liabilities of most investors.

XI. Asset Allocation

The Global Multi-Asset Strategy invests in global equities, global bonds, diversified commodities and real estate. The strategy uses a differentiated “risk factor”-based approach to asset allocation and our strategic insight on the global macroeconomy to construct a portfolio that is highly diversified across asset classes and global risk factors. The strategy also uses “tail risk” hedging that seeks to protect the portfolio against sudden market shocks by purchasing inexpensive hedges across various liquid markets. The strategy features a qualitative, forward-looking asset allocation process.

Inflation Response Multi-Asset Strategy is designed to provide a comprehensive portfolio solution for investors seeking diversified exposure

to the broad opportunity set of inflation-related investments, including assets that respond to different types of inflation. These include TIPS, commodities, emerging market currencies, REITs, and gold. The strategy may also tactically employ floating rate securities in the event of deflation or extreme market shock. PIMCO actively manages the overall asset allocation as well as the underlying exposures in an effort to enhance returns relative to a static, passive approach. By combining these potential benefits, the strategy can serve as a compelling comprehensive investment for those seeking to not only hedge inflation, but also potentially benefit from inflation dynamics.

Tail Risk Strategy utilizes a long-only options-based hedge overlay portfolio to help clients mitigate downside risk. Tail Risk Hedges are typically bespoke portfolios designed to fit a client’s risk profile and can be constructed for traditional and non-traditional portfolios and for portfolios that contain assets, liabilities or combinations of the two.

XII. Other Strategies

Bank Loan Strategy portfolios invest primarily in the upper tiers of the U.S. bank loan market that are mainly secured by first-lien asset obligations but also may invest in second-lien debt at much more modest levels, when valuations relative to associated risks merit investment. We take a moderate approach with respect to risk in our bank loan portfolios, emphasizing three key principles: (1) higher-quality focus; (2) diversification; and (3) focus on improving credits. The loan selection process typically finishes with thorough, traditional, fundamental credit research on companies within the industries we find attractive, which may include on-site visits.

PIMCO Absolute Return Strategy (“PARS”) is a fundamentally driven discretionary global macro hedge fund strategy. It is afforded significant flexibility in pursuit of its objective to deliver absolute returns. The strategy combines:

- Tactically implemented trades based upon PIMCO’s secular and cyclical macroeconomic insights.
- Opportunistic, conditional and relative value trades.
- Core: fixed income, credit, and currency exposures with opportunistic positions in equities and commodities.

In addition to the strategies discussed above, PIMCO also may, at the client’s request, employ a Tail Risk Strategy, described above, to help mitigate portfolio downside risk.

PIMCO TRENDS Managed Futures Strategy (“TRENDS”) is a systematic trend-following strategy that seeks to capture momentum across major asset classes including equities, interest rates, commodities, and currencies. It is designed to achieve positive, risk-adjusted returns with low correlations to traditional market risk factors (i.e. low equity beta), consistent with prudent investment management. The strategy follows a disciplined trading approach informed by PIMCO’s proprietary quantitative analytics and by PIMCO’s market knowledge. Additionally, the strategy draws upon our global trading platform and active fixed-income management to add additional sources of value.

TRENDS aims to deliver the following benefits:

- May reduce both portfolio volatility and drawdown while generating positive returns: Historically, managed futures have generated positive returns, low to negative correlations with risk assets and strong left tail performance.

- Seeks to provide positive returns in varying market environments: Because the strategy is able to establish long and short positions across a variety of asset classes, it has the potential to generate positive returns in any market environment.

PIMCO Multi-Asset Alternative Risk Premia Strategy (“MAARS”) is a systematic quantitative strategy that aims to isolate exposures to alternative risk premia such as value, carry, momentum, and risk aversion across major asset classes including global equities, fixed income, commodities, and currencies. It seeks to diversify risks that tend to dominate most portfolios (i.e. equity) by explicitly optimizing toward zero correlation with stocks and bonds at both the underlying strategy and overall portfolio levels.

MAARS combines:

- PIMCO’s global trading platform, and decades of experience generating value from alternative risk premia across traditional and alternative strategies
- A disciplined approach to selecting only those underlying strategies that have a rational economic underpinning for a positive risk premium to exist and persist over time, and can be implemented efficiently using highly liquid instruments
- Built-in risk management that accounts for changing market conditions, and reflects varying relative risk/return between our underlying strategies

In addition, PIMCO may also build—at the client’s request—custom portfolios of our underlying alternative risk premia strategies as defensive solutions tailored to meet specific risk objectives for their overall investment portfolios.

Stable Value portfolios are actively managed, diversified strategies that primarily invest in investment grade fixed income securities and a variety of stable value investment contracts issued by insurance companies, banks and other financial institutions. Contracts, such as wrap contracts, are intended to help reduce principal volatility of, while providing steady income from, associated fixed income investments. The average duration of a portfolio's investments will vary over time but will typically have an average duration of two to four years. The portfolio may also invest in cash or other liquid investments, such as a short-term investment-fund, to help meet portfolio liquidity needs.

Sustainable Investment Solutions. We have developed a suite of sustainable investment solutions for clients seeking risk-adjusted returns and the explicit inclusion of sustainable factors in the investment selection process. Our sustainable investment solutions are organized into three categories: exclusionary, enhanced and thematic.

Exclusionary strategies restrict a portion of the investment universe by excluding issuers misaligned with specific sustainability factors as defined by a client's investment objectives.

Enhanced strategies are designed to target a better overall ESG profile than their investment universe. In the context of our ESG Enhanced strategies, PIMCO's investment process for commingled fund offerings applies the following guiding principles, which can also be applied to separately managed accounts:

- **Exclude:** We exclude issuers fundamentally misaligned with sustainability factors, which may be customized for client preferences in separately managed accounts.
- **Evaluate:** Using our proprietary and independent ESG scoring system as one factor in portfolio construction, in addition to externally sourced and internally developed criteria, we seek to optimize ESG portfolios to emphasize companies in each industry and more generally issuers with certain ESG practices, limited carbon footprint and/or high-quality sustainable bond frameworks in order to target higher aggregate ESG scores and/or criteria for these portfolios.
- **Engage:** Our analysts engage with issuers with the objective of improving investment outcomes. For ESG optimized portfolios, we believe that by allocating capital toward issuers willing to improve their ESG-related business practices, informed by our engagement activity, may have more influence than excluding issuers with poor ESG metrics and favoring those with strong metrics. We conduct engagement based on ESG themes that the firm believes have the most opportunity to reduce risk or capitalize on investment opportunities for each specific issuer.

Thematic strategies build on the Enhanced strategies approach and are designed to incorporate a specific environmental and/or social objective or outcome in addition to their financial objectives.

Appendix E PIMCO Client Privacy Policy

PIMCO considers customer privacy to be a fundamental aspect of its relationship with clients. PIMCO is committed to maintaining the confidentiality, integrity, and security of its current, prospective and former clients (collectively “clients”) non-public personal information. PIMCO has developed policies that are designed to protect this confidentiality, while allowing client needs to be served.

In the course of providing its clients with products and services, PIMCO and certain of its service providers may obtain non-public personal information about its clients. This information may come from sources such as account applications and other forms, from other written, electronic or verbal correspondence, from client transactions, from client brokerage or financial advisory firm, financial adviser or consultant, and/or from information captured on applicable websites.

As a matter of policy, PIMCO does not disclose any non-public personal information provided by its clients or gathered by PIMCO to non-affiliated third parties, except as required or permitted by law or for PIMCO’s everyday business purposes, such as to process transactions or service a client account. As is common in the industry, non-affiliated companies may from time to time be used to provide certain services, such as preparing and mailing prospectuses, reports, account statements and other information, conducting research on client satisfaction, and gathering shareholder proxies. PIMCO (or its affiliates) may also retain non-affiliated companies, to market its products, and may enter into joint marketing arrangements with them and other companies. These companies may have access to client personal and account information but are permitted to use the information solely to provide the specific service or as otherwise permitted by law. PIMCO may also provide client personal and account information to their brokerage or financial advisory firm and/or to their financial adviser or consultant.

PIMCO reserves the right to disclose or report personal or account information to non-affiliated third parties in limited circumstances where PIMCO believes in good faith that disclosure is required under law, to cooperate with regulators or law enforcement authorities, to protect its rights or property, or upon reasonable request by any of its mutual funds in which clients have invested. In addition, PIMCO may disclose information about a client or their accounts to a non-affiliated third-party at their request or if the client consents in writing to the disclosure.

PIMCO may share client information with its affiliates in connection with servicing a client account, and subject to applicable law may provide a client with information about products and services that PIMCO or its affiliates believe may be of interest to the client. The information that PIMCO may share may include, for example, information about PIMCO’s or its mutual funds’ experiences and transactions with a client, their participation in its mutual funds or other investment programs, their ownership of certain types of accounts (such as IRAs), information captured on applicable websites, or other data about their accounts, subject to applicable law. PIMCO’s affiliates, in turn, are not permitted to share client information with non-affiliated entities, except as required or permitted by law.

PIMCO takes seriously the obligation to safeguard a client’s non-public personal information. In addition to this policy, PIMCO has implemented procedures that are designed to restrict access to a client’s non-public personal information to its personnel who need to know that information to perform their jobs, such as servicing a client’s

account or notifying a client of new products and services. Physical, electronic, and procedural safeguards are in place to guard a client's non-public personal information.

Information Collected From Websites

PIMCO and its service providers and partners collect information from clients and website visitors via websites maintained by PIMCO. The information collected via PIMCO's website includes client non-public personal information, which is used and shared in accordance with this Client Privacy Policy.

From time to time, PIMCO may update or revise this privacy policy. If there are changes to the terms of this privacy policy, documents containing the revised policy on the relevant website will be updated.

FORM ADV PART 2B: BROCHURE SUPPLEMENT

Supervised Person: Mr. Daniel He

Contact Information: Pacific Investment Management Company LLC
650 Newport Center Drive
Newport Beach, California 92660
949-720-6000
949-720-1376 (Facsimile)

Date of Brochure Supplement: April 1, 2025

This brochure supplement provides information about Mr. He that supplements the Pacific Investment Management Company LLC (“PIMCO”) brochure. You should have received a copy of that brochure. Please contact a PIMCO Compliance Officer at 949-720-6000 if you did not receive PIMCO’s brochure or if you have any questions about the contents of this brochure supplement.

Item 2: Educational Background and Business Experience

Daniel He (born 1981) is an executive vice president and portfolio manager in the Newport Beach office. He is currently a member of the liquid products group specializing in real return and mortgage-backed securities and serves as a member of Americas portfolio committee. Previously, he was a member of the global rates desk focusing on government bonds, foreign exchange, and interest rate derivatives. Prior to joining PIMCO in 2011, he structured and traded derivative strategies in foreign exchange and interest rates for a global macro hedge fund in Singapore. He has 17 years of investment experience and holds an MBA from the University of Chicago Booth School of Business. He also holds a master’s degree in financial engineering and an undergraduate degree in computer science from the National University of Singapore.

Item 3: Disciplinary Information

Mr. He has no reportable disciplinary history.

Item 4: Other Business Activities

Mr. He is not actively engaged in any other investment-related business or occupation.

Item 5: Additional Compensation

Mr. He receives no additional compensation for providing advisory services to PIMCO’s clients.

Item 6: Supervision

While your portfolio manager is responsible for managing the individual investments in your account, PIMCO’s Investment Committee is responsible for developing key portfolio strategies that are implemented across PIMCO’s account base. This process is led by PIMCO’s Group Chief Investment Officer, Daniel J. Ivascyn, with the assistance of PIMCO’s Chief Investment Officers (“CIOs”), who each oversee specific segments of assets. The team of five CIOs includes Andrew Balls (CIO Global), Mark R. Kiesel (CIO Global Credit), Mohit Mittal (CIO Core Strategies), Marc P. Seidner (CIO Non-traditional Strategies), and Qi Wang (CIO Portfolio Implementation). Your portfolio manager reports up to a CIO, who can be reached at 949-720-6000.

Item 7: Requirements for State-Registered Advisers

Not applicable.

FORM ADV PART 2B: BROCHURE SUPPLEMENT

Supervised Person: Mr. Michael Cudzil

Contact Information: Pacific Investment Management Company LLC
650 Newport Center Drive
Newport Beach, California 92660
949-720-6000
949-720-1376 (Facsimile)

Date of Brochure Supplement: June 3, 2025

This brochure supplement provides information about Mr. Cudzil that supplements the Pacific Investment Management Company LLC (“PIMCO”) brochure. You should have received a copy of that brochure. Please contact a PIMCO Compliance Officer at 949-720-6000 if you did not receive PIMCO’s brochure or if you have any questions about the contents of this brochure supplement.

Item 2: Educational Background and Business Experience

Michael Cudzil (born 1975) is a managing director and generalist portfolio manager based in the Newport Beach office. He is a rotating member of the PIMCO Investment Committee and co-chair of the Americas Portfolio Committee. As a portfolio manager across multi-sector fixed income mandates, Mr. Cudzil serves as co-lead of the liability-driven investment (LDI) portfolio management team, a senior member of the Total Return portfolio management team, and lead of the U.S. inflation portfolio management team. Prior to joining PIMCO in 2012, he worked as a managing director and head of pass-through trading at Nomura. He previously held similar roles at Bank of America and Lehman Brothers, as well as a senior trading position at Salomon Brothers. He has 28 years of investment experience and holds a bachelor's degree in political science from the University of Pennsylvania.

Item 3: Disciplinary Information

Mr. Cudzil has no reportable disciplinary history.

Item 4: Other Business Activities

Mr. Cudzil is not actively engaged in any other investment-related business or occupation.

Item 5: Additional Compensation

Mr. Cudzil receives no additional compensation for providing advisory services to PIMCO’s clients.

Item 6: Supervision

While your portfolio manager is responsible for managing the individual investments in your account, PIMCO’s Investment Committee is responsible for developing key portfolio strategies that are implemented across PIMCO’s account base. This process is led by PIMCO’s Group Chief Investment Officer, Daniel J. Ivascyn, with the assistance of PIMCO’s Chief Investment Officers (“CIOs”), who each oversee specific segments of assets. The team of five CIOs includes Andrew Balls (CIO Global), Mark R. Kiesel (CIO Global Credit), Mohit Mittal (CIO Core Strategies), Marc P. Seidner (CIO Non-traditional Strategies), and Qi Wang (CIO Portfolio Implementation). Your portfolio manager reports up to a CIO, who can be reached at 949-720-6000.

Item 7: Requirements for State-Registered Advisers

Not applicable.

Important Note for Retirement Clients / Accounts: The U.S. Department of Labor has granted Pacific Investment Management Company LLC (“PIMCO”) an individual exemption, PTE 2023-15, that enables PIMCO to continue managing retirement plan assets as a ‘qualified professional asset manager’ or ‘QPAM’ within the meaning of PTE 84-14. Pursuant to PTE 2023-15, covered plans have a right to obtain a summary of PIMCO’s policies developed in connection therewith. To request a copy of that summary, please email svc_erisa@pimco.com.
